

Solutions for retirement homes & healthcare establishments

Bedhead strips/Nurse call unit & Assistance with independent living

A major player in the services sector, with SELV solutions, emergency lighting, VDI, etc., Legrand has long had a presence in healthcare establishments.

Today it offers new innovative solutions around the concept of the room where energy performance, assistance with independent living, comfort and convenience for the staff and patient or resident are its key concerns.

Antimicrobial LED bedhead strips

Anti-extraction magnetic socket, for hand-held control device, integrated into the bedhead strip.

Digital connections within easy reach thanks to the RJ 45 socket integrated into the bedhead strip.

For retirement homes, specialised accommodation, etc.

Dynamic lighting with LED bedhead strips

Discover new comfort in the room with the LED bedhead strip. Visual comfort created by the light from the LEDs: softness and automatic variation of the indirect lighting, quality and contrasting of the direct lighting. And LEDs mean energy savings. An end to relamping! No maintenance for the lifetime of the bedhead strip. And that's not all: by playing on the lighting colours the LED bedhead strip can recreate the natural light cycle - dynamic lighting, which limits the appearance of time phase lags in the resident. Another innovation: all connectors integrated into the bedhead strip within easy reach. For connecting the lighting, connecting the nurse call unit, the telephone, the nurses' special equipment. Imagine the new level of convenience for the nurse at work. Think of the interpersonal facilities that are offered to the resident. And an antimicrobial treatment is applied to all surfaces for maximum hygiene.

Noon: white light

Morning: yellow/white light

Dynamic lighting allows the resident to stay in touch with concepts of day and night.

Evening: yellow/orange light

Antimicrobial medical bedhead strips

An alliance of different technologies:
magnetic socket of the hand-held remote
control unit and 2P+E power socket.

Connection of medical appliances with the Cat. 6A FTP socket.

Equipped bedhead (example)

For healthcare establishments such as: clinics, hospitals, etc.

Light and ergonomics

Combining ergonomics and aesthetics, the antimicrobial bedhead strip, connected to the trunking for gases, makes it easier to implement and maintain the systems: electricians and gas engineers can work separately. A true technological hub working for the patient's comfort and the convenience of the nursing staff. The bedhead strip, fitted with three luminaires, produces light that is suitable for each situation: room, reading, nursing. It also includes all the special connection sockets: hand-held remote control unit, nurse call unit, medical computer equipment, etc.

The bedhead strips comply with the EN 60598-1, EN 60598-2-25, EN 12464-1 standards.

The trunking complies with the FDS 90-155 standard.

Antimicrobial magnetic hand-held remote control unit

Legrand innovation: the magnetic connection allows ejection in all directions without damage.

Antimicrobial: hand-held remote control unit and cord

The patient can control the lighting, shutters, radio (switched socket) without moving thanks to the functions of the magnetic connection hand-held remote control unit.

Ejectable without extraction

Innovation: the hand-held remote control unit ejectable without extraction

The Legrand hand-held remote control unit is innovation in a nutshell. Ergonomic controls within easy reach for calling the nurse using a large red backlit button, as well as for controlling the light, roller shutters, etc. Connected to the bedhead strip via a magnetic socket it is ejectable in all directions without any risk of extraction. Its IP 67 properties and antimicrobial treatment guarantee its long life and make it easier to clean: exclusive to Legrand.

Antimicrobial BUS/SCS nurse call unit

1

The patient remains in continuous contact with the nursing staff thanks to the door unit located in the room. The associated interphone option can be used for initial remote vocal processing of the call, call acknowledgement, etc.

2

The corridor bulkhead light indicates the urgency of the call and the presence.

6

Call, presence, acknowledgement... the door unit contributes to the efficiency of the nursing staff.

5

The call is forwarded in real time to the nurse's DECT.

Free to do what they like, more available for patients: forwarding the nurse's call to the DECT allows the nursing staff to have the information in real time and to process calls with optimum efficiency.

3

Additional signalling with the alphanumerical corridor display: shows where the calls are coming from and their priority: room or bathrooms.

4

From the control unit, on a desk or on the wall, the nurse receives and manages call priorities. The nurse can also connect with colleagues in the rooms using the interphone option.

Linked directly to the DECT*

Efficiency and traceability

The nurse's call from a hand-held remote control unit is signalled on the door unit display installed in the rooms. It is relayed via the bulkhead light on the corridor side: wherever they are the nursing staff know who is calling and from where the call is coming, whether the bed or the bathrooms. The associated interphone unit can be used to reassure and acknowledge remotely, or to make a general call to all rooms with a nurse present. At the same time the information is displayed on the control unit installed in the central office and it can be transferred to the nurses' DECT: the information supplied directly to the rooms can be used to increase the nurses' efficiency. The system complies with standard VDE 834-1 and guarantees that events can be traced.

