

MegaLine® cabling systems in copper

for DataCenter · Office · Industry · @home

The Quality Connection

LEONI

MegaLine® cabling systems

The range of products encompasses everything from the in-house production of copper data cables, ready-made patch cords and trunk cables with connection components through to complete cabling systems.

Everything from a single source >>

With its product spectrum in copper cable and connectivity, LEONI provides future-proof cabling systems for data center, floor and workplace cabling.

Welcome to the mega-store for cable and system solutions

All necessary planning documentation available online:
www.leoni-data.com

Subject to technical modifications, misprints and errors.

Safety instructions

Cables are to be used for the designated applications only.

Waiver

The specifications in this document are provided acc. to our best current knowledge. However, these specifications may not be considered an assurance of specific properties or suitability for specific purposes of the respective products. Such indications may not be interpreted as a misguidance for the violation of property rights or as an assurance of a corresponding license. The suitability of each product for any particular purpose must be checked beforehand with our specialists. Our policy is to continuously improve our materials and products. Therefore, we reserve the right to offer alternatives consistent with our manufacturing programme at the time of enquiry.

All information concerning material properties, fire performance, construction, electrical and technical data, prices etc. reflects our current level of knowledge and is provided on a non-binding basis. Dimensions and weights are indicative only. All specifications can be changed at any time without prior notification.

General conditions of sale and delivery

We refer to the currently valid General Conditions of Sale and Delivery which can be obtained from the respective companies.

Definitions

Some of the terms used in this document are not used consistently in the industry. To promote mutually intelligible business relationships and customer communications, however, LEONI strives to ensure consistent term usage. To avoid difficulties with interpretation, we refer you to www.leoni.com/en/company/copper-business/, where we have provided definitions of the terms that we use. The version applicable at the time of handover for this document is authoritative. These definitions form part of the contract. Insofar as terms defined there are used in this document, they have the meanings as defined there. We will also be happy to send you the definitions on request.

The LEONI Group

Intelligent solutions for energy and data management

LEONI is a global provider of products, solutions and services for energy and data management in the automotive sector and other industries. The group of companies, listed on the German MDAX index, has more than 86,000 employees in 31 countries and generated consolidated sales of EUR 4.9 billion in 2017.

LEONI's largest customer group comprises the global car, commercial vehicle and component supply industry. LEONI furthermore supplies products and services to these markets: data communication & networks, healthcare, process industry, transportation, energy & infrastructure, factory automation, machinery & sensors as well as marine. An integrated network for research & development, production as well as distribution and service gives customers the assurance of tailor-made support at more than 90 locations around the globe. LEONI operates as a solutions provider with pronounced development and systems expertise.

Innovative solutions based on development and systems partnership

Especially in the automotive industry, LEONI offers substantial added value to motor vehicle manufacturers in both technological and commercial terms by being an innovation partner based on profound understanding of the overall system and by being involved in the early stages of development. In addition to standard and special cables as well as custom-developed wiring systems and related components, the Company's offering

also includes software solutions and such services as architecture design and simulation. LEONI concentrates its automotive research and development work on the sector's major trends – such as electromobility, autonomous driving and connectivity – enhanced by lightweight construction solutions, multi-voltage and function integration, but also by logistics and engineering expertise.

Digital transformation thanks to intelligent products and smart services

LEONI pursues the aim of becoming a leading solutions provider of intelligent systems for the megatrends of energy transmission and data management. To achieve this, the Company's offering will in the future also include intelligent cables, cable systems and components – which is gaining importance particularly in the wake of digitalization and the development of fail-safe systems with a high level of connectivity. The Company is consequently enhancing its know-how in such fields as electronics, sensor technology and big data, and provides such customised smart services as predictive maintenance and error analyses. The digital transformation within LEONI manifests itself in digital processes and software expertise, which is used, for instance, to implement more automated production. Together with international customer networks and strategic partnerships, this is creating new, digital business models – individually tailored to customers' requirements.

Keeping you connected tomorrow

Business Unit Datacom

LEONI's Business Unit Datacom ensures first-class, reliable data cabling in buildings and data centers. Numerous innovations and developments of today are already setting the standards of tomorrow.

Copper and fiber-optic cabling combined with specifically adapted system technology create data networks that maximise the operational performance of our customers. By always keeping the benefit and value for our customers in mind, we create solutions that facilitate next-generation technology migrations.

As globalisation, urbanisation and networking continue to expand, the technical requirements for materials, manufacturing processes and logistics grow more demanding. Last but not least, project cost pressures are also increasing. Cost-saving potential is tapped into throughout the entire planning and implementation process. and the sooner this

is incorporated into the process, the greater the volume of potential savings. LEONI is your partner here, helping to achieve optimisation from the earliest project phases such as planning, through to implementation and commissioning.

Put your trust in the best partner to suit your needs. Cabling, connectivity and complete cabling solutions from a single source, for investors, integrators, designers, installers and dealers.

This includes copper and fiber optic system solutions being extended by LEONI-branded halogen-free energy cables.

Continuous innovations in safety, environmental compatibility and energy efficiency complete the list of customer benefits. Offering on-site consultations and a wealth of experience, LEONI is your internationally-recognised project partner.

