Safety instructions

Cables are to be used for designed applications only. In case of failure or damage to the cable or connector switch off power immediately and replace all damaged parts. Maintenance, repair and replacement of the cables and connectors must be carried out by authorised and trained personnel only.

All information concerning material properties, fire performance, construction, electrical and technical data, prices etc. are in accordance with our present-day standard of knowledge and are without obligation. Dimensions and weights are reference values. All indications may alter any time without prior notice.

We refer to our general conditions of sales and delivery. See www.leoni-studer.ch.

Waiver

While the information contained in this flyer has been carefully compiled to the best of our present knowledge, it is not intended as representation or warranty of any kind on our part regarding the suitability of the products concerned for any particular use or purpose and neither shall any statement contained herein be construed as a recommendation to infringe any industrial property rights or as a license to use any such rights. The suitability of each product for any particular purpose must be checked beforehand with our specialists.

Our policy is one of continuous material and product development. We reserve the right to offer alternatives consistent with our manufacturing programme at the time of enquiry. All information concerning material properties, fire performance, construction, electrical and technical data, prices etc. are in accordance with our present-day standard of knowledge and are without obligation. Dimensions and weights are reference values. All indications may alter any time without prior notice.

We refer to our general conditions of sales and delivery. See www.leoni-studer.ch.

RoHS Compliance

We confirm that all products listed in this catalogue, are fully compliant manufactured with the EU Directive 2002/95/EG (RoHS) as of the 1st January 2006.

LEONI – The Quality Connection.

What connects us.

LEONI – Expertise in Communication & Infrastructure

LEONI is a strong company group with over 47,000 employees scattered across 95 locations in 36 different countries. Entrepreneurial far-sightedness, top quality and a high level of innovation have made us a leading cable system provider for the automobile and other industries. LEONI develops and produces sophisticated technical products from single core vehicle wiring up to complex on board power supply systems and provides the associated services. Moreover, the range of services includes wires and braid, standardised and special cables plus fully assembled systems for applications in various industrial markets.

Your markets – our strengths

As diverse as the range of products and services is, so varied are the markets and sectors that LEONI supplies. Our activities are concentrated on customers in the markets

Automotive, Communication & Infrastructure, Industry & Healthcare, Electrical Appliances and Conductors & Copper Solutions.

Cables, components and complete systems: Around the globe, our Communication & Infrastructure customers benefit not only from innovations but quality products that are reliable and durable. They also reap the benefits from our complete range of services involving project engineering, implementation and maintenance. That this applies equally to the skills of Europe's leading cable manufacturer for secure communication and infrastructure products should come as no surprise.

LEONI – Connecting the future.

In the Communication & Infrastructure sector LEONI bundles its products and services for data and telecommunications in offices and industrial building on the one hand. On the other, the portfolio for infrastructure projects concentrates on transportation routes, buildings, airports, rail and marine technology and major industrial plants such as oil and gas refineries. LEONI also manufactures special cables for solar parks that fulfil the two relevant international standards TÜV (Europe) and UL (America) for the entire range of products.

Safety from a single source

The Infrastructure & Datacom business unit is an internationally operating enterprise area belonging to the LEONI group. We develop and manufacture high quality cables and also process sophisticated compounds for conductor insulation. The BETAflam® brand for cables and BETAFixss® brand for laying systems are the acknowledged standards for installations in public buildings, structural and civil engineering and in transportation infrastructure plants. Thanks to the ability to continue functioning even in cases of fire our products make an important contribution in critical situations.

The halogen-free and flame retardant insulation materials used for our cables are mostly developed and produced by us. Fire tests on cables and support systems are carried out in our internal laboratories in accordance with all the pertinent standards. National and international test certificates for many components make us an attractive system provider. With competent advice and a wealth of experience we are the partner for planning engineers and fitters for the following areas:

Public buildings

Our cables and support systems supply the safety installations and evacuation routes in hospitals, schools, homes, museums etc.

Railway stations / Metro stations / Airports

Our safety cables for lighting and identifying evacuation routes and emergency exits increase the safety in infrastructure buildings.

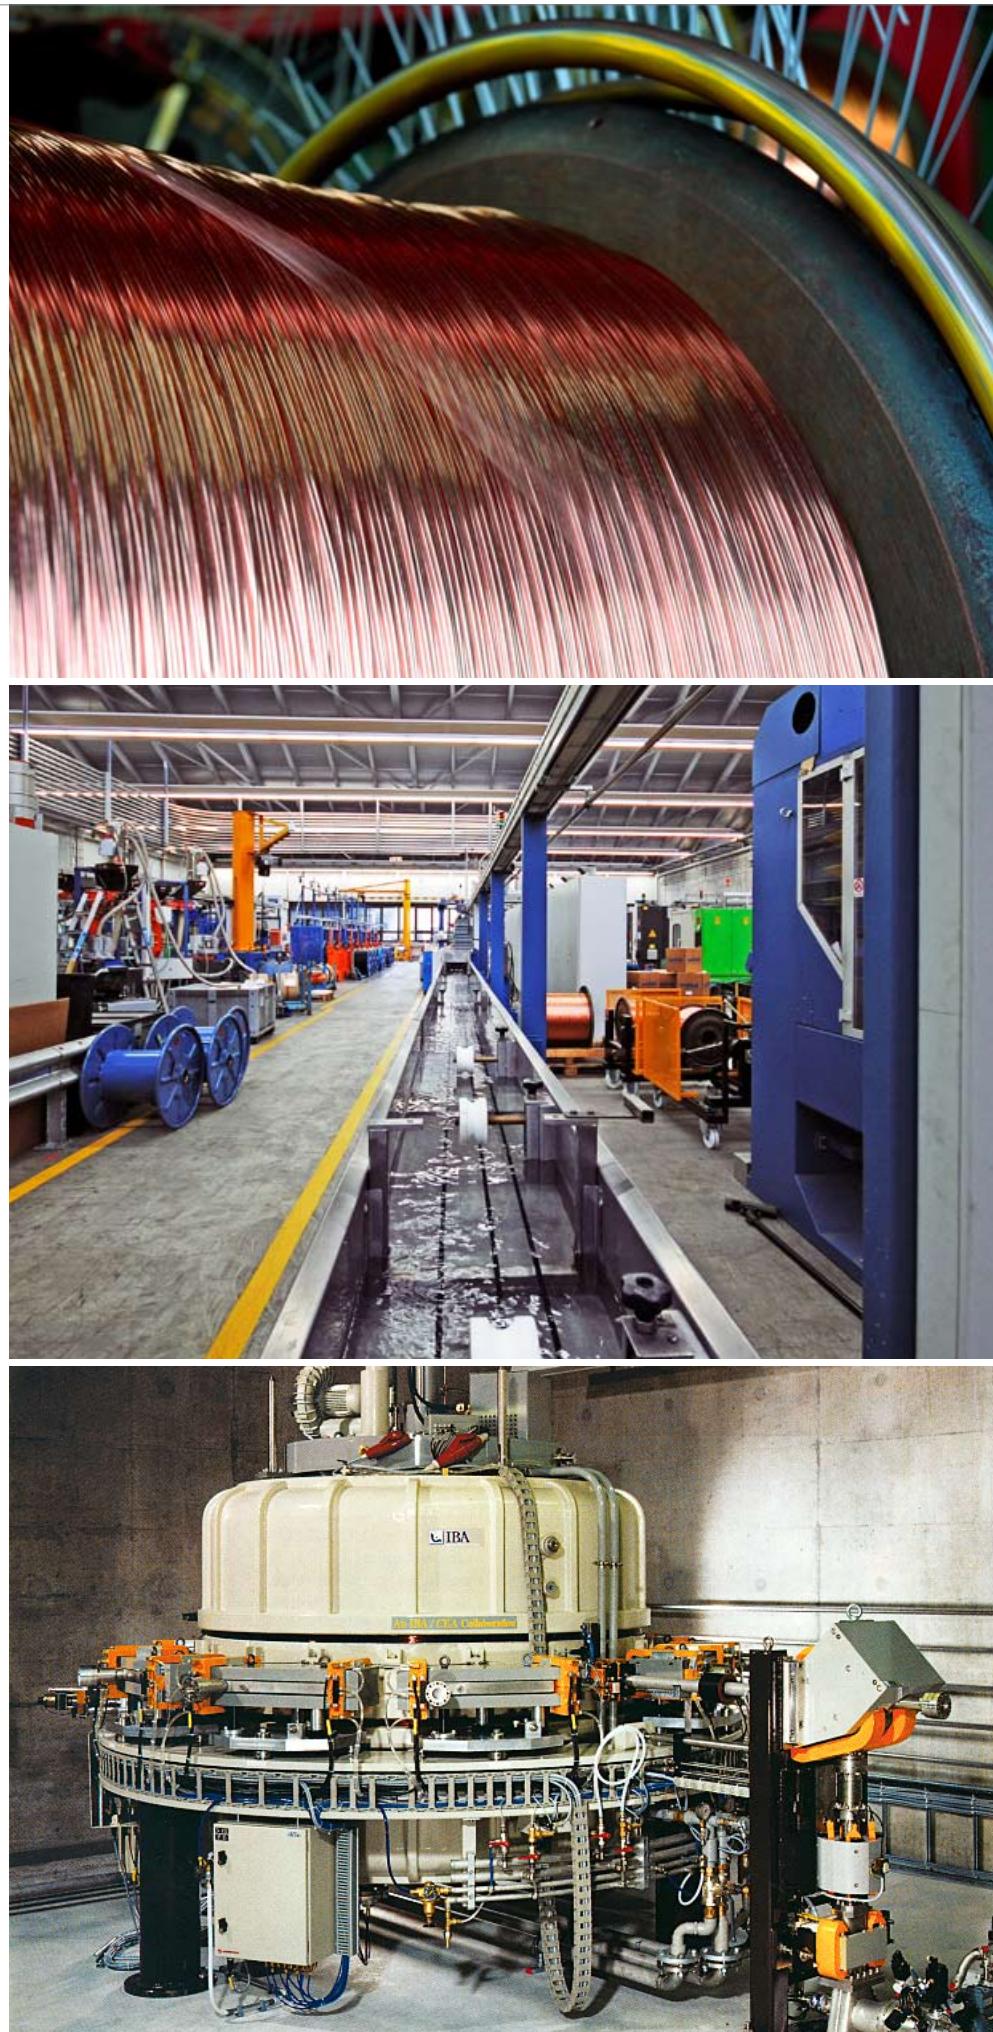

Transportation routes

Our cable and laying systems are used to safeguard the electrical supply for identifying, illuminating and controlling systems for all types of transportation route infrastructure.