*DECT: Digital Enhanced Cordless Telephone

BUS/SCS: easy to configure

Installation by BUS/SCS of the door units and control units is made easier: just one BUS cable to be pulled. For small and medium-sized structures configuration can be completed by any electrical contractor.

Automatic lighting for assistance with independent living

Signalling bulkhead light with low-intensity lighting integrated into the bedhead strip.

The Mosaic automatic switch plays a role in assistance with independent living: it detects a presence and then orders a low-intensity lighting to be switched on which is reassuring but not blinding.

Illuminated bulkhead light on above the entrance to bathrooms.

A guarantee of safety: multiple detection angles.

Finding one's bearings in the room and the bathrooms at night

Finding one's bearings in the room at night

The spatial markers fade away when darkness sets in. A resident who is sitting at the edge of the bed can automatically trigger diffuse lighting in the room thanks to the automatic detectors installed approximately 30 cm off the ground. Several detection angles must be crossed in order for the system to work with maximum efficiency. The resident's path can be made easier by installing additional bulkhead lights and a signalling unit above the bathroom door - reassurance, dignity, independent living.

Automatic lighting in the bathrooms

The bathroom lighting provided via an infrared/ultrasonic detector allows the resident to move around in total safety: their presence and slightest movements are detected, whether they are in the toilets, in the shower or somewhere else.

The light goes off automatically when they leave the room.

Legrand innovation: the infrared/ultrasonic detector detects the resident's presence and slightest movements (for toilets, shower, etc.)

Monitoring of the room

Monitor behaviour in addition to providing assistance with autonomous living

For maximum efficiency among the nursing staff

All automatic detectors (room and bathrooms) are linked to a controller. Thanks to the field BUS/SCS, the controller sends all information emitted by the detectors related to the devices being switched on/off.

As such, using the actimetry software the nursing staff will be able to display and trace a resident's activity during the night in their room and in the bathrooms.

Option for controlling the lighting, shutters and ventilation

Monitoring the condition of the lighting, roller shutters, ventilation, etc. from the nurses' station. Option of controlling remotely from a PC.

The switch-on command issued by the bathroom detector is recorded and can be used to monitor how frequently the location is used.

The nurse can display residents' activity in their rooms and bathrooms from the computer in their own office.

Example:

- 22:30 the resident goes to bed.
- 22:45, the light goes out in the room.
- 00:10, the resident gets up.
- 00:11, they go into the bathroom.
- 00:35, light goes off in the bathroom and in the room.

Structured cabling for the room

The cat. 6A performance of the LCS² components (sockets) and connections (cords) have been validated by independent laboratory 3P Third Party Testing (see www.xxxxxx.xx VDI-LCS² system section)

Remote management & remote consultation

The VDI* infrastructure

Legrand's LCS² system can be used to exchange information for all applications (telephone, Internet, computer, images) from one part of the building to another from one shared network. Legrand offers a comprehensive and adaptable cat. 6A system, up to 10GB capacity, from the patch panel to the terminal sockets. System performance is guaranteed for 20 years!

*VDI: Voice, Data, Image

Manage from the room terminal

Having a computer terminal in the room optimises the medical staff's work and improves patient comfort.

- Connected to the network this terminal can be used for direct and secure access to the medical file, brought to the patient as closely as possible.
- The touch screen allows the room's "comfort" functions to be controlled.
- There is also a telephone, Internet and videos on demand.

Performance linked to the quality of the Legrand VDI infrastructure.

Cat. 6A RJ 45 socket installed on the bedhead strip or remotely, can be used to access the building's network

Antimicrobial wiring accessories

Destruction of the bacteria sodium ions via the silver ions of the wiring accessories

The antimicrobial asset

The antimicrobial effect of wiring accessories stems from the construction of their material based on silver ions Ag+. This technology means that the Legrand antimicrobial range can guarantee the non-proliferation of bacteria, viruses and fungi without creating any immunisation or resistance effects (physical destruction and not chemical). It acts in particular on the staphylococcus aureus cells resistant to antibiotics from the methicillin family. The effectiveness of Legrand's antimicrobial products has been tested by the authorised COFAC laboratory: at least 99.99% of the bacteria tested were eliminated. The usual cleaning procedures must however be retained in order to guarantee perfect hygiene.

All essential functions with antimicrobial action

With more than fifty functions available Legrand offers a real range of antimicrobial wiring accessories designed for healthcare establishments.