For further information, see www.leoni-data.com

Great brands, great service

Rely on the best partner to meet your needs

Our commitment to developing innovative products proves our dedication to our responsibility. In conjunction with our consulting services, we establish trust as we help our partners accomplish maximum safety for people and infrastructure.

Installers and retail receive their cabling, connectivity and complete cabling solutions from a single source. This includes system solutions in copper, aluminium and fiber optic technology as well as halogen-free energy cables with or without circuit integrity. Continuous innovations in safety, environmental compatibility and energy efficiency complete the list of customer benefits.

A global presence and consulting on site during all stages of a project as well as extensive experience gained from numerous projects and far-reaching synergies inside and outside the LEONI Group make us one of the most highly regarded partners in the field of building and infrastructure cabling at the international level.

Datacom – for maximum data integrity and bandwidth

From the very beginning of the digital data era, we have fulfilled data networking requirements for both the short term and the far future by using great innovation and a forward-looking approach. The profound expertise of the **Infrastructure & Datacom** Business Unit in copper and fiber optical cabling technologies represents a powerful advantage in structured cabling systems for industry, data centres and offices – the sustainable copper and glass fiber cables of our own production are among the safest and most innovative products in the primary to tertiary cabling market.

Universal use with extremely high functional integrity

Our development and production centres

LEONI Studer (CH) and LEONI Kerpen (D) have one thing in common above all else : expertise. In extensive production areas, we work with state-of-the-art methods and systems in plastics processing, materials processing, extrusion technology, electron beam cross-linking and testing the entire range of products.

We use state-of-the-art production equipment to ensure that we can offer our customers the highest possible levels of product safety and quality. New and innovative plastics mixtures and cables are constantly being developed in modern laboratories. Our focus here is on improved insulating properties, higher temperature tolerances, longer lifetimes, easy handling and better safety features. Our test laboratories for flammability tests, HF technology and optical measurement technology safeguard our quality standards and promote innovation.

This is demonstrated by the large number of approvals and certificates coming from well-known independent testing institutes worldwide.

In the fire test laboratory, the fire-resistant properties of our products are tested by certified testers, technicians and engineers. With this capability, we are able to carry out testing to fulfil the wide-ranging measuring tasks in accordance with BS 6387 C.W.Z., IEC 60331-11/21 and DIN 4102 Part 12, as well as customer-specific specifications and special testing.

Numerous national and international certificates provide proof of the company's power to innovate.

- **IT cabling systems for data centers**
EN 50173-5, ISO/IEC 24764

Numerous national and international certificates confirm the company's ability to provide innovative solutions.

Green Technology

Our company aim is to combine innovation with sustainability. It is one of our central company goals.

Our vision is to create sustainable connections in technological harmony with the natural resources. The cycle of nature gives us the best model to emulate. It is our responsibility to learn from nature and make use of it while conserving it and treating it with care. The growing scarcity of the natural resources and the increasing burden on the environment require a rethink at all levels of society. For LEONI, sustainability is an integral part of group policy. We were the first cable manufacturer in the world to develop an integrated "green technology" programme.

While trends such as globalisation, mobility and urbanisation are crucial for market movements, our core principles are sustainability and global responsibility. This is why we have set ourselves the goal of becoming an innovative producer of cables for ecotechnology. Other points of vital interest to us are to detect the needs and requirements of tomorrow today and to supply the markets of the future with sustainable, future-proof solutions. We also view it as our responsibility to take an active role in shaping the markets for environmentally friendly energy production – such as solar thermal technology.

Green technology stands for the resource-conserving and low-emission production of sustainable quality cables made with low-pollution elements. We constantly work at optimising the efficiency with which resources are used in the manufacturing process by deploying energy-efficient machines or taking heat recovery measures. More and more locations in our global production network are environmentally certified according to the ISO 14001 standard.

In our worldwide operations as a leading European supplier of wires, optical fiber, cables and cable systems for communication and infrastructure projects, it is our responsibility to continuously optimise the sustainability and durability of our products, system solutions and services so as to reduce their impact on the environment. We have to increase the amount of environmentally compatible raw materials in our cable products as well as the recyclability of processed materials or components and in doing so create end products that are developed for the environmental standards of tomorrow today.

In conjunction with the ecological compatibility, future technologies are measured in terms of efficiency, service life, emission reduction and the conservation of natural resources. Innovative cable products and systems, holistic solutions and maximum performance in project management are the added value which we offer to our customers and business partners. These are also our cornerstones for strong connections into the future.

There are various environmental directives in the European Union (EU). Directive 2012/19/EU WEEE (Waste Electrical and Electronic Equipment) regulates the disposal of electrical and electronic equipment and components. The use of certain hazardous materials in electrical and electronic devices is defined by Directive 2011/65/EU RoHS 2 (Restriction of Hazardous Substances). Chemicals and materials in general are regulated by the law on chemical substances 1907/2006/EC REACH (Registration, Evaluation, Authorisation and Restriction of Chemicals).