Tunnels

Our cables and support systems are designed to safeguard the illumination and optical control systems and also supply ventilators and rescue routes in emergencies.

Protection to life and property is assured.

People can move about in safety.

■ **Public buildings ...**

Our cables and support systems energise the safety equipment and escape routes.

■ **Train stations, underground stations, airports ...**

Lighting, emergency exits and signalling ensure safety in infrastructure buildings. Thanks to their system integrity during exposure to fire, our products make a crucial contribution in critical situations.

■ **Transport routes ...**

Our products are used for the markings, illumination and control of transport routes.

■ **Tunnels ...**

With our cables and support systems we safeguard the lighting and optical control equipment as well as power supply to ventilators and escape routes for emergency situations.

Building and transport infrastructure nowadays have high requirements in terms of protection against disruption and fire. Developers and planners take their responsibility seriously and impose higher expectations on the safety technology of buildings such as hospitals, event facilities and office complexes. This ensures that people can escape in the event of fire and that successful firefighting minimises the damage caused. While infrastructure is presented with fresh challenges from ever more complex applications, the obligation everywhere is to provide maximum safety. Our BETAflam® products meet the key international regulations and standards in both structural and civil engineering.

We are convinced that the trend towards comprehensive safety will also be the focus of much attention in the future, and that we will make a crucial contribution in this regard with our high quality products.

Universal application with system integrity.
Safety from one source.

Certificate No. 896

BETAflam® cables according to German VDE Standard

Wires and cables for highest safety requirements with circuit integrity in accordance with DIN VDE 0266

- VDE approval and surveillance
- Fire resistant
- No flame propagation
- Cross-linked by irradiation
- System circuit integrity to DIN 4102 part 12, E30 - E90
- Halogen and silicone free
- Low smoke and gas emission
- In compliance with RoHS directive
- Operating temperature 90 °C

BETAflam® cables according to British Standard

Single and Multicore cables for highest safety requirements, in accordance with BS 6387 C.W.Z.

- LPCB approval and surveillance
- PSB Product Listing Scheme, SG
- Fire resistant / Circuit integrity
- No flame propagation
- Cross-linked by irradiation
- Halogen and silicone free
- Low smoke and gas emission
- In compliance with RoHS directive
- Operating temperature 90 °C and 110 °C

BETAflam® cables according to Swiss Standard

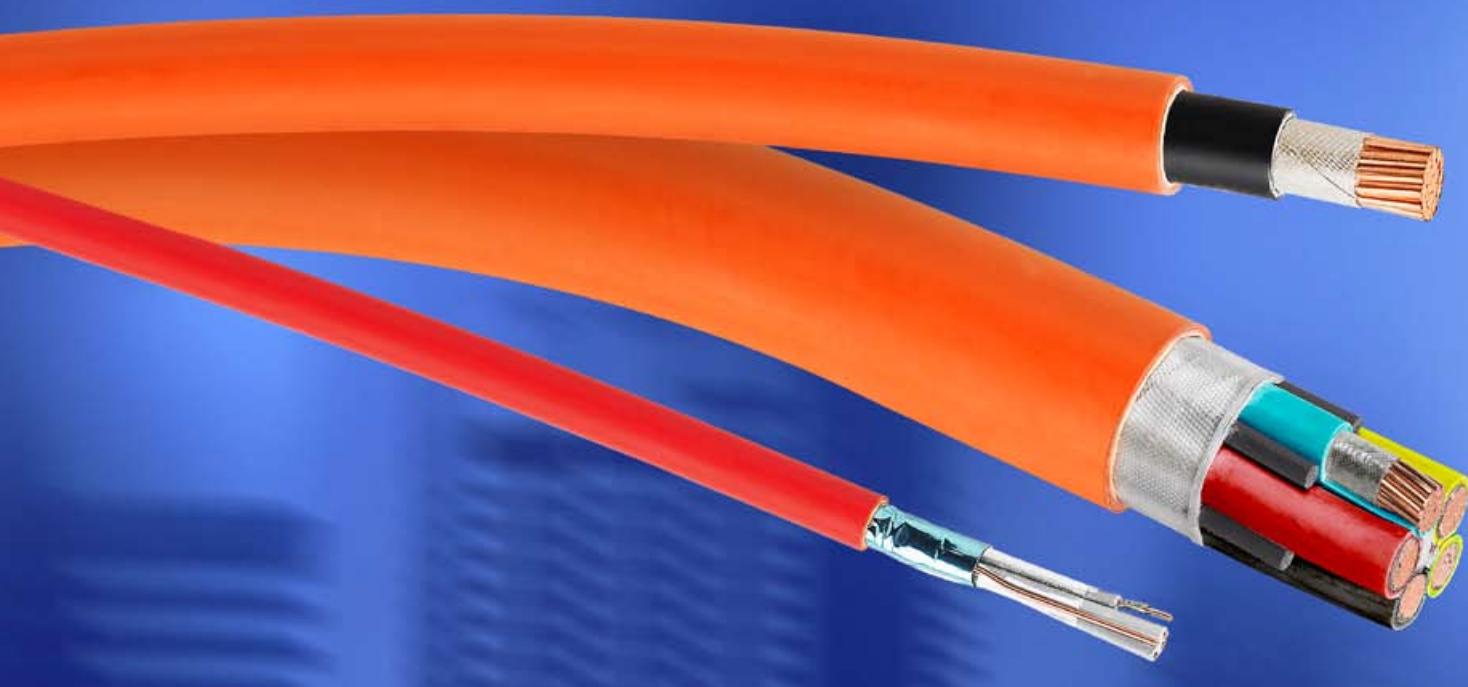

Single and Multicore cables for high safety requirements in accordance with SEV TP 20B/3C.

- ElectroSuisse approval
- Fire resistant / retardant
- No flame propagation
- System circuit integrity E30
- Halogen and silicone free
- Low smoke and gas emission
- In compliance with RoHS directive
- Operating temperature 90 °C

BETAfixss® cable support system with total circuit integrity in fire according to German DIN Standard

This support system is used in electrical cable installations with system integrity. They also ensure fire resistant fixing of cables laid in the area between floors as well as F30 and F90 suspended ceilings.

- DIN 4102 part 12 / ABP approval
- High quality materials
- Long laying distances
- Reduced cost of materials
- Short installation time
- One source for cables and laying system
- System circuit integrity

BETAflam® Fire Retardant Cores & Cables**FRT-MI 90** 0,6 / 1 kV, LSOH**Single Core / Single Insulated****Application**

Use as replacement for conventional PVC wiring to reduce hazardous gas emission and avoid secondary damage in the event of fire .

Construction

- **Conductor:** Bare annealed copper, acc. IEC 60228 class 2
- **Insulation:** BETAflam® mineral copolymer
- **Core identification:** Red, Black or Green/Yellow (other colours on request)

Technical specification

- **Rated voltage:** U₀/U 0,6 / 1 kV
- **Test voltage:** 3,5 kV / 50 Hz
- **Temperature range:**
Operation temperature from – 30 °C to + 90 °C
Laying temperature from – 5 °C to + 70 °C
Short circuit temperature + 160 °C (temperature peak ≤ 5 s)
- **Bending radius:**
During laying > 15 × outer Ø
Fixed installed > 10 × outer Ø
- **Laying conditions:** For electrical installation in control cabinets, switchboards or other closed cable wiring systems.

Material properties

- **Halogen free:** IEC 60754-1; BS EN 50267-2-1; VDE 0482-267-2-1
- **No corrosive gases:** IEC 60754-2; BS EN 50267-2-2; VDE 0482-267-2-2
- **No toxic gases:** NES 02-713; NF C20-454; BS EN 50267-2-1
- **Low smoke density:** IEC 61034-1 & -2; BS EN 61034-2; VDE 0482-1034-1 & -2

Fire performance

- **Flame retardant:** IEC 60332-1; BS EN 60332-1; VDE 0482-332-1
- **No flame propagation:** IEC 60332-3-24; EN 60332-3-24; VDE 0482-266-1 & -2-4

Advantages

- Halogen and silicone free
- Operating temperature 90 °C
- In compliance with RoHS directive
- Mineral filled fire resistant materials
- Space saving due to small outer diameter
- Easy to handle and economical to install

BETAflam® Fire Retardant Cores & Cables**FRT-MI 90** 0,6 / 1 kV, LSOH**Single Core / Double Insulated****Application**

Use as replacement for conventional PVC wiring to reduce hazardous gas emission and avoid secondary damage in the event of fire.