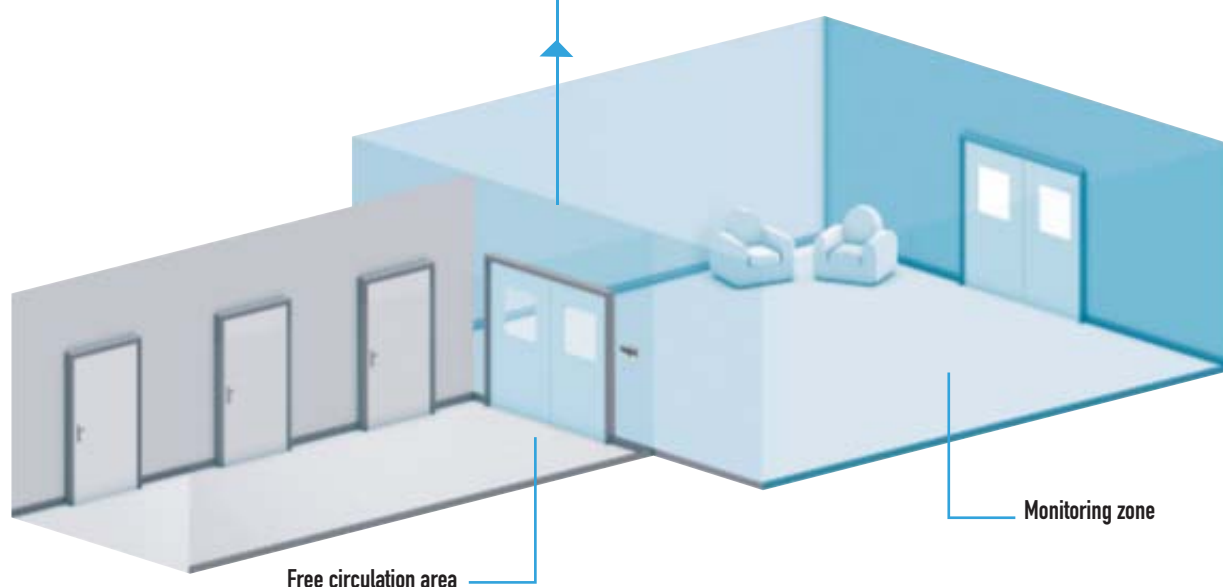

Secure wandering device

In addition to its room solutions, which make up its “core business”, Legrand offers a secure wandering system in order to provide an overall solution for the needs of retirement homes and healthcare buildings.

Secure wandering

This involves controlling the path of movement of a long-stay patient or in an Alzheimer’s care unit. Fitted with a wristband that transmits a signal, it triggers an alarm as soon as one of the building thresholds defined by the operator and equipped with a detection aerial has been crossed. The alarm can be sent directly to the nurses’ control unit and to the DECT via a door unit. The event can be traced using the dedicated software.

Other equipment with remote management and control

To guarantee energy performance in healthcare buildings

In addition to the equipment and antimicrobial products dedicated to the rooms in healthcare establishments, Legrand also offers a coherent set of solutions for guaranteeing energy performance in commercial buildings and optimising their maintenance. Energy and time savings into the bargain: all institutions controlled and monitored from the PC screen.

Thanks to centralisation of the software on the building manager, the entire establishment can be controlled, monitored and its maintenance supervised from a local or remote PC: actimetry, traceability, measuring, emergency lighting, etc.

■ Power

■ Emergency lighting

■ Fire

■ Lighting management

■ Access control

Measure the quality and amount of energy consumed.

Monitor the entire installation of the emergency lighting units.

Monitor the operation of the type 1 fire alarm (transfer possible to DECT).

Manage lighting consumption and facilitate relamping.

Control access and monitor the installation in centralised mode.

1	038 42	<p>Zone management unit Includes 2 functions: - manages scenario programming (e.g. time management, lighting, presence)) - IP interface, provides the link between the BUS/SCS infrastructure and the IP network Approximately one zone management unit per 20 rooms Requires power supply unit Cat. No. 035 64 6 x 17.5 mm DIN modules</p>
1	634 42	<p>Zone management unit power supply Power supply 220-240 V - 50/60 Hz Output 1-2 27 V_± - 600 mA 2 modules DIN 17.5 mm</p>
1	035 60	<p>BUS/SCS power supply 230 V_~ - 27 V_± - 1.2 A 8 x 17.5 mm DIN modules</p>
1	492 33	<p>BUS/SCS cable Length 200 m Non-halogen cable</p>

Lighting actimetry software (p. 28)

lighting to assist with independent living

BUS/SCS system solution and actimetry (continued)