This means avoiding the following substances, among others:

- Polybrominated diphenyl ether (PBDE)
- Decabromodiphenyl ether (DecaBDE)
- Perfluorooctane sulfonate (PFOS)
- Pentabromodiphenyl ether (PentaBDE)
- Octabromodiphenyl ether (OctaBDE)
- Lead (Pb)
- Mercury (Hg)
- Cadmium (Cd)
- Hexavalent chromium (Cr VI)
- Polybrominated biphenyls (PBB)

Cables and conductors and their associated connectors are only affected by Directive 2012/19/EU WEEE where they are an internal part of the listed equipment and components.

Cables and conductors have been regulated separately in 2011/65/EU RoHS 2 since 2013 (category 11 or defined as an internal component of the respective product). This does not pertain to optical fiber cable, energy cable (> 250 V) and cable with fixed installation, e.g. in buildings. The only permissible marking according to RoHS 2 is the CE marking, which is printed on the product package.

EU Directive 2012/19/EU on waste electrical and electronic equipment.

EU Directive 2011/65/EU on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

EU Regulation 1907/2006/EC (REACH) – the EU chemicals regulation.

REACH

What does REACH mean?

REACH stands for Registration, Evaluation, Authorisation and Restriction of Chemicals.

REACH represents a fundamental harmonisation and simplification of previous chemicals law and applies in all EU Member States.

REACH introduced a so-called candidate list for substances of very high concern (SVHC), which are subject to certain information obligations and should be substituted in the long term. The list of candidate substances is updated twice yearly by the European Chemicals Agency (ECHA) in Helsinki.

SPACE concept

Finding the right data cable

**S
P
A
C
E**

Security
Performance
Application
Construction
EMC

LEONI's SPACE concept is based on a pragmatic and clearly structured matrix. This decision-making aid will help you to find the right data cable for your application faster.

The concept is based on the classification of the five main selection criteria for determining the potential overall performance of a data cable:

Security · Performance · Application · Construction · EMC

It also allows the value for money to be assessed and makes room for alternative technical and economic scenarios. The demands made on the segment in question rise in step with the increase in the SPACE index.

Example of a data cable with the code S₃ P₄ A₄ C₅ E₅:

S₃ It passes the fire test according to IEC 60332-3-24 (Security Level 3)

A₄ It meets the minimum requirements of Class F_A (Performance Level 4)

P₄ It is designed for applications with more than 10 GbE (Application Level 4)

C₅ It consists of a conductor with AWG 22 (Construction Level 5) and thus has low attenuation values and an increased max. current rating

E₅ The coupling attenuation is > 80 dB (EMC Level 5)

With the VDE kitemark (an independent hallmark of quality including production monitoring), LEONI guarantees the SPACE quality features at all times.

SPACE matrix:

Security (fire behaviour)

S	1 IEC 60332-2-2	2 IEC-60332-1-2	3 IEC-60332-3-24	4 EFP Grade 1	5 EFP Grade 2
	E _{ca} /D _{ca}	E _{ca} /D _{ca}	C _{ca}	B2 _{ca}	

Performance (cable class, bandwidth)

P	1 > Class E > 250 MHz	2 > Class E _A > 500 MHz	3 > Class F > 600 MHz	4 > Class F _A > 1000 MHz	5 > Class F _A + > 1200 MHz

Application (Ethernet, TV)

A	1 > 100 MbE	2 > 1 GbE	3 up to 10 GbE	4 > 10 GbE	5 > 10 GbE TV

Construction (conductor dimension, tensile strength)

C	1 AWG 27	2 AWG 26/25	3 AWG 24	4 AWG 23	5 AWG 22

EMC (coupling attenuation)

E	1 > 40 dB	2 > 50 dB	3 > 60 dB	4 > 70 dB	5 > 80 dB

SPACE – Security

Fire behaviour

As a result of the constant increase in the installed basis and the installation density, the fire behaviour of data cables is an important safety criterion. When manufactured according to the legal regulations and installed correctly, data cables cannot cause a fire. If they do catch fire, however, they can inflame and spread the fire.

One of the aims here is to prevent the propagation of fire and the resulting damage by using flame-retardant, halogen-free cable designs.

MegaLine® data cables have improved fire protection characteristics:

- Extremely low smoke development according to IEC 61034
→ Facilitates rescue and removal activities
- Low toxicity (dioxins are not produced)
→ Reduces the risk of poisoning
- Halogen free according to IEC 60754-2
→ No consequential damage to material assets as a result of corrosion
- Low fire load values
→ Limits the exacerbating effects on the source of the fire
- High oxygen index (OI up to 45)
→ Reduces the flammability