Construction

- **Conductor:** Bare annealed copper, acc. IEC 60228 class 2
- **Insulation:** BETAflam® mineral copolymer
- **Core identification:** Black, White or Green-Yellow (other colours on request)
- **Sheath:** BETAflam® mineral copolymer, Orange (Black on request)

Technical specification

- **Rated voltage:** U₀/U 0,6 / 1 kV
- **Test voltage:** 3.5 kV / 50 Hz
- **Temperature range:**
 - Operation temperature from –30 °C to +90 °C
 - Laying temperature from –5 °C to +70 °C
 - Short circuit temperature +160 °C (temperature peak ≤ 5 s)
- **Bending radius:**
 - During laying > 15 × outer Ø
 - Fixed installed > 10 × outer Ø
- **Laying conditions:** For fixed installation indoor, in air, trays or dry tubes/ducts. Outdoor laying only when protected from direct sunlight and other external impacts.

Material properties

- **Halogen free:** IEC 60754-1; BS EN 50267-2-1; VDE 0482-267-2-1
- **No corrosive gases:** IEC 60754-2; BS EN 50267-2-2; VDE 0482-267-2-2
- **No toxic gases:** NES 02-713; NF C20-454; BS EN 50267-2-1
- **Low smoke density:** IEC 61034-1 & -2; BS EN 61034-2; VDE 0482-1034-1 & -2

Fire performance

- **Flame retardant:** IEC 60332-1; BS EN 60332-1; VDE 0482-332-1
- **No flame propagation:** IEC 60332-3-24; EN 60332-3-24; VDE 0482-266-1 & -2-4

Advantages

- Halogen and silicone free
- Operating temperature 90 °C
- In compliance with RoHS directive
- Mineral filled fire resistant materials
- Space saving due to small outer diameter
- Easy to handle and economical to install

BETAflam® Fire Resistant Safety Cables**FR-MI 90** 0,6 / 1 kV, acc. to BS 6387 C.W.Z., LSOH**Single Core / Single Insulated****Application**

Single cores for use in cable wiring systems with improved fire performance and circuit integrity.

Use for: Fire Alarm circuits, Fire Detection circuits, Emergency signal / Control circuits, Fire fighting systems (water pumps), Smoke Exhaust Systems etc. Especially recommended in areas where human and animal live as well as valuable property are exposed to high risk in case of fire.

Construction

- **Conductor:** Bare annealed copper, acc. IEC 60228 class 2
- **Flame barrier:** MICA tape
- **Insulation:** BETAflam® mineral copolymer, cross-linked
- **Core identification:** Red, Black or Green-Yellow (other colours on request)

Technical specification

- **Rated voltage:** U_{0/U} 0,6 / 1 kV
- **Test voltage:** 4 kV / 50 Hz
- **Temperature range:**
 - Operation temperature from -30 °C to +90 °C
 - Laying temperature from -5 °C to +70 °C
 - Short circuit temperature + 250 °C (temperature peak ≤ 5 s)
- **Bending radius:**
 - During laying > 10 × outer Ø
 - Fixed installed > 6 × outer Ø
- **Laying conditions:** Use for electrical installations in control cabinets, switchboards, or other closed cable wiring systems.

Material properties

- **Halogen free:** IEC 60754-1; BS EN 50267-2-1; VDE 0482-267-2-1
- **No corrosive gases:** IEC 60754-2; BS EN 50267-2-2; VDE 0482-267-2-2
- **No toxic gases:** NES 02-713; NF C20-454; BS EN 50267-2-1
- **Low smoke density:** IEC 61034-1 & -2; BS EN 61034-2; VDE 0482-1034-1 & -2

Fire performance

- **Flame retardant:** IEC 60332-1; BS EN 60332-1; VDE 0482-332-1
- **No flame propagation:** IEC 60332-3-24; EN 60332-3-24; VDE 0482-266-1 & -2-4
- **Insulation integrity FE180:** IEC 60331-21; VDE 0472-814
- **Circuit integrity:**
 - BS 6387 C.W.Z. / Ø ≤ 20 mm
 - BS 7846 Category F2 (Amendment 1 & 2, Annex L.1 / cable Ø > 20 mm)

Advantages

- High safety standard: BS 6387 C.W.Z, fully tested by LPCB / UKAS
- Halogen and silicone free
- Operating temperature 90 °C
- In compliance with RoHS directive
- Mineral filled fire resistant materials
- Space saving installation due to small outer diameter

BETAflam® Fire Resistant Safety Cables**FR-MI 90** 0,6 / 1 kV, acc. to BS 6387 C.W.Z., LSOH**Single Core / Double Insulated****Application**

Power cable 0.6 / 1 kV for fixed installation in cable systems with improved fire performance and circuit integrity.

Use for: Fire Alarm circuits, Fire Detection circuits, Emergency signal / Control circuits, Fire fighting systems (water pumps), Smoke Exhaust Systems etc. Especially recommended in areas where human and animal live as well as valuable property are exposed to high risk in case of fire.

Construction

- **Conductor:** Bare annealed copper, acc. IEC 60228 class 2
- **Flame barrier:** MICA tape
- **Insulation:** BETAflam® mineral copolymer, cross-linked
- **Core identification:** White, Black or Green-Yellow (other colours on request)
- **Sheath:** BETAflam® mineral copolymer, Orange

Technical specification

- **Rated voltage:** U₀/U 0,6 / 1 kV
- **Test voltage:** 4 kV / 50 Hz
- **Temperature range:**
Operation temperature from -30 °C to +90 °C
Laying temperature from -5 °C to +70 °C
Short circuit temperature +250 °C (temperature peak ≤ 5 s)
- **Bending radius:**
During laying > 10 × outer Ø
Fixed installed > 6 × outer Ø
- **Laying conditions:** For fixed installation indoor, in air, trays or dry tubes/ducts.
Outdoor laying only when protected from direct sunlight and other external impacts.

Material properties

- **Halogen free:** IEC 60754-1; BS EN 50267-2-1; VDE 0482-267-2-1
- **No corrosive gases:** IEC 60754-2; BS EN 50267-2-2; VDE 0482-267-2-2
- **No toxic gases:** NES 02-713; NF C20-454; BS EN 50267-2-1
- **Low smoke density:** IEC 61034-1 & -2; BS EN 61034-2; VDE 0482-1034-1 & -2

Fire performance

- **Flame retardant:** IEC 60332-1; BS EN 60332-1; VDE 0482-332-1
- **No flame propagation:** IEC 60332-3-24; EN 60332-3-24; VDE 0482-266-1 & -2-4
- **Insulation integrity FE180:** IEC 60331-21; VDE 0472-814
- **Circuit integrity:**
BS 6387 C.W.Z. / Ø ≤ 20 mm
BS 7846 Category F2 (Amendment 1 & 2, Annex L.1 / cable Ø > 20 mm)

Advantages

- High safety standard: BS 6387 C.W.Z, fully tested by LPCB / UKAS
- Halogen and silicone free
- Operating temperature 90 °C
- In compliance with RoHS directive
- Mineral filled fire resistant materials
- Space saving installation due to small outer diameter

BETAflam® Fire Resistant Safety Cables**FR-MI 110** 0,6 / 1 kV, acc. to BS 6387 C.W.Z., LSOH**Single Core / Single Insulated****Application**

Single cores for use in cable wiring systems with improved fire performance and circuit integrity.

For use: Fire Alarm circuits, Fire Detection circuits, Emergency signal / Control circuits, Fire fighting systems (water pumps), Smoke Exhaust Systems etc. Especially recommended in areas where human and animal live as well as valuable property are exposed to high risk in case of fire.

Construction

- **Conductor:** Bare annealed copper, acc. IEC 60228 class 2
- **Flame barrier:** MICA tape
- **Insulation:** BETAflam® mineral copolymer, cross-linked
- **Core identification:** Red, Black or Green-Yellow (other colours on request)

Technical specification

- **Rated voltage:** U_{0/U} 0,6 / 1 kV
- **Test voltage:** 4 kV / 50 Hz
- **Temperature range:**
Operation temperature from -30 °C to +110 °C
Laying temperature from -5 °C to +70 °C
Short circuit temperature +280 °C (temperature peak ≤ 5 s)
- **Bending radius:**
During laying > 10 × outer Ø
Fixed installed > 6 × outer Ø
- **Laying conditions:** Use for electrical installations in control cabinets, switchboards, or other closed cable wiring systems.

Material properties

- **Halogen free:** IEC 60754-1; BS EN 50267-2-1; VDE 0482-267-2-1
- **No corrosive gases:** IEC 60754-2; BS EN 50267-2-2; VDE 0482-267-2-2
- **No toxic gases:** NES 02-713; NF C20-454; BS EN 50267-2-1
- **Low smoke density:** IEC 61034-1 & -2; BS EN 61034-2; VDE 0482-1034-1 & -2

Fire performance

- **Flame retardant:** IEC 60332-1; BS EN 60332-1; VDE 0482-332-1
- **No flame propagation:** IEC 60332-3-24; EN 60332-3-24; VDE 0482-266-1 & -2-4
- **Insulation integrity FE180:** IEC 60331-21; VDE 0472-814
- **Circuit integrity:**
BS 6387 C.W.Z. / Ø ≤ 20 mm
BS 7846 Category F2 (Amendment 1 & 2, Annex L.1 / cable Ø > 20 mm)

Advantages

- High safety standard: BS 6387 C.W.Z, fully tested by LPCB / UKAS
- Halogen and silicone free
- Operating temperature 110 °C
- In compliance with RoHS directive
- Mineral filled fire resistant materials
- Space saving installation due to small outer diameter

BETAflem® Fire Resistant Safety Cables**FR-MI 110** 0,6 / 1 kV, acc. to BS 6387 C.W.Z., LSOH**Single Core / Double Insulated****Application**

Power cable 0.6 / 1 kV for fixed installation in cable systems with improved fire performance and circuit integrity.