Screenshot of actimetry software Cat. No. 783 80

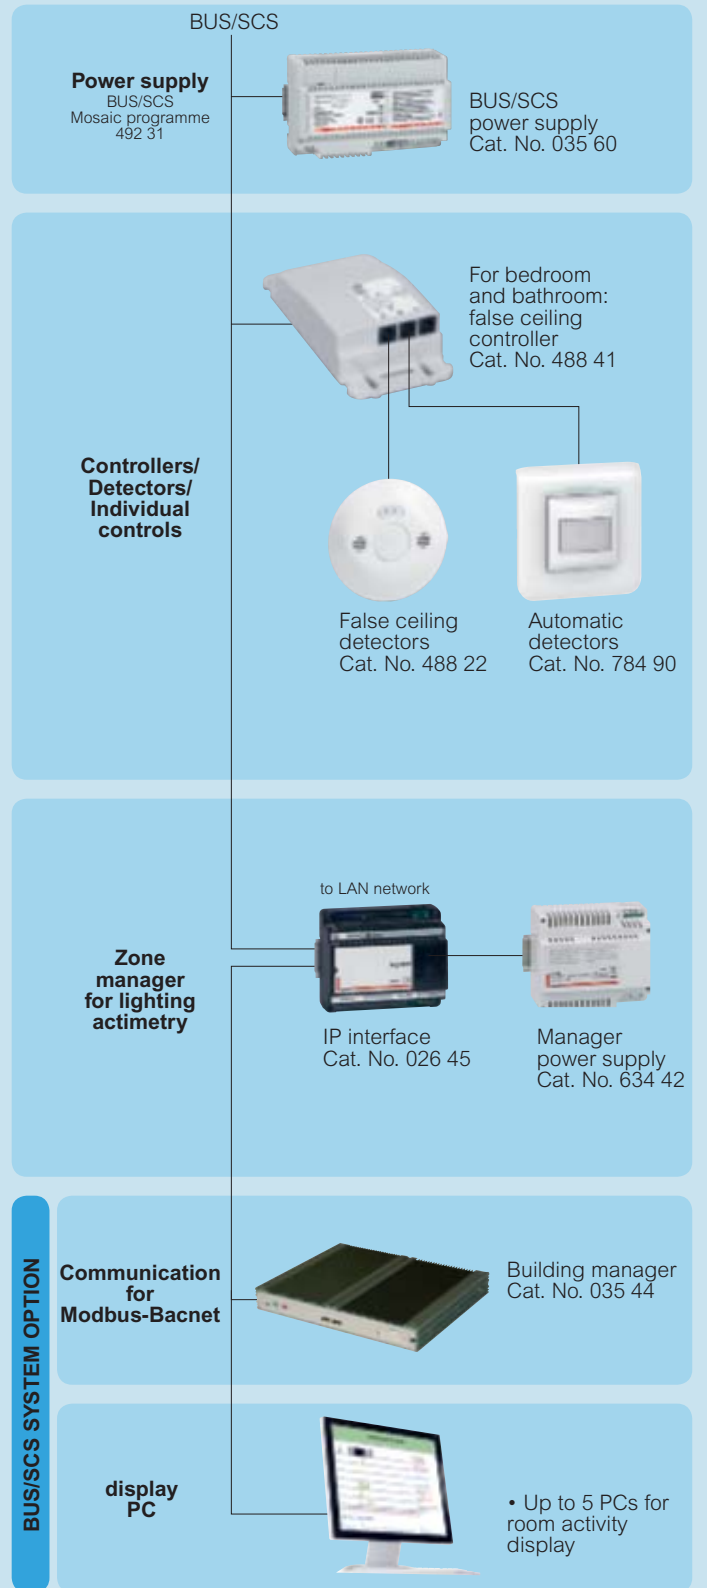

035 44

Pack	Cat.Nos	Lighting actimetry
1	783 80	Actimetry software For recording activity in rooms and bathrooms Any activity is tracked by the triggering of detectors and low-level lights (illuminated signalling) and other lighting being turned on Option of programming detection levels to be recorded depending on the level of light (e.g.: night, nap time, etc.) and time slots Option of a 24-hour display for rooms with heavy activity and to categorise them Installing the software on building manager Cat. No. 035 44 is recommended
1	035 44	Building manager Ensures communication of the Modbus-Bacnet protocols, storing and information history Can be used to centralise the following software packages: - lighting actimetry Cat. No. 783 80 - traceability Cat. No. 766 18 (p. 31) - Legrand: lighting management and measurement (see p. 18-19)

Pack	Cat.Nos	Call devices for rooms
6	782 40	<p>Antimicrobial: hand-held remote control unit and cord</p> <p>White antimicrobial Magnetic connection between hand-held remote control unit and socket: can be ejected in all directions with pull-out torque designed to avoid any damage to the equipment</p> <p>Hand-held remote control unit for call only IP67 waterproof hand-held remote control unit: - designed ergonomically for ease of handling - 1 call button and red indicator for call confirmation - visible at night via 2 illuminated LEDs - fitted with a 2.5 m cord For use in conjunction with socket Cat. No. 782 41</p>
6	782 42	<p>Call and lighting control hand-held remote control unit IP 67 waterproof hand-held remote control unit: - designed ergonomically for ease of handling - 1 call button and red indicator for call confirmation - visible at night via 2 illuminated LEDs - 1 button for reading light control - 1 button for room light control Fitted with a 2.5 m cord For use in conjunction with socket Cat. No. 782 45</p>
6	782 44	<p>Hand-held control unit for calls and controlling lighting and roller shutters IP 67 waterproof hand-held remote control unit: - designed ergonomically for ease of handling - 1 call button and red indicator for call confirmation - visible at night via 2 illuminated LEDs - 1 button for reading light control - 1 button for room light control - 2 buttons for controlling roller shutters - 1 free function button (example: switched socket) Fitted with a 2.5 m cord For use in conjunction with socket Cat. No. 782 45</p>
1	782 46	<p>Sockets for hand-held remote control units Supplied pre-assembled with finishing plate in white, antimicrobial and 2-module support</p> <p>Non-indexed magnetic connection socket for hand-held remote control unit Cat. No. 782 40</p>
1	782 47	<p>Magnetic connection socket for hand-held remote control units Cat. No. 782 42/44</p>
5	782 43	<p>Accessory for hand-held remote control units Clamp for holding the hand-held remote control unit within reach: on bedding, clothes, a chair arm, the edge of the bed, etc.</p>