Security (fire behaviour)				
S	1 IEC 60332-2-2	2 IEC-60332-1-2	3 IEC-60332-3-24	4 EFP Grade 1
The five security levels with regard to fire propagation/flame retardancy:				
S₁ IEC 60332-2-2				
<p>Testing of the vertical propagation in a core or single cable. Test method: incandescent flame.</p>				
S₂ IEC 60332-1-2				
<p>Testing of the vertical propagation in a core or single cable. Test method: 1 KW flame. A flame is applied to the lower end of a vertical sample of the cable about 60 cm in length for about 60 seconds using a type of Bunsen burner. After removal of the burner, the flames must go out by themselves. The parts of the cable damaged by the flames must not reach its upper end (distance: 50 mm).</p>				
S₃ IEC 60332-3-24				
<p>Testing of the flame propagation in an arrangement of several cables, a so-called cable bundle, is carried out according to IEC 60332-3-24. In this cable bundle test, a flame is applied to the lower part of the test samples on a vertical ladder with a length of 360 cm using a high-performance burner. During</p>				
S₄ EFP (Enhanced Fire Performance) Grade 1				
<p>In this cable bundle test, a flame is applied to the lower part of the test samples on a vertical ladder with a length of 360 cm using a high-performance burner. During and after intensive application of the flame for a test period of 20 minutes, only approx. 1 m of the section to which the flame is applied may burn. Immediately after removal of the flame, the self-extinguishing process must start. Only specially designed data cables can stand up to this exacting fire test.</p>				
S₅ EFP (Enhanced Fire Performance) Grade 2				
<p>This stricter security level is application-specific.</p>				
Security levels S₃, S₄ and S₅ are used in particular where high and very high security measures are required for the protection of persons or material assets. For example in hospitals, schools, hotels, airports, railway stations, departments stores, power and electricity plants, data centers, banks, insurance companies and alarm systems.				

and after intensive application of the flame for a test period of 20 minutes, the cables must not burn higher than 250 cm.

S₄ EFP (Enhanced Fire Performance) Grade 1

In this cable bundle test, a flame is applied to the lower part of the test samples on a vertical ladder with a length of 360 cm using a high-performance burner. During and after intensive application of the flame for a test period of 20 minutes, only approx. 1 m of the section to which the flame is applied may burn. Immediately after removal of the flame, the self-extinguishing process must start. Only specially designed data cables can stand up to this exacting fire test.

S₅ EFP (Enhanced Fire Performance) Grade 2

This stricter security level is application-specific.

Security levels S₃, S₄ and S₅ are used in particular where high and very high security measures are required for the protection of persons or material assets. For example in hospitals, schools, hotels, airports, railway stations, departments stores, power and electricity plants, data centers, banks, insurance companies and alarm systems.

SPACE – Performance

Cable class / bandwidth

In cabling systems, a service life of 10 to 15 years is expected. This requires far-sighted planning of the required performance of cabling systems and their components.

Because of their hard-fought compromises and in view of fast-increasing transmission rates, international standards often fall short. Since the development of 10 Gigabit Ethernet, none of the cabling classes below Class F can be said to meet the demands of the future.

MegaLine® data cables have excellent transmission performance. They offer high security reserves and are always one step ahead of the standard.

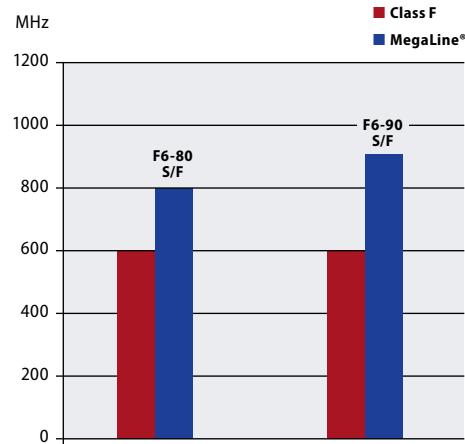

MegaLine® – an investment with a future!

Performance (cable class, bandwidth)

P	1 > Class E > 250 MHz	2 > Class E _A > 500 MHz	3 > Class F > 600 MHz	4 > Class F _A > 1000 MHz	5 > Class F _{A+} > 1200 MHz
---	-----------------------------	--	-----------------------------	---	--

The five classes for performance (cabling class, bandwidth) have very high reserves with regard to the standard involved.

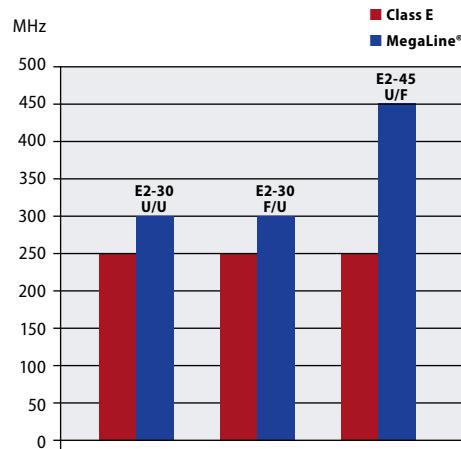

P₃ better than Class F (600 MHz)

Example: **MegaLine® F6-90 S/F**

Better than Category 7 according to EN 50288 and IEC 61156
excellent NEXT, excellent shielding characteristics
(pairs and overall shielding), low skew