Use for: Fire Alarm circuits, Fire Detection circuits, Emergency signal / Control circuits, Fire fighting systems (water pumps), Smoke Exhaust Systems etc.

Especially recommended in areas where human and animal live as well as valuable property are exposed to high risk in case of fire.

Construction

- **Conductor:** Bare annealed copper, acc. IEC 60228 class 2
- **Flame barrier:** MICA tape
- **Insulation:** BETAflem® mineral copolymer, cross-linked
- **Core identification:** White, Black or Green-Yellow (other colours on request)
- **Sheath:** BETAflem® mineral copolymer, Orange

Technical specification

- **Rated voltage:** U_{0/U} 0,6 / 1 kV
- **Test voltage:** 4 kV / 50 Hz
- **Temperature range:**
Operation temperature from -30 °C to +110 °C
Laying temperature from -5 °C to +70 °C
Short circuit temperature +280 °C (temperature peak ≤ 5 s)
- **Bending radius:**
During laying > 10 × outer Ø
Fixed installed > 6 × outer Ø
- **Laying conditions:** For fixed installation indoor, in air, trays or dry tubes/ducts. Outdoor laying only when protected from direct sunlight and other external impacts.

Material properties

- **Halogen free:** IEC 60754-1; BS EN 50267-2-1; VDE 0482-267-2-1
- **No corrosive gases:** IEC 60754-2; BS EN 50267-2-2; VDE 0482-267-2-2
- **No toxic gases:** NES 02-713; NF C20-454; BS EN 50267-2-1
- **Low smoke density:** IEC 61034-1 & -2; BS EN 61034-2; VDE 0482-1034-1 & -2

Fire performance

- **Flame retardant:** IEC 60332-1; BS EN 60332-1; VDE 0482-332-1
- **No flame propagation:** IEC 60332-3-24; EN 60332-3-24; VDE 0482-266-1 & -2-4
- **Insulation integrity FE180:** IEC 60331-21; VDE 0472-814
- **Circuit integrity:**
BS 6387 C.W.Z. / Ø ≤ 20 mm
BS 7846 Category F2 (Amendment 1 & 2, Annex L.1 / cable Ø > 20 mm)

Advantages

- High safety standard: BS 6387 C.W.Z, fully tested by LPCB / UKAS
- Halogen and silicone free
- Operating temperature 110 °C
- In compliance with RoHS directive
- Mineral filled fire resistant materials
- Space saving installation due to small outer diameter

BETAflam® Fire Resistant Safety Cables**FR-MI 110** 0,6 / 1 kV, acc. to BS 6387 C.W.Z., LSOH**Multicore****Application**

Multicore Power Cable 0.6 / 1 kV for fixed installation in cable systems with improved fire performance and circuit integrity. Use for: Fire Alarm circuits, Fire Detection circuits, Emergency signal / Control circuits, Fire fighting systems (water pumps), Smoke Exhaust Systems etc. Especially recommended in areas where human and animal live as well as valuable property are exposed to risk in case of fire.

Construction

- **Conductor:** Bare annealed copper, acc. IEC 60228 class 2
- **Flame barrier:** MICA tape
- **Insulation:** BETAflam® mineral copolymer, cross-linked
- **Inner covering:** Glass fibre tape
- **Core identification:** See technical information
- **Sheath:** BETAflam® mineral copolymer, orange

Technical specification

- **Rated voltage:** U₀/U 0,6 / 1 kV
- **Test voltage:** 4 kV / 50 Hz
- **Temperature range:**
Operation temperature from -30 °C to +110 °C
Laying temperature from -5 °C to +70 °C
Short circuit temperature +280 °C (temperature peak ≤ 5 s)
- **Bending radius:**
During laying > 12 × outer Ø
Fixed installed > 7 × outer Ø
- **Laying conditions:** For fixed indoor installation in trays, ladders, ducts or concretes. Laying in earth or water only in water-proof dry tubes/ducts. Outdoor use only when protected from direct sunlight and other external impacts.
Special designs with additional UV-, anti termite-, anti rodent- resistance are available on request.

Material properties

- **Halogen free:** IEC 60754-1; BS EN 50267-2-1; VDE 0482-267-2-1
- **No corrosive gases:** IEC 60754-2; BS EN 50267-2-2; VDE 0482-267-2-2
- **No toxic gases:** NES 02-713; NF C20-454; BS EN 50267-2-1
- **Low smoke density:** IEC 61034-1 & -2; BS EN 61034-2; VDE 0482-1034-1 & -2

Fire performance

- **Flame retardant:** IEC 60332-1; BS EN 60332-1; VDE 0482-332-1
- **No flame propagation:** IEC 60332-3-24; EN 60332-3-24; VDE 0482-266-1 & -2-4
- **Insulation integrity FE180:** IEC 60331-21; VDE 0472-814
- **Circuit integrity:**
BS 6387 C.W.Z. / Ø ≤ 20 mm
BS 7846 Category F2 (Amendment 1 & 2, Annex L.1 / cable Ø > 20 mm)

Advantages

- High safety standard: BS 6387 C.W.Z, fully tested by LPCB / UKAS
- Halogen and silicone free
- Operating temperature up to +110 °C
- In compliance with RoHS directive
- Mineral filled fire resistant materials

BETAflam® Fire Resistant Safety Cables**FR-MI 110** 0,6 / 1 kV, acc. to BS 6387 C.W.Z., LSOH**Multicore / Steel Tape Armour (STA)****Application**

Armoured Power Cable 0,6 / 1 kV with improved fire performance and circuit integrity. Suitable for fixed installation in areas with increased demand to mechanical stress. Typical applications: Fire Alarm circuits, Fire Detection circuits, Emergency signal / Control circuits, Fire fighting systems (water pumps), Smoke Exhaust Systems etc. Especially recommended in areas where human and animal live as well as valuable property are exposed to risk in case of fire.

Construction

- **Conductor:** Bare annealed copper, acc. IEC 60228 class 2
- **Flame barrier:** MICA tape
- **Insulation:** BETAflam® mineral copolymer, cross-linked
- **Inner covering:** Glass fibre tape
- **Inner sheath:** BETAflam® mineral copolymer
- **Armouring:** Steel tape armour (STA)
- **Core identification:** See technical information
- **Sheath:** BETAflam® mineral copolymer, orange

Technical specification

- **Rated voltage:** U₀/U 0,6 / 1 kV
- **Test voltage:** 4 kV / 50 Hz
- **Temperature range:**
Operation temperature from -30 °C to +110 °C
Laying temperature from -5 °C to +70 °C
Short circuit temperature +280 °C (temperature peak ≤ 5 s)
- **Bending radius:**
During laying > 15 × outer Ø
Fixed installed > 9 × outer Ø
- **Laying conditions:** For fixed indoor installation in trays, ladders, ducts or concretes. Direct laying in earth or water only in water-proof dry tubes/ducts. Outdoor use if protected from direct sunlight only.
Special designs with additional UV or anti termite-resistance are available on request.

Material properties

- **Halogen free:** IEC 60754-1; BS EN 50267-2-1; VDE 0482-267-2-1
- **No corrosive gases:** IEC 60754-2; BS EN 50267-2-2; VDE 0482-267-2-2
- **No toxic gases:** NES 02-713; NF C20-454; BS EN 50267-2-1
- **Low smoke density:** IEC 61034-1 & -2; BS EN 61034-2; VDE 0482-1034-1 & -2

Fire performance

- **Flame retardant:** IEC 60332-1; BS EN 60332-1; VDE 0482-332-1
- **No flame propagation:** IEC 60332-3-24; EN 60332-3-24; VDE 0482-266-1 & -2-4
- **Insulation integrity FE180:** IEC 60331-21; VDE 0472-814
- **Circuit integrity:**
BS 6387 C.W.Z. / Ø ≤ 20 mm
BS 7846 Category F2 (Amendment 1 & 2, Annex L.1 / cable Ø > 20 mm)

Advantages

- High safety standard: BS 6387 C.W.Z, fully tested by LPCB / UKAS
- Halogen and silicone free
- Operating temperature up to +110 °C
- In compliance with RoHS directive
- Robust cable with increased resistance to mechanical impact

BETAflam® Fire Resistant Safety Cables**FR-MI 110** 0,6 / 1 kV, acc. to BS 6387 C.W.Z., LSOH**Multicore / Steel Wire Armour (SWA)****Application**

Armoured Power Cable 0,6 / 1 kV with improved fire performance and circuit integrity. Suitable for fixed installation in areas with increased demand to mechanical stress. Typical applications: Fire Alarm circuits, Fire Detection circuits, Emergency signal / Control circuits, Fire fighting systems (water pumps), Smoke Exhaust Systems etc. Especially recommended in areas where human and animal live as well as valuable property are exposed to risk in case of fire.

Construction

- **Conductor:** Bare annealed copper, acc. IEC 60228 class 2
- **Flame barrier:** MICA tape
- **Insulation:** BETAflam® mineral copolymer, cross-linked
- **Inner covering:** Glass fibre tape
- **Inner sheath:** BETAflam® mineral copolymer
- **Armouring:** Steel wire armour (SWA)
- **Core identification:** See technical information
- **Sheath:** BETAflam® mineral copolymer, orange

Technical specification

- **Rated voltage:** U₀/U 0,6 / 1 kV
- **Test voltage:** 4 kV / 50 Hz
- **Temperature range:**
Operation temperature from -30 °C to +110 °C
Laying temperature from -5 °C to +70 °C
Short circuit temperature +280 °C (temperature peak ≤ 5 s)
- **Bending radius:**
During laying > 15 × outer Ø
Fixed installed > 9 × outer Ø
- **Laying conditions:** For fixed indoor installation in trays, ladders, ducts or concretes. Direct laying in earth or water only in water-proof dry tubes/ducts. Outdoor use if protected from direct sunlight only. Special designs with additional UV or anti termite-resistance are available on request.