Pack	Cat.Nos	Call devices for bathrooms
1	782 48	<p>Mechanisms supplied with support and finishing plate in white, antimicrobial</p> <p>Ejectable call pull cord Bathroom call pull cord, IP55 waterproof, ejectable With red indicator for call confirmation Fitted with height-adjustable handle Red antimicrobial cord Can be installed in a shower at a height of 2.20 m</p>
1	766 85	<p>Call unit Antimicrobial bathroom call pushbutton With red indicator for call confirmation IP 20 IP 44 with plate Cat. No. 788 80 (p. 35)</p>
1	782 49	<p>Call devices for specific environments</p> <p>Waterproof call unit IP55 waterproof call unit Mechanism supplied with support and finishing plate in white With red indicator for call confirmation Suitable for damp environments (e.g.: rehabilitation and recovery centres with swimming pool, steam room, sauna, etc.)</p>
1	782 51	<p>High-resistance call unit Call unit with high resistance to impacts IK 10 and to humidity IP X5 Grey metallic alloy With red indicator for call confirmation Suitable for psychiatric and penal institutions, etc. Supplied pre-assembled with plate and support</p>
1	771 50	<p>Biomedical call devices for bedrooms or special rooms 1 module</p> <p>Socket mechanism for biomedical calls Signals the end of a cycle via an alarm on the nurse call unit system For connecting portable electrical medical appliances such as syringe pumps, respirators, etc. 12 mm fixing centre ○ White antimicrobial</p>
1	782 07	<p>Shunt plug Shunt plug for biomedical alarm standby 12 mm fixing centre Used with socket Cat. No. 771 50</p>

BUS/SCS nurse call unit

signalling and acknowledgement devices for rooms

Antimicrobial

766 06

766 07

766 08

782 00

BUS/SCS system with star wiring around the door unit:

- call centralisation
- acknowledgement
- communication with nursing control unit and all elements of the system via BUS/SCS
- signalling forwarded to all indicators (e.g.: corridor overhead light unit, door unit, hand-held remote control unit)

Door units for rooms

Pack	Cat.Nos	
1	766 06	<p>For installation at the entrance to the room, can be seen from the bed Connect directly to the BUS/SCS cable Cat. No. 492 32/33 With indicator and pushbutton for calls, nurse presence and 2nd nurse presence Comply with standards VDE 0834-1 and 0834-2 Fault display 4-module wiring mechanisms supplied complete Flush mounting with flush-mounting box for Mosaic with depth 50 mm or surface mounting with frame Cat. No. 766 14 (p. 31) Antimicrobial</p> <p>Door unit with indicators Door unit with illuminated call indicators Nurse presence and acknowledgement via pushbutton. Audible and illuminated signal of a call coming from another room Suitable for shared bathrooms and for secure wandering</p>
1	766 07	<p>Door unit with display Door unit with alphanumeric display Nurse presence and acknowledgement via pushbutton. Call display from another room Used in conjunction with the interphone unit Cat. No. 766 09 for communicating with rooms issuing calls and with a nurse present User is able to acknowledge at the end of the communication</p>

Interphone unit for room and nurses' station

1	766 08	<p>Interphone door unit For installation: - at the entrance to the room connected to the door unit with display Cat. No. 766 07 - in the nurses' room linked to the control unit Cat. No. 766 11 (p. 31) Allows the user to: - communicate from one room to another room issuing a call or with a nurse present - broadcast a general call Must be connected to a microphone Cat. No. 782 00 for communication between the patient and the nursing staff 4-module wiring mechanism supplied complete Flush mounting with flush-mounting box for Mosaic with depth 50 mm or surface mounting with frame Cat. No. 766 14 (p. 31) Antimicrobial</p>
1	782 00	<p>Room microphone Remote microphone for connection to the interphone unit Cat. No. 766 08 For installation next to the bed. For communication between the patient and the nursing staff. 2-module mechanism. Supplied pre-assembled with finishing plate in white and 2-module support</p>