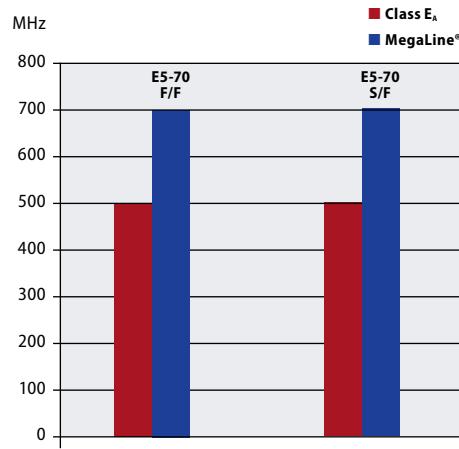

P₁ better than Class E (250 MHz)

Example: **MegaLine® E2-45 U/F**

Better than Category 6 according to EN 50288 and IEC 61156, very good NEXT, low skew

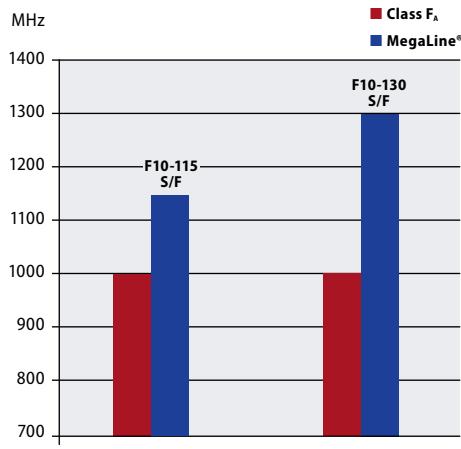

P₂ better than Class E_A (500 MHz)

Example: **MegaLine® E5-70 S/F**

Better than Category 6_A according to EN 50288 and IEC 61156, very good NEXT, very good shielding characteristics (pairs and overall shielding), low skew

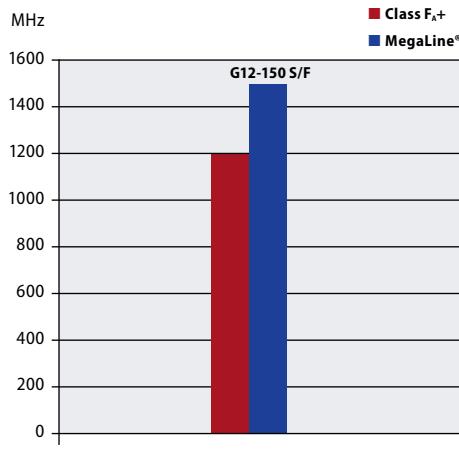

P₄ better than Class F_A (1000 MHz)

Example: **MegaLine® G12-150 S/F**

Better than Category 7_A according to EN 50288 and IEC 61156, excellent NEXT, low attenuation, excellent shielding characteristics (pairs and overall shielding), low skew

P₅ better than Class F_{A+} (1200 MHz)

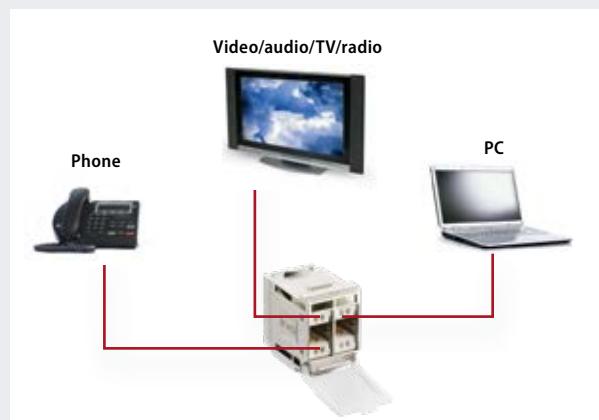

Example: **MegaLine® G12-150 S/F**

Better than Category 7_A according to EN 50288 and IEC 61156, excellent NEXT, low attenuation, excellent shielding characteristics (pairs and overall shielding), low skew

SPACE – Application

Ethernet / TV

The large security reserves mean that multimedia applications such as TV and transmission protocols with high bandwidth requirements such as 10 Gigabit Ethernet and 8 Gigabit Fiber Channel can be transmitted over 100 m. Experts have calculated that, as far as we know today, MegaLine® Category 7_A data cables allow transmission rates of as much as 100 Gbit/s.

The use of low-loss broadband S/FTP cables with individual or overall shielding in conjunction with multimedia cabling systems allows so-called cable or service sharing.

Cables and connectors form a perfect symbiosis:

4 pairs, 4 connecting clips – each with GHz performance.

This allows parallel, simultaneous use of different applications via one cable and one connector: data, voice and images.

Multimedia systems do not need to cost more than conventional systems, in which an individual cable and an individual connector is usually required for each service. This allows savings of up to 50 % of the necessary cables, connectors, wall outlets and patch panels.

Multiple use reduces the system costs by 15 to 30 % (depending on the services used). The reduction in the number of cables and wall outlets actually required usually also allows reductions in the costs for cable ducts, switching cabinets, etc.

But MegaLine® data cables are capable of more

The supply of current (up to 350/600 mA) and voltage (up to 48 V) can be provided via PoE/PoE+ (according to IEEE 802.3a/at). The current is fed in centrally via the floor distributor or switch. Devices such as IP telephones, web cameras, wireless LAN access points, etc. are supplied via the telecommunications outlet. The voltage is tapped via a phantom circuit or two unassigned pairs.