Material properties

- **Halogen free:** IEC 60754-1; BS EN 50267-2-1; VDE 0482-267-2-1
- **No corrosive gases:** IEC 60754-2; BS EN 50267-2-2; VDE 0482-267-2-2
- **No toxic gases:** NES 02-713; NF C20-454; BS EN 50267-2-1
- **Low smoke density:** IEC 61034-1 & -2; BS EN 61034-2; VDE 0482-1034-1 & -2

Fire performance

- **Flame retardant:** IEC 60332-1; BS EN 60332-1; VDE 0482-332-1
- **No flame propagation:** IEC 60332-3-24; EN 60332-3-24; VDE 0482-266-1 & -2-4
- **Insulation integrity FE180:** IEC 60331-21; VDE 0472-814
- **Circuit integrity:**
BS 6387 C.W.Z. / Ø ≤ 20 mm
BS 7846 Category F2 (Amendment 1 & 2, Annex L.1 / cable Ø > 20 mm)

Advantages

- High safety standard: BS 6387 C.W.Z, fully tested by LPCB / UKAS
- Halogen and silicone free
- Operating temperature up to + 110 °C
- In compliance with RoHS directive
- Robust cable with increased resistance to mechanical impact

BETAflam® Fire Resistant Comms Cables screened**FR-MI 110** 300 / 500 V, acc. to BS 6387 C.W.Z.**Comms Cables – Shielded/Unshielded Twisted Pair (S/UTP)****Application**

Shielded communication cable 300 / 600 V for fixed installation in cable systems with excellent fire performance and circuit integrity. For Fire Alarm Circuits, Fire Detection Circuits, Emergency Signal / Control Circuits, Fire Fighting Systems (water pumps) and Smoke Exhaust Systems etc. Especially recommended in areas where human and animal live as well as valuable property are exposed to risk in case of fire.

Construction

- **Conductors:** Tinned annealed copper, acc. IEC 60228 class 2
- **Flame barrier:** MICA tape
- **Insulation:** BETAflam® mineral copolymer, cross linked
- **Inner covering:** Glass fibre tape
- **Screening:** Aluminium laminated foil with drain wire
- **Sheath:** BETAflam® mineral copolymer
- **Core identification:** White cores with black number marking (other colours on request)
- **Sheath colour:** Red or Orange (other colours on request)

Technical specification

- **Rated voltage:** U₀/U 300 / 500 V
- **Test voltage:** 0.5 / 2 kV / 50 Hz (core-screen / core-core)
- **Temperature range:**
Operation temperature from -30 °C to +110 °C
Laying temperature from -5 °C to +70 °C
Short circuit temperature +250 °C (temperature peak ≤ 5 s)
- **Bending radius:**
During laying > 12 × outer Ø
Fixed installed > 8 × outer Ø
- **Laying conditions:** For fixed indoor installation in trays, ladders, ducts or concretes. Laying in earth or water only in water-proof dry tubes/ducts.
Outdoor use only when protected from direct sunlight and other external impacts.

Material properties

- **Halogen free:** IEC 60754-1; BS EN 50267-2-1; VDE 0482-267-2-1
- **No corrosive gases:** IEC 60754-2; BS EN 50267-2-2; VDE 0482-267-2-2
- **No toxic gases:** NES 02-713; NF C20-454; BS EN 50267-2-1
- **Low smoke density:** IEC 61034-1 & -2; BS EN 61034-2; VDE 0482-1034-1 & -2

Fire performance

- **Flame retardant:** IEC 60332-1; BS EN 60332-1; VDE 0482-332-1
- **No flame propagation:** IEC 60332-3-24; EN 60332-3-24; VDE 0482-266-1 & -2-4
- **Insulation integrity FE180:** IEC 60331-21; VDE 0472-814
- **Circuit integrity:**
BS 6387 C.W.Z. / Ø ≤ 20 mm
BS 7846 Category F2 (Amendment 1 & 2, Annex L.1 / cable Ø > 20 mm)

Advantages

- High safety standard: BS 6387 C.W.Z, fully tested by LPCB / UKAS
- Halogen and silicone free
- Operating temperature up to + 110 °C
- In compliance with RoHS directive
- Mineral filled fire resistant materials

Core Colours:

- Phase: Brown, Black, Grey
- Neutral: Blue
- Earth: Green/Yellow

- 2 With 6 or more conductors the phase cores are of Black colour and White numbering, sequence from the inside to the outside. The earth conductor is always the last and the neutral conductor the second last core of the outer layer.
The numbering sequence of the stranded conductors shall be the same at any cut end of the cable.

Environmental and Fire Performance

Halogen free

The halogens are the elements of the 7th group in the Periodic Table of Elements: chlorine (Cl), fluorine (F), bromine (Br), iodine (I).

Halogen free cables must be free of chlorine, fluorine and bromine (PVC cables contain halogen, PVC = Polyvinylchloride).

The halogens are an integrated component of many acids

- HCl = Salt acid (hydrochloric acid)
- HF = Hydrogenfluorid
- HBr = Hydrogenbromid

The most popular plastic containing halogens is PVC (polyvinylchloride). In case of fire or at high temperature PVC starts to degrade. Hydrochloric acid and other fission products are generated and leads to extremely aggressive corrosion. Therefore the current trend is to replace the halogen containing plastics with halogen free ones. For instance PVC is currently being replaced at a large scale with polyolefin i.e. polyethylene.

Thanks to halogen free cables the formation of corrosive and toxic gases can be prevented.

Test procedures

1000 mg of the testing material must be fixed at one termination of an annealed copper wire in a gas flame.

Requirement

The material is considered to be halogen free if no green to blue-green flame discolouration occurs. The chlorine and the bromine would cause such a discolouration, however the existence of fluorine cannot be proven like that.

Test standards

IEC 60754-1; BS EN 50267-2-1; VDE 0482-267-2-1

Degree of acidity of combustion gases

Corrosive gases act with moisture to produce aggressive acids which corrode metal parts and cause extensive long-term damage, even though the fire damage may only be limited; this is because corrosive gases often spread throughout a building through the ventilation system or withing installation system. The damage may not be limited to the area immediately affected by the fire. Electronic units and electronic contacts are particularly endangered, as are free-standing or concrete enclosed steel constructions.

Test procedures

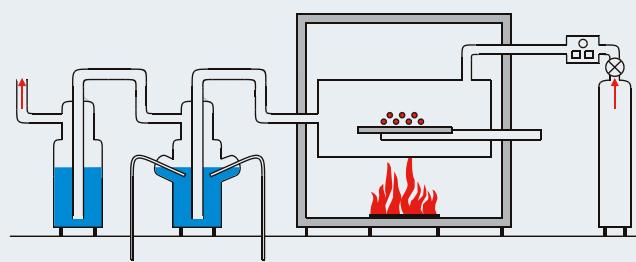

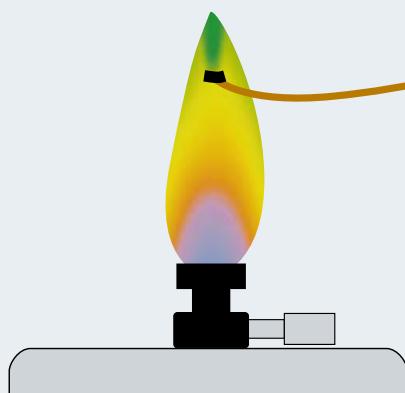

1000 mg insulation material is burned in a combustion furnace at $\geq 935^{\circ}\text{C}$ with pre-defined air supply for over 30 minutes. By means of two gas washing containers, held in the airflow the conductivity and the pH-value are measured. Like that even small quantities of halogen containing substances can be detected and proven.

The test is considered to be passed when

- the pH-value $> 4,3$
- the conductivity $< 10 \mu\text{S/mm}$

Test standards

IEC 60754-2; BS EN 50267-2-2; VDE 0482-267-2-2

Smoke density

The formation of smoke has several unpleasant consequences. On one hand it considerably lowers the visibility in a fire event, thus endangering the people trapped inside closed rooms escape of and the efforts of the firemen to carry on their rescue and fire fighting actions. On the other hand it produces smoke poisoning because of the carbon monoxide. Regarding the formation of the combustion gases the PVC comes off quite badly.

Test procedures

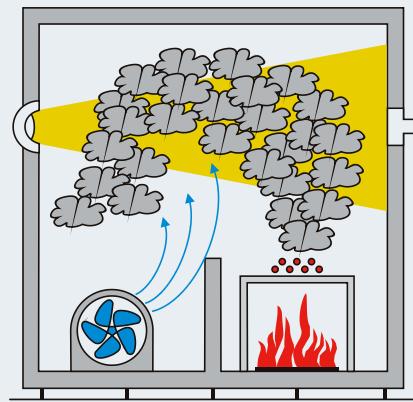

The density of smoke emission can be determined by measuring of the light penetrability. Cable samples are lit with alcohol in a test chamber (cubical with an edge length of 3 m). The so formed smoke is uniformly spread by a ventilator and influences the light measuring section.