BUS/SCS nurse call unit

corridor signalling devices

766 70

766 04

Technical characteristics p. 36

Ensures that information is transferred into the corridor

Pack	Cat.Nos	Corridor signalling devices
1	766 71	<p>For installation in the corridor above the doors Supplied with support and white finishing plate Flush-mounting or surface-mounting.</p> <p>Call only corridor overdoor light unit LED triangular overdoor light unit for call signalling 1 red indicator For call signalling 2 modules</p>
1	766 70	<p>Call and nurse presence corridor overdoor light units LED triangular overdoor light units for call signalling, bathroom calls and nurse presence Recommended for compliance with standards VDE 0834-1 and 0834-2 Monobloc indicator in red, white, green 2 modules</p>
1	766 04	<p>Corridor display unit For installation in the corridor 10 character alphanumeric display White Indication of calls and nurse presence by level of priority For fixing in false ceiling or on the wall Supplied with connection interface to the BUS/SCS Double sided display unit</p>
1	766 05	<p>Fixing accessory for corridor display unit For fixing a corridor display unit projecting</p>

BUS/SCS nurse call unit

signalling devices for nurses' station

Technical characteristics **p. 36**

Pack	Cat.Nos	Control units
		<p>Call and presence display for all bedrooms and rooms in order of priority (max. 150) 4-module wiring mechanism supplied with support For flush-mounted installation in flush-mounting box depth 50 mm or on inclined plane Cat. No. 766 12/13 Antimicrobial With alphanumeric display and adjustable audible signal Scrolled display of the calls and nurse visits in progress Fitted with a malfunction indicator Used in conjunction with the interphone unit Cat. No. 766 08 allows:</p> <ul style="list-style-type: none"> - communication with the bedrooms issuing calls and with a nurse present - call acknowledgement at communication end - calls to be made to all rooms with a nurse present <p>Connects directly to the BUS/SCS cable Cat. Nos 492 32/33</p> <p>Main control unit</p> <p>1 766 11 For installation in the nurses' station</p> <p>Secondary control unit</p> <p>1 766 09 Can be used in addition to the main control unit in another room (break room, dining room, etc.) or in a corridor</p>

Pack	Cat.Nos	BUS/SCS cables
		Supplied on a reel
1	492 32	Length 500 m
1	492 33	Length 200 m Non-halogen cable

Pack	Cat.Nos	Fixing accessories
		For control units
1	766 12	Inclined plane for fixing control unit only onto table
1	766 13	Inclined plane for fixing control unit + interphone unit onto table
		For control units, door units and interphone units
1	766 14	Frame surface mounted for refurbishment

Pack	Cat.Nos	Call transfer interface to DECT
1	766 19	Interface for forwarding information as ESPA 444 protocol to the DECT system (text messages only) 2 x 17.5 mm DIN modules

Pack	Cat.Nos	Traceability on PC
		Traceability software
1	766 18	<p>Memorises and categorises events by information type (calls, nurse presence, acknowledgement, etc.) Time stamping of events Export of the elements as .csv files which can be used on a PC Works with traceability interface Cat. No. 766 17 to be ordered separately</p> <p>Traceability interface</p> <p>1 766 17 Works with call traceability software Cat. No. 766 18 2 x 17.5 mm DIN modules</p>
		Building manager
1	035 44	<p>Allows communication of the Modbus-Bacnet protocols, storing and information history Can be used to centralise the following software packages:</p> <ul style="list-style-type: none"> - lighting actimetry Cat. No. 783 80 - traceability Cat. No. 766 18 (p. 31) - Legrand: lighting measurement and management (see p. 18-19)