Application (Ethernet, TV)

A	1 >100 MbE	2 >1 GbE	3 up to 10 GbE	4 >10 GbE	5 >10 GbE TV
----------	---------------	-------------	-------------------	--------------	--------------------

The SPACE concept provides five different application levels.

A₁ > 100 Mbit/s (Fast Ethernet) IEEE 802.3 u

A₂ > 1000 Mbit/s (Gigabit Ethernet) IEEE 802.3 ab

A₃ ≤ 10,000 Mbit/s (10 Gigabit Ethernet) IEEE 802.3 an

A₄ > 10,000 Mbit/s (10 Gigabit Ethernet) IEEE 802.3 an

A₅ > 10,000 Mbit/s (10 Gigabit Ethernet) and TV
IEEE 802.3 an and multimedia

SPACE – Construction

Conductor dimension

High-precision conductor and core geometries, optimally matched lay lengths in the pairs and the use of very high-quality insulation and sheath materials are the characteristic features of our range of cables.

Our cables are produced on ultra-modern equipment which corresponds with the "state of the art" as a result of procedural innovations. The use of physical foaming in the manufacture of high-frequency cores allows excellent, uniform electrical and geometrical characteristics to be achieved. Double skin layers ensure excellent mechanical stability while patented stranding techniques demonstrate technical leadership.

The designs have low outer diameters, thus allowing high packing densities and small bending radii. The weight reductions and the robust cable construction offer advantages for assembly and installation, even under difficult conditions.

Construction (conductor dimension, tensile strength)

C	1 AWG 27	2 AWG 26/25	3 AWG 24	4 AWG 23	5 AWG 22
---	----------	-------------	----------	----------	----------

The current-handling capacity for a maximum ambient temperature of 60 °C and the maximum installation lengths in the transmission channel can be derived from this on request.

The five different conductor classes describe the permitted tensile stress during installation and the conductor resistance.

Note ➤ The copper sales factor is a purely commercial calculation factor that is used to calculate the total price of a cable. Although usually expressed in the trade in kg/km, the copper sales factor does not indicate the quantity or weight of the actual copper contained in the cable.

It is a purely arithmetic calculation factor that does not give any direct indication of the amount of copper used in the cable.

C₁ AWG 27 (7x0,14 mm²/0.112 mm²)

Tensile stress: max. 40/20 N (4 p/2 p)

Conductor resistance: max. 170 Ω/km

C₂ AWG 26 or AWG 25

→ C₂₁ AWG 26 (7x0.16 mm²/0.14 mm²)

Tensile stress: max. 60/30 N (4 p/2 p)

Conductor resistance: max. 145 Ω/km

→ C₂₂ AWG 25 (7x0.18 mm²/0.175 mm²)

Tensile stress: max. 70/35 N (4 p/2 p)

Conductor resistance: max. 120 Ω/km

C₃ AWG 24 (0.51 mm²/0.205 mm²)

Tensile stress: max. 90/45 N (4 p/2 p)

Conductor resistance: max. 95 Ω/km

C₄ AWG 23 (0.57 mm²/0.258 mm²)

Tensile stress: max. 110/55 N (4 p/2 p)

Conductor resistance: max. 75 Ω/km

C₅ AWG 22 (0.64 mm²/0.325 mm²)

Tensile stress: max. 130/65 N (4 p/2 p)

Conductor resistance: max. 57 Ω/km

SPACE – EMC

Coupling attenuation

Electromagnetic compatibility (EMC)

This refers to the ability of devices, systems and plants to function satisfactorily in an electromagnetic environment without negative effects on other devices, systems or plants. EMC legislation prescribes the electromagnetic compatibility of devices, systems and plants. The limits for the emission of interference and the immunity to interference which must be observed are regulated by EN 55022 (Class B) and EN 50082-1/2 / EN 55024.

A data cable must resist electromagnetic influences coming from the outside to the inside (immunity to interference) and from the inside to the outside (emission of interference). The susceptibility of data cable systems to interference increases in step with the transmission frequency and the data rates (currently 10 Gigabit Ethernet).

Electromagnetic Compatibility			
Construction	U/UTP	F/UTP	S/FTP
Symmetrical characteristics	+++	++	++
Shield characteristics	low	+	+++
Installation environment influence	high	moderate	low

The main danger is increasingly a result of the alien crosstalk between adjacent data cables. Depending on their construction, data cables have different capabilities with regard to the prevention or reduction of interference.

- Unshielded data cables have very good symmetry characteristics but are not shielded against internal, external or adjacent sources of interference. They are endangered to a high degree by the environment in which they are installed.
- Data cables with individual or overall shielding have very good symmetry characteristics and good or even very good shield characteristics. The EMC is very good or even excellent. Interference coming from the installation environment (adjacent data cables) can be ruled out completely.

MegaLine® data cables with dual shielding achieve values of > 80 dB to 1000 MHz, thereby suppressing incoming or outgoing potential interference by a factor of >10,000. Cables with individual and overall shielding (S/FTP) have excellent EMC, making them an obvious choice for the fail-safe transmission of high data rates such as those offered by 10 Gigabit Ethernet.