The test is considered to be passed when the following light penetrability is reached:

| Dangerous level | Requirements |
|-----------------|--------------|
| HL 1 | — |
| HL 2 and HL 3 | 60 % |
| HL 4 | 70 % |

Test standards

IEC 61034-1/-2; BS EN 61034-1/-2; VDE 0482-1034-1/-2

Flame retardant

Flame retardant cables are cables which, when installed as a single cable, although ignitable on exposure to flame source, will greatly reduce flame spread and self-extinguish once the flame source is removed.

However in a vertical cable bundle, e.g. in vertical risers, fire can spread along the cables (chimney effect). In order to avoid this danger, the so called «no flame propagating» cables should be used.

Test procedures

This test procedure describes the minimum requirements for flame retardant cables and it is valid for lead wires or on single cables only.

A lead wire or a cable is being aflamed with a propane-air-burner (1 kW flame).

Test duration

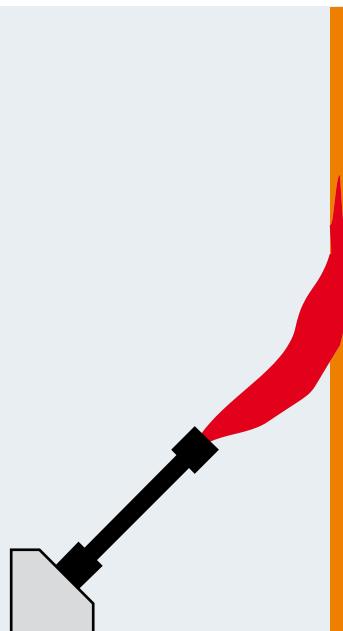

- $\varnothing \leq 25$ = 60 s
- $\varnothing 25 \dots 50$ = 120 s
- $\varnothing 50 \dots 75$ = 240 s
- $\varnothing > 75$ = 480 s

The burning cable should self-extinguish as soon as the fire source has been removed. The fire damage may not be higher than 60 cm.

The test is considered to be passed if the sample has not burned and the damage (carbonisation) has not reached any of the terminations of the sample (> 50 mm).

Test standards

IEC 60332-1, EN 60332-1, VDE 0482-332-1,
BS 6387:1994 clause 10 , BS EN 60332-1

No flame propagation

No flame propagating cables are those which can be ignited by a flame source, however they do not allow the fire to spread even if the cable bundle is placed vertically; they are self extinguishing once the fire source is removed.

Test procedures

This test simulates the chimney effect in vertical cable installations. In a standardized cabinet the cable bundle is kept in a burner fire for 20 - 40 minutes (gas burner $75 \pm 5 \text{ MJ/h}$). Thereby the temperature is kept constant at 750°C . Depending on the volume of the non-metal (combustible) materials per running meter it can be differentiated in the categories A F/R, A, B, C und D as follows.

| Category | A F/R | A | B | C | D |
|-----------------------------------------------------------------|-------|----|-----|-----|-----|
| ■ Liter (dm^3) of insulation material per 1 m sample | 7 | 7 | 3.5 | 1,5 | 0,5 |
| ■ Aflame time (min) | 40 | 40 | 40 | 20 | 20 |

The cables must self-extinguish after removing the fire source. The fire may not have propagated any further than 2,5 m from the burner. With the cables of LEONI Studer AG this should reach no further than 50 to 60 cm.

Test standards

| Category | IEC | EN | VDE 0482 |

| D | 60332-3-25 | 60332-3-25 | part 266-2-5 |
| Apparatus | 60332-3-10 | 60332-3-10 | part 266-1 |

Circuit integrity under fire

The circuit integrity indicates, how long a free cable retains its isolation in a fire without causing a short-circuit. According to its international standard, a cable is laid horizontally over a burner for three hours. The temperature is set at 750°C . The circuit integrity is designated with FE (e.g. FE180 = circuit integrity of 180 min): BETAflam FE180 / E30

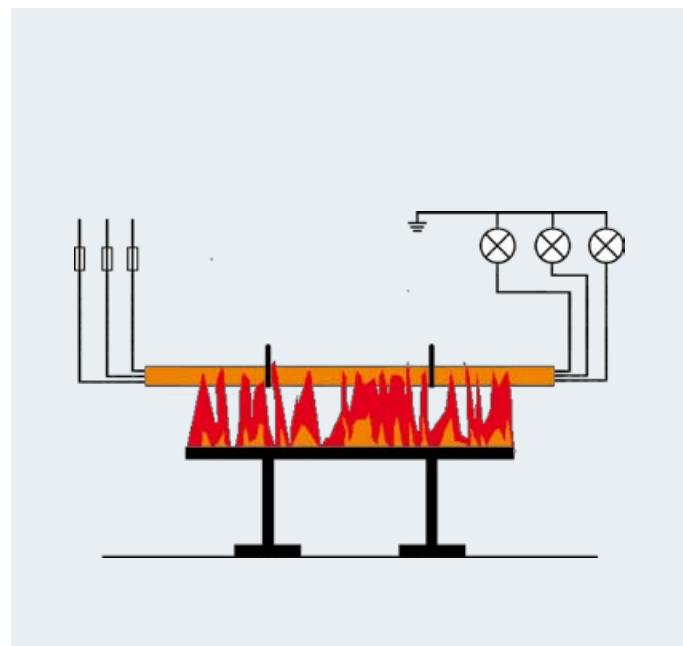

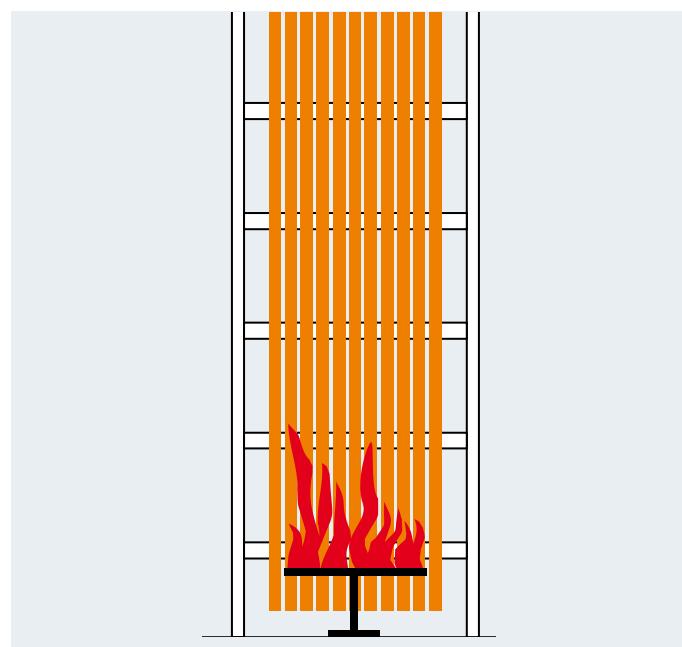

Test procedures

The sample is fastened at defined distances above the burner. The conductor is connected to a power source at nominal voltage via an 2 A fuse.

The test is considered to be passed, if during the test no short circuit or circuit interruption occurs.

Test standards

DIN VDE 0472-814
IEC 60331-11 Apparatus 750°C
IEC 60331-21 Cables rated up to 0,6 / 1,0 kV

Circuit integrity with mechanical shock

Cables for emergency circuits up to 20 mm diameter are subject and tested to fire with mechanical shock during a survival time of maximum 90 minutes.

Test procedures

A single cable is fixed to a test panel under conditions of minimum bending radii and is tested at a minimum test temperature of 830 °C and impacts on the test panel supporting the cable. During the test no rupture of conductors shall appear and voltage must be maintained.

For the purposes of the European Construction Products Directive, the survival time serves to classify the cables into PH classes.

The test is considered to be passed, if during the test no short circuit or circuit interruption occurs.

Test standards

DIN EN 50200, classes PH 15, 30, 60, 90

VDE 0482-200

IEC 60331-12 Apparatus 830 °C

IEC 60331-31 Fire with shock, up to 0,6 / 1,0 kV

System integrity

Maintaining the functionality of cable installations in event of fire. The test involves the cable and the laying resp. fastening system.

Test procedures

The cables are installed with the laying/fastening system in a testing oven with a minimum length of 3 m. The conductors are connected to a 400 V (for control cables 110 V) power source and fused with 2 A.

The heat induced increase in conductor resistance is not taken into account during the test.

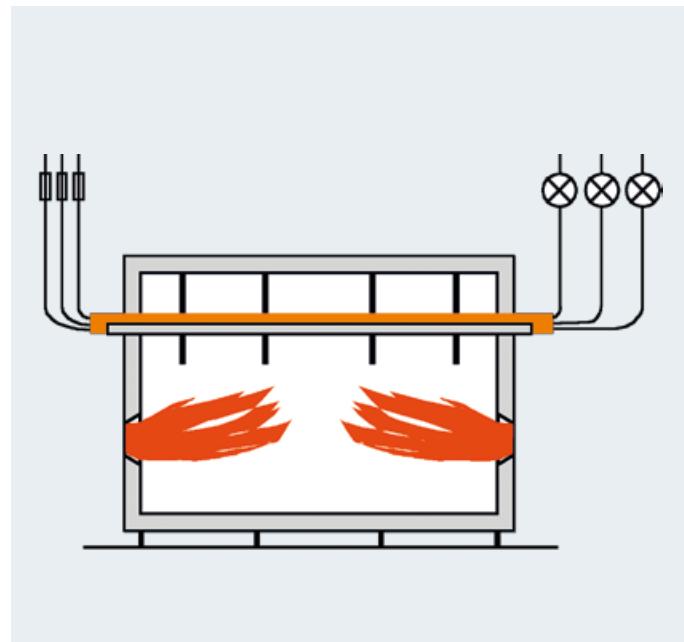

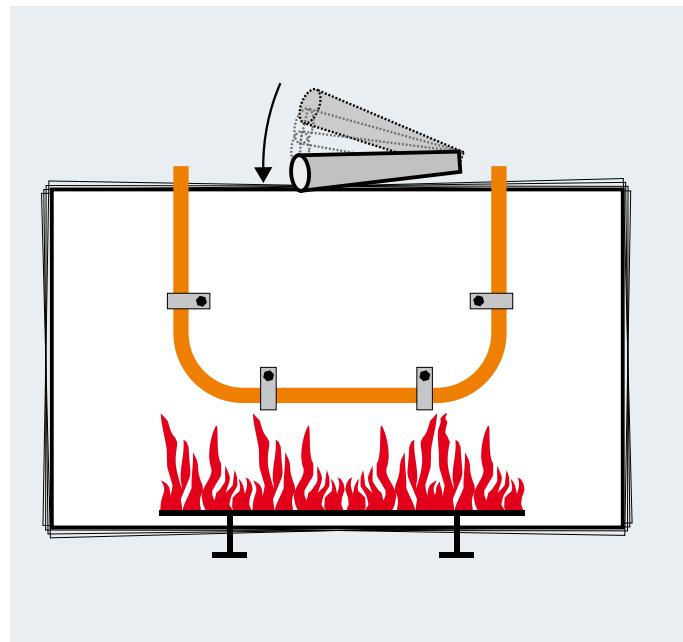

The test is considered to be passed, if during the test no short circuit or circuit interruption occurs.