BUS/SCS nurse call unit

system products

035 60

766 10

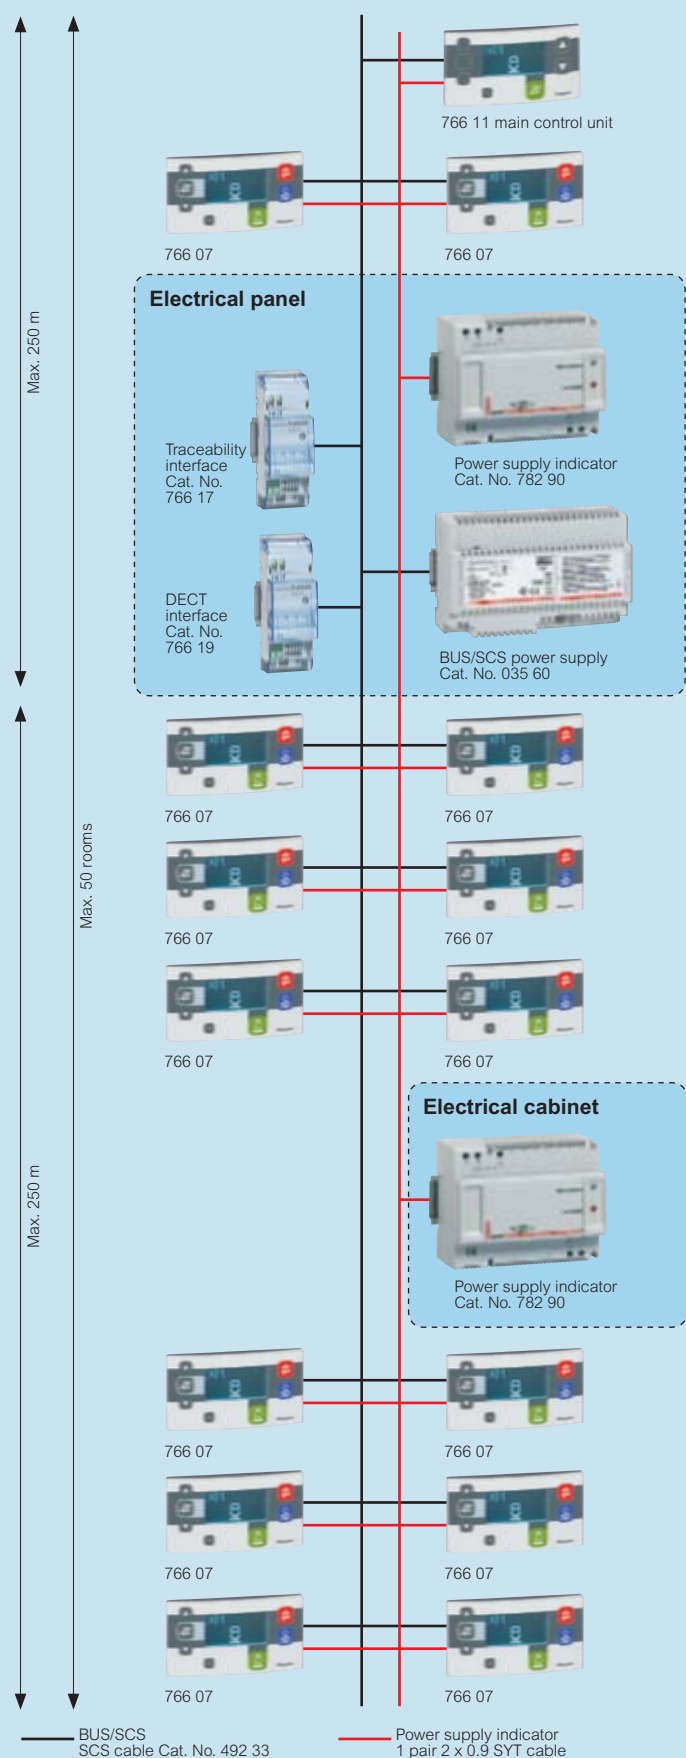

261 45

Pack	Cat.Nos	SELV power supplies
1	035 60	For BUS/SCS Secure power supply 230 V~ - 27 V= - 1.2 A 8 17.5 mm DIN modules
1	782 90	For indicators For overdoor light units with bulb or LED 230 V/24 V - 2.5 A power supply For mounting in modular cabinet 6 modules
BUS/SCS extension		
1	766 10	For communicating information between 2 BUS/SCS nurse call systems Used where departments are grouped together or for departments with more than 80 rooms (e.g.: nursing homes, residential homes for the elderly, etc.)
Physical configuration of the installation		
Suitable for establishments with fewer than 80 rooms		
Configuration using a configurator Used to associate an address with the different system components Kit with configurators 0 to 9 (10 configurators for each digit)		
1	261 45	↑↓
5	492 20	
Virtual configuration of the installation		
Recommended for installations above 80 rooms		
Configuration via PC Virtual configuration software For installations of 0 to 150 departments For use with interface Cat. No. 766 16 (to be ordered separately) for connecting a PC		
1	766 15	
Configuration kit Interface for connecting a PC and the installation Works with software Cat. No. 766 15		
1	766 16

nurse call

for day hospitals, dialysis centres, etc.

Designed for nurse call equipment in day hospitals, dialysis and transfusion centres, scanners, etc.
 Functions:
 • from the room: calls, emergency calls, nurse present indicator and call cancelling
 • from the nurses' station: patient reassurance
 Possibility of adding a paging system

Pack	Cat.Nos	Display units and management
1	766 60	6-direction call display unit  Registration of calls via numbered indicator lights and audible signal Several calls can be registered simultaneously Display of reassurance indicator and nurse present Possibility of transferring calls to 4 other display units (e.g.: treatment room, rest area, etc.) Installed: - in surface mounting box Cat. No. 802 86 - on table control unit Cat. No. 782 14 6 modules
1	782 14	Table control unit  Takes up to 6 display units Cat.No 766 60 Horizontal or vertical mounting Dim.: 310 x 295 x 75 mm 36 modules
1	782 89	24 V - 2 A - 48 W power supply  Powers the system If necessary, a 24 V protected power supply can be used 8 modules
1	782 12	3-direction management module  Manages 3 rooms (or directions) Possibility of forwarding via NO volt-free contact for indicator, audible signal, paging, master indicator 4 modules