EMC (coupling attenuation)

E	1 >40 dB	2 >50 dB	3 >60 dB	4 >70 dB	5 >80 dB
---	-------------	-------------	-------------	-------------	-------------

With the MegaLine® SPACE concept, LEONI provides five different EMC levels to choose from.

The evaluation criterion is the coupling attenuation (interference power suppression). As the sum of the shielding attenuation and the symmetry attenuation, the coupling attenuation is the "be-all and end-all" for the assessment and comparison of the overall EMC behaviour of different types of data cable.

E₁ coupling attenuation > 40 dB

Interference suppression exceeding a factor of 100

E₂ coupling attenuation > 50 dB

Interference suppression exceeding a factor of 300

E₃ coupling attenuation > 60 dB

Interference suppression exceeding a factor of 1,000

E₄ coupling attenuation > 70 dB

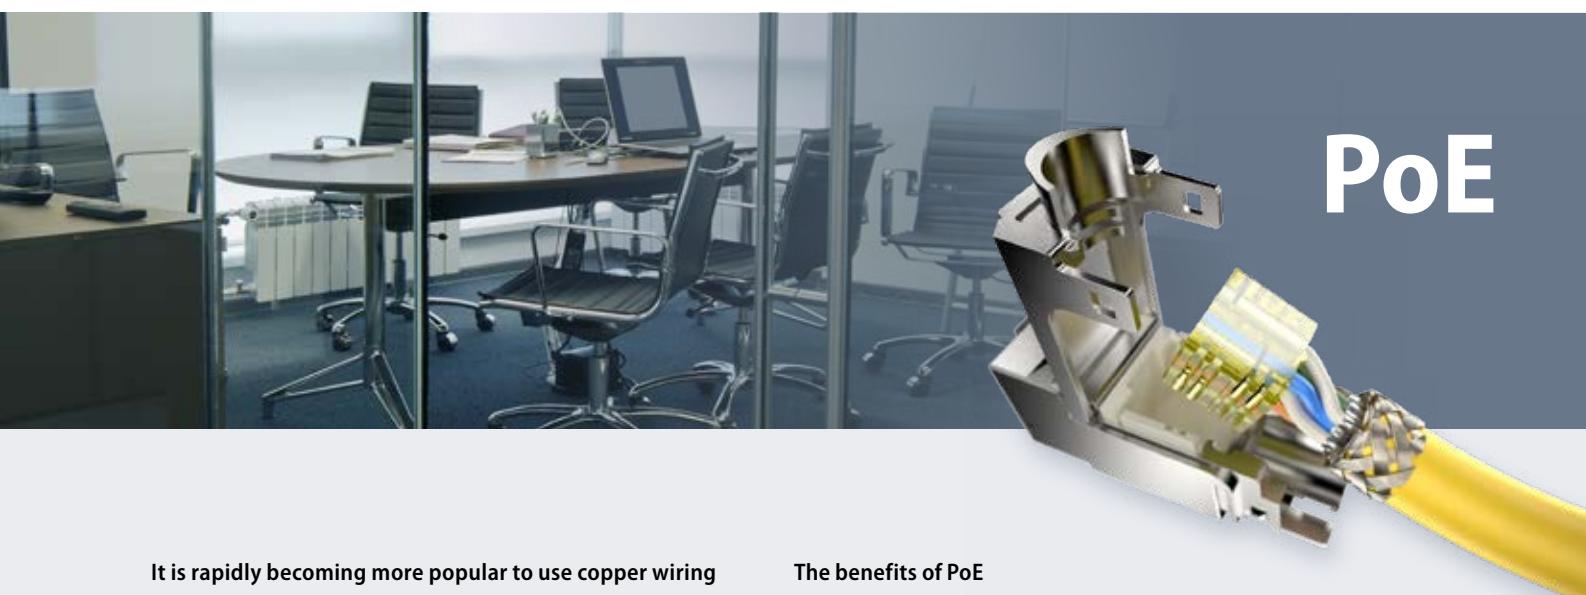

Interference suppression exceeding a factor of 3,000

E₅ coupling attenuation > 80 dB

Interference suppression exceeding a factor of 10,000

PoE (Power over Ethernet) on the advance

Category 7A data cables tolerate higher power loads

It is rapidly becoming more popular to use copper wiring for the dual purpose of supplying IT devices with data and energy simultaneously. More and more users are beginning to turn to the "Power over Ethernet" (PoE) technology that has been designed to do this.

The benefits of PoE

It is no longer necessary to use a 230 V power supply. It is now possible to supply end-user devices with up to 100 W (PoE++) rather than the previous 15W (PoE) or 30W (PoE+), supplied via 4-pair data cables.

Find out more

LEONI provides information on future developments and applications, looking into the question of which data cables and connectors are suitable for transmitting electric current.

Technical information

The standard IEEE 802.3af (PoE) allows energy supply to Ethernet devices with an output of 15 W via data cabling. Here the reliable amperage is 175 mA per conductor (350 mA per pair).