Test standard DIN 4102 part 12:1998-11

■ E30 850 °C to 900 °C for 30 min

■ E60 850 °C to 970 °C for 60 min

■ E90 850 °C to 1000 °C for 90 min

Resistance to fire alone

When the cable sample is tested, no fuse shall be ruptured nor any lamp extinguished during the period of the test.

Test procedures

The cable is held horizontally by suitable clamps and adjusted to the metal support rings above the burner.

Each conductor is connected to a transformer output with a 3 A fuse and adjusted to the rated voltage.

The test is considered to be passed, if during the test no short circuit or circuit interruption occurs.

Test standard BS 6387:1994

- Test A 650 °C for 3 h
- Test B 750 °C for 3 h
- Test C 950 °C for 3 h
- Test S 950 °C for 20 min

Resistance to fire with water

When the cable sample is tested, no fuse shall be ruptured nor any lamp extinguished during the period of the test.

Test procedures

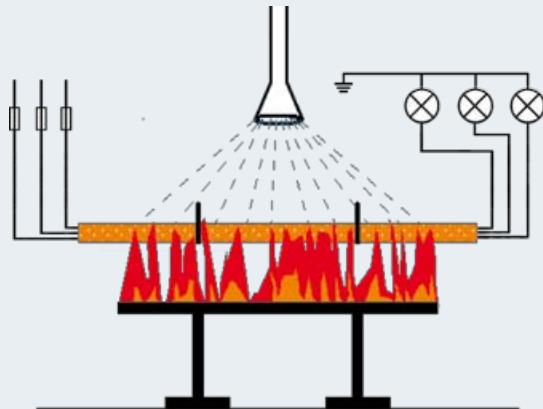

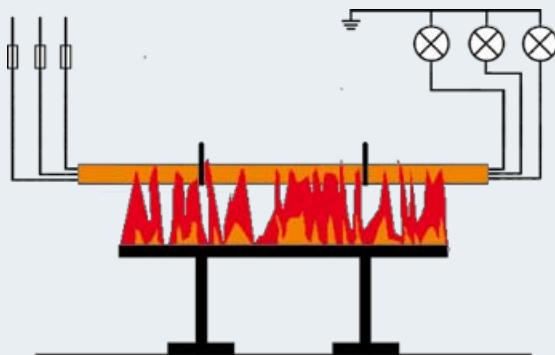

The cable is held horizontally by suitable clips above the burner.

Each conductor is connected to a transformer output with a 3 A fuse and adjusted to the rated voltage.

The test is considered to be passed, if during the test no short circuit or circuit interruption occurs.

Test standard BS 6387:1994

- Test W 650 °C for 30 min
 - first 15 min burner only
 - second 15 min burner with water sprinkler turned on

Resistance to fire with mechanical shock

When the cable sample is tested, no fuse shall be ruptured nor any lamp extinguished during the period of the test.

Test procedures

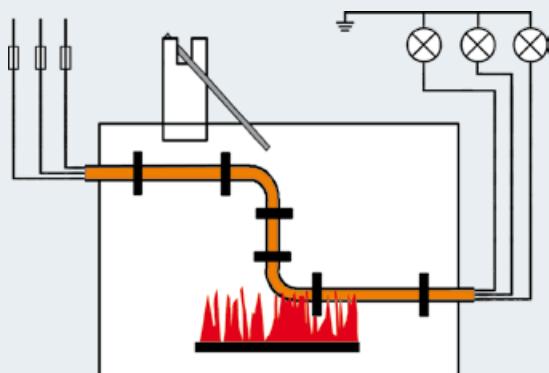

The cable is bent and mounted to the vertical wall using clips.

Each conductor is connected to a transformer output with a 3 A fuse and adjusted to the rated voltage.

The test is considered to be passed, if during the test no short circuit or circuit interruption occurs.

Test standard BS 6387:1994

- Test X 650 °C for 15 min
- Test Y 750 °C for 15 min
- Test Z 950 °C for 15 min

| Limited Oxygen Index | ASTM D 2863 | EN ISO 4589-2 | | NES 714 |

Duration of system circuit integrity in the building laws

The duration of the system circuit integrity depends on how long the supply of electrical services must continue in the event of a fire. National legislations in most countries provide requirements for safety systems which have to be met.

Evacuation

In many countries a duration of 30 minutes is considered sufficient for alarm and evacuation of people.

Compliance with this requirement with regard to the systems (fire alarm systems, emergency lighting, passenger hoists, smoke exhaust, voice alarm and acoustic signalling, escape route signalling) can be achieved by means of a «Class E30» cable system.

For special buildings like high-rise buildings, hospitals, shopping centres, tunnels, prisons, a duration of 60 to 90 minutes can also be adequate. In this case a «Class E60» or even «E90» cable system could be required (e.g. for the supply of lifts for in-patients etc.).

Fire fighting

Besides rescuing time for people extra time for the work of the fire brigades must be allocated. Mostly 90 minutes after the fire starts are regarded sufficient for fire fighting. The uninterrupted power supply of the electrical systems used for this (e.g. sprinkler water pumps, mechanical smoke exhausts, firemen lifts) can be attained with «Class E90» cable systems.

Planning

Planning an electrical safety system means finding answers to the questions:

- Which parts of the building requires which level of safety?
- Which electrical system has to operate for how long?
- Which circuits are involved (safety circuits)?
- Which is the best cable routing for these circuits?
- Are there restrictions concerning fire load, etc.?

Only then the selection of appropriate cables and support systems can begin.

General Conditions of Sale and Delivery of LEONI Studer AG, Däniken

Valid July 2007 (replaces all previous versions)

Unless agreed to the contrary, the following conditions shall apply to all deliveries:

1. Conclusion of contract

- 1.1 These General Conditions of Sale and Delivery shall be deemed to be accepted at the latest upon acceptance of our goods. Amendments to any of these Conditions of Sale and Delivery shall be invalid unless confirmed by LEONI Studer AG in writing.
- 1.2 All our offers are prepared on the basis of the details or planning materials placed at our disposal or transmitted to LEONI Studer AG. Our offers shall no longer be binding if details, dimensions or plans are subsequently amended. Unless otherwise agreed in writing, the prices and conditions offered shall remain valid only as long as the raw material costs remain unchanged; increases in the prices of raw materials occurring before the definitive award of the contract will be charged additionally. Brochures and catalogues shall not be binding unless agreed elsewhere in writing. Details contained in technical documentation shall only be binding if they have been expressly promised by LEONI Studer AG in a separate written contract.
- 1.3 An order shall only be valid upon confirmation by us in writing. If the goods ordered are on stock, the order shall be deemed to be accepted if it is received by LEONI Studer AG and not refused within one working day; basic agreement orders remain reserved. Our confirmations of order shall be checked in detail. Any discrepancies must be notified to LEONI Studer AG within three working days at the latest after the date of the confirmation of order. Silence on the part of the purchaser until the expiry of this period shall be deemed to be acceptance of our order confirmation. After expiry of this period, we shall be free to manufacture and invoice the goods ordered in accordance with the order confirmation.
- 1.4 Any requests for changes received after the contract has been concluded may only be taken into account if we are able to agree to a change in the light of the state of the preliminary works. The costs and delivery delays resulting from such subsequent changes shall be borne by the purchaser.
- 1.5 If any of the provisions of these Conditions of Sale and Delivery shall prove to be null and void or non-binding in whole or in part, such nullity or non-binding character shall only apply to the provision concerned. Such null and void or non-binding provision shall be replaced by such substitute solution that comes closest to the intended purpose of the null and void or non-binding provision in question.

2. Termination of contract by the supplier

If LEONI Studer AG wishes to terminate the contract, it shall inform the purchaser immediately after discovery of the significance of the event; this shall also apply if an extension of the delivery period has initially been agreed. In the event of a termination of the contract, we shall be entitled to remuneration for those deliveries and services already rendered. The purchaser shall not be entitled to any claims for damages by virtue of such termination of contract.