Pack	Cat.Nos	Corridor and room equipment
1	766 72	Double display corridor overdoor light unit  Supplied with metal support for screw mounting and white finishing plate 2 modules Can be flush or surface mounted Fitted with long life LEDs Double indicator (red/white) Displays calls and nurse present in the corridor
1	782 04	Door unit  Includes 1 red indicator, 1 white indicator and 1 call and nurse presence cancel pushbutton. Antimicrobial

nurse call units

Suitable for hotels, teaching establishments, non-medical retirement homes
 For centralisation of 1 to 6 calls via indicator lights
 Call control via pushbutton
 2 wires per direction
 Registration of calls via numbered indicator lights and brief audible signal
 Several calls can be registered simultaneously
 Individual cancelling for each direction
 Supplied with numbers
 Possibility of using a 12 V protected supply for 12 V SELV units

Pack	Cat.Nos	Call units
1	766 55	6-direction modules Used to create call panels according to requirements 6 modules With integrated power supply 127/230 V~ - 50/60 Hz
1	766 57	For external 12 V SELV power supply (not provided)
1	766 56	6-direction transfer unit 6 directions For remote transfer of calls 6 modules
1	783 62	Components for call units  With 2 A NC contact Fitted with 2 m lead With 12 mm fixing centre plug for 2P socket Cat.No 771 50
1	771 50	Socket mechanism for biomedical calls  1 module Signals the end of a cycle via an alarm on the nurse call unit system For connecting portable electrical medical appliances such as syringe pumps, respirators, etc. 12 mm fixing centre ○ White antimicrobial

	787 26	6 horizontal modules Plate 6 modules horizontal - White

Complete mechanisms (mechanism + support + plate)

	782 48	Call pull cord Bathroom call pull cord IP 55, ejectable 2 modules - White
	766 85	LED call unit Call unit with red indicator 2 modules - White
	782 04	Door unit Door unit with red indicator, white indicator and a call and nurse presence cancel pushbutton
	784 90	Automatic detector BUS/SCS automatic detector 2 modules - White
	782 46	Magnetic connection sockets Socket for call only hand-held remote control unit 2 modules - White
	782 47	Socket for call, lighting and shutter hand-held remote control unit 2 modules - White

reminder of current standards

■ Bedhead strips:

Self-extinguishing test

The test report related to compliance with the fire safety regulations is completed by an independent organisation

It involves a self-extinguishing test following application of an incandescent wire to the luminaire

The luminaire is qualified in accordance with the temperature of the wire applied and the time taken for the flame to extinguish: 850° and 30 seconds maximum are the qualification criteria for public buildings

CE marking

CE marking is a mandatory marking for luminaires

It is a declaration from the manufacturer itself which commits its signatory alone. There is no verification by external organisations

It is based on specific directives and standards which govern the manufacture of luminaires from the point of view of safety and electromagnetic compatibility

For electrical safety it involves standard EN 60 598 known as the Luminaire Standard

It ensures that the assemblies are electrically compliant and in a broader sense ensures all electrical safety aspects for the user Standard EN 60 598-2-25 is specific to luminaires in hospitals and health establishments

In terms of electromagnetic compatibility several standards provide a reference for luminaires

The aim is to ensure that the luminaire in operation is not going to disrupt other electrical and/or electronic devices such as televisions, alarms and indeed pacemakers

Conversely it must be ensured that these electrical or electronic devices do not disrupt the operation of the luminaires (for example their switching on):

- EN 12464-1 and NFX 90-003-1 standards on luminaires and the lighting of indoor workplaces

- EN 61547 CE standard on luminaire immunity

- EN 55015 CE standard on luminaire radiation

- EN 61000-3-2 CE standard on luminaire harmonics

Trunking for medical gases

Extract of standard FD S 90_155 on distribution systems for medical gases: where so-called "bedhead" medical gases are installed (see EN ISO 11197 on service ducts) or fixed mast arms (or ceiling columns) fitted in particular with sockets for medical gases, it is recommended that the same manufacturer is used for the distribution system and for the busbar systems inside the trunking, including the medical gas sockets integrated into the supplies provided

■ BUS/SCS nurse call unit

Complies with the VDE standard on call systems for hospitals, nursing homes and similar establishments:

- DIN VDE 0834-1 instructions for equipment, its installation and operation

- DIN VDE 0834-2 environmental conditions and electromagnetic compatibility

The indicators associated with the hospital signalling conform with the general standard EN 60 073 which provides the colour coding principles