3. Exclusion of further liability of the supplier and consequential losses

The cases of substantial breach of contract, the legal consequences thereof and all claims by the purchaser for whatever legal reason are regulated definitively in these Conditions. In particular all claims for damage, diminution, termination of the contract or withdrawal from the contract not expressly specified shall be excluded. In no case shall the purchaser be entitled to claims for compensation for damage which has not been incurred by the delivered item itself, such as loss of production, loss of use, loss of orders, lost profit and other direct or indirect losses. These restrictions shall not apply in the case of unlawful intent or gross negligence on the part of LEONI Studer AG, but they shall also apply in the case of unlawful intent or gross negligence on the part of auxiliary personnel.

4. Supplier's right of recourse

Should any person be injured or third party property be damaged as a result of the

acts or omissions of the purchaser or its auxiliary personnel, and should claims be made against LEONI Studer AG on this basis, the latter shall have a right of recourse against the purchaser.

5. Order quantity

- 5.1 Shortage- or excess lengths of +/- 10 % are permitted.
- 5.2 We are allowed to deliver in different part lengths, because of production and commercial reasons. The accuracy of measuring is +/- 0.5%.

6. Details of dimensions and weight and structural variations

All details of diameters and weights of products are without obligation and are approximate. We reserve the right to make variations in the structure of products for production or raw material reasons.

7. Prices

- 7.1 The prices for deliveries within Switzerland are exclusive of VAT, without spools but with packaging, carriage paid to the recipient for rail parcels or to the Swiss destination station for wagonloads. For deliveries up to 30 kg by post or parcel service, the purchaser shall be charged for the entire postage. For small quantities an additional processing fee will be charged based on the actual valid price list.
- 7.2 The prices for deliveries abroad are ex works (Incoterms 2000), including packaging and non-returnable packing containers plus applicable taxes and other levies. If dispatched on spools of Kabeltrommel GmbH & Co. KG, D - 51005 Cologne (KTG), the provision of Art. 12.3 shall be complied with. The list of prices for deliveries abroad include a fixed basic metal price which may vary in the individual product segments. The calculation basis for the metal selling price shall be the price on the relevant metal exchange on the day preceding the receipt of the order. A metal cost procurement supplement may be charged. The selling price shall be increased or reduced by the difference between the basic metal price and the metal exchange price.

8. Terms of payment

- 8.1 The period of payment shall be 30 days net for all deliveries after date of invoice. Deductions of discounts without entitlement shall be reclaimed.
- 8.2 We reserve the right to request payment in advance and immediate payment.
- 8.3 In the event of a delay in payment, we reserve the right to withhold planned deliveries and to charge interest on arrears at the usual bank discount rate applicable at the place of our company's head office, at least, however, 0,6 % per month.
- 8.4 Payments shall be made by the purchaser to our domicile in cash or by bank transfer free of deductions for charges, taxes or fees, and excluding set-off against other claims. In the case of payment by cheque or bill of exchange, the collection charges, the discount charges and interest shall be refunded to us.
- 8.5 The date of payment shall be deemed to be the date on which the money is at our disposal.
- 8.6 In the event of a failure to comply with our terms of payment for goods supplied, we reserve the right to withdraw from the contract (Swiss Code of Obligations, art. 214).

9. Delivery period and delivery delay

- 9.1 The delivery dates confirmed by us shall be ex Däniken works and shall be specified such that they can normally be met. A delivery delay resulting from force majeure, operating interruptions, difficulties in the procurement of materials and the like shall not entitle the purchaser to withdraw from the contract nor represent grounds for compensation for direct and indirect losses caused by the delay.
- 9.2 The purchaser shall be entitled to claim compensation for delays which are demonstrably due to our fault and where the purchaser can furnish evidence of

direct losses resulting from this delay. If the purchaser receives a substitute delivery, the claim for compensation for delay shall be forfeit.

- 9.3 Compensation for delay shall amount to 0,5 % for each full week of the delay, and shall be limited to a total of 5 % of the contractual price for the delayed part of the delivery. The first two weeks' delay shall not give rise to any claim to compensation for delay.

10. Dispatch, transport and insurance

- 10.1 Special wishes concerning dispatch, transport and insurance shall be notified to us in good time. Transport shall always be at the purchaser's risk. Complaints in connection with the dispatch or transport shall be addressed by the purchaser to the last haulage contractor without delay after receipt of the delivery or the freight documents; the goods being complained of are to be accepted with reservations.
- 10.2 The purchaser shall be responsible for insurance against damage of any kind.

11. Transfer of benefit and risk

- 11.1 Benefit and risk shall pass to the purchaser when the consignment (goods and packaging) leave the works or are ready for dispatch or collection, even if the place of dispatch is not the place of performance.
- 11.2 If dispatch is delayed at the purchaser's request or for other reasons for which we are not responsible, the risk shall pass to the purchaser at the time originally intended for delivery ex works. From this time on, the deliveries shall be stored and insured at the purchaser's cost and risk.

12. Loaned spools and packaging

- 12.1 Cardboard, plastic and paper packaging is included in the price for all deliveries.
- 12.2 For deliveries within Switzerland, dispatch spools will be made available to purchasers free of charge for a maximum of 6 months from the date of delivery. The loaned spools shall be returned at our expense either by LEONI Studer AG's own trucks, by hauliers authorised by LEONI Studer AG or by Cargo Domizil. The spools must be in good condition. The purchaser shall be liable for loss or damage. After expiry of the 6 months period, we shall send a reminder concerning the loaned spools, after which they shall be charged to the purchaser.
- 12.3 If delivery is made on the spools of KTG, KTG shall charge for the spool rental directly in accordance with their conditions. After becoming free, these spools shall be notified to KTG as being free. The appropriate conditions of KTG shall be deemed to be an integral part of our General Conditions of Sale and Delivery and shall be sent on request.

13. Warranty / complaint

- 13.1 The purchaser shall examine the objects delivered immediately upon arrival for shortages and obvious defects. These shall be notified in writing within 10 days after arrival of the goods, with details of the order and delivery note number, failing which no right may be derived from such defects.
- 13.2 If significant defects are established or if a test shows that the agreed construction conditions have not been fulfilled, we shall supply a replacement free of charge within a reasonable period of time, provided that we are responsible for the faults.
- 13.3 For all LEONI Studer AG cables, we warrant a perfect finish of the material supplied for a period of two years. The warranty shall begin upon dispatch of the delivery ex works or with start-up if we are responsible for installation. In particular, we assume the following liability for defects: all faults for which we are responsible and which are reported to us within the said period without delay and which under normal conditions with proper handling have led to disruption shall be remedied as quickly as possible at our expense by means of repair or replacement of the defective part. The parts replaced shall become our prop-

erty. However, we shall only be responsible for such faults as shall be demonstrably attributable to material defects or faulty workmanship of LEONI Studer AG. If the laying did not take place through our personnel or under our supervision, or if fittings of third-party origin are incorporated in the cables by the purchaser, we shall, in case of doubt, be entitled to regard third-party fault as the cause of the disruption. We shall not accept any claims based on the faults beyond the obligation to replace as described above, in particular claims for compensation for indirect losses. In the event that a defective stretch of cable is replaced, the warranty does not apply to the remaining network. More extensive claims for direct or indirect losses shall be excluded.

14. Returns

Goods returned for reason of non-use, unsuitable length etc. shall only be accepted on the basis of a prior written agreement. Expenses incurred shall be deducted from credit notes. No credit can be given for goods not in accordance with the catalogue, goods supplied according to particular specifications, goods used rarely or no longer, or incomplete goods or goods no longer in perfect condition.

15. Laying and installation

If laying and installation are an integral part of our scope of performance, they shall be carried out in accordance with separate installation conditions. The liability shall apply in each case only to such parts as are supplied by us, except for a faulty installation of the equipment or parts of the equipment caused by us.

16. Proprietary rights

Technical materials such as drawings, descriptions, illustrations and the like are our intellectual property and may be neither copied nor reproduced nor made available to third parties or rival companies without our express consent. The purchaser shall bear all risks if third party proprietary rights are infringed by a delivery according to its drawings or other details.

17. Reservation of title

- 17.1 We reserve title to the delivery until it has been paid in full. The purchaser shall be obliged to take the measures necessary for the protection of our title.
- 17.2 We shall be entitled to have the reservation of title entered in the appropriate register with the co-operation of the ordering party.

18. LEONI Social Charter

The purchaser is obligated to respect the Declaration on Social Rights and Industrial Relationships at LEONI (LEONI Social Charter). The purchaser has access to the LEONI Social Charter via the website of LEONI (www.leoni.com) or may request a copy of the LEONI Social Charter from LEONI Studer AG at any time. Any serious infringement or recurrent infringements of the LEONI Social Charter by the purchaser establishes the right of LEONI Studer AG to termination without cause and notice for individual as frame contracts with the purchaser.

19. Applicable law and legal venue

- 19.1 Swiss substantive law shall apply to the exclusion of the UN-Convention on Contracts for the International Sale of Goods.
- 19.2 The legal venue for all disputes in connection with this contract shall be Olten, Switzerland. However, we also reserve the right to assert our rights at the purchaser's domicile.

Däniken, July 2007

Further products

BETAterm®

- Premium, halogen free and electron-beam cross-linked lead wires
- Temperature resistant, increased dielectric strength, easy stripping

BETAflam® flex

- Premium flexible connection and power cables
- Good resistance to aggressive media, halogen free and flame retardant

BETAflam® CHEMAflex®

- Oil and chemical resistant connection and power cables
- Temperature resistant, halogen free, flame retardant, easy stripping

BETAtrans®

- Premium flexible halogen free connection and power cables
- Excellent mechanical and dielectric strength

BETAflam® Solar

- Double insulated lead wires
- Electron-beam cross-linked and halogen free
- For solar power applications

BETAjet®

- 400 Hz ground power cable systems
- For mobile and static applications