In the case of IEEE 802.3at (PoE+) the output is 30 W. The reliable amperage in this case is 300 mA per conductor (600 mA per pair).

A current-carrying circuit is required (one pair) for supply and return wiring.

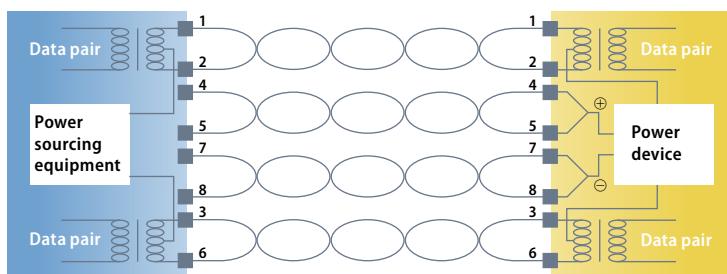

In the case of Cisco's proprietary UPoE technology (Universal Power over Ethernet), two pairs are used for the supply and return wiring (maintaining the current load for each conductor). This allows the output to be doubled to 60 W.

The IEEE 802.3bt (PoE++) standard is also referred to as four-pair Power over Ethernet (4PPoE). So far, only two of the four wire pairs of a data cable have been used in PoE, so all 4 pairs are used for power transmission of up to 100 W, with a permissible current of 500 mA per conductor.

	PoE	PoE+	PoE++
Standard	IEEE 802.3af-2003	IEEE802.3at-2009	IEEE802.3bt-2018
Useful power for the PD	13 W	25 W	60 – 100 W
PD voltage	37 – 57 V	42.5 – 57 V	44 – 57 V
Max. power consumption per pair	350 mA	600 mA	1000 mA

Benefits of PoE

The PoE-capable switch used (Power Sourcing Equipment – PSE) offers enormous benefits in conjunction with PoE-capable end devices (Powered Devices – PD):

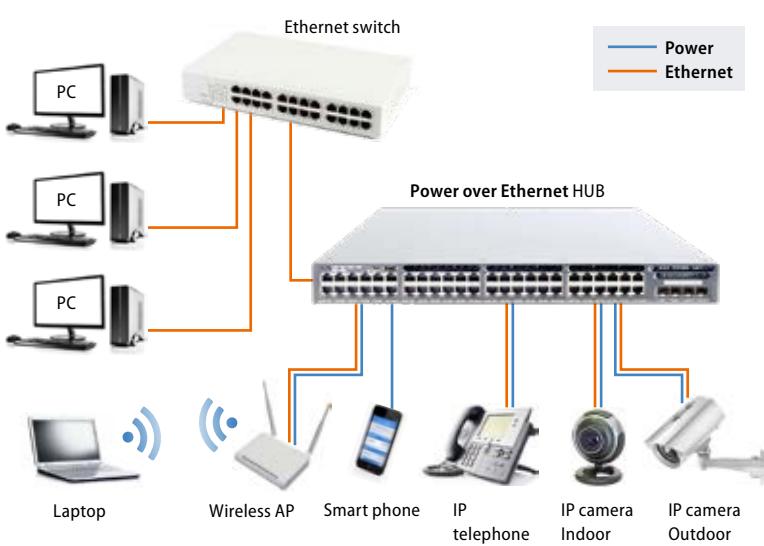

Core block diagram for PoE (from IEC 62652)

- **Saves 230 V energy supply**
(cable and socket)
- **Internationally secured compatibility**
(based on international standardisation)
- **Comprehensive management and monitoring options**
- **Reduced energy costs**
due to needs-oriented routing of energy and deactivation of unused ports
- **Fail-safe**
due to central, uninterrupted power supply (UPS).

These applications are supported

There are now numerous end devices that support and use PoE or PoE+. A number of these are shown here, but this selection by no means claims to be exhaustive. In addition, new applications are to be developed which require a power supply of up to 100 W.

Examples of applications for PoE

PoE (15 W)

- IP telephones
- IP cameras
- Wireless LAN access points
- Bluetooth access points

PoE (30 W)

- Devices for the high-speed WLAN standard IEEE 802.11n
- Outdoor IP camera with heat, pan, tilt and zoom function
- Access control systems with controller, reading devices and lock system
- Video IP telephone

PoE (up to 100 W)

- Nursing call system in the healthcare sector
- Credit card reading devices and printers, e.g. in retail
- Laptops, thin-client computers
- Lighting (LED), building management
- Industrial applications, e.g. step motors
- Bluetooth access points

What to note when wiring

Data cabling was not originally designed for energy transmission at all. Nonetheless, dual use as desired is possible if the defined framework conditions are taken into account and suitable components selected.

The following points must be taken into account, however:

» Overheating of the data cable

» Contact burn in connectors

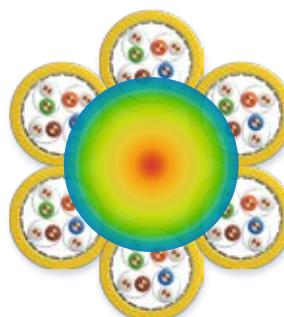

» Overheating of the data cable

The increased power levels involved with the use of PoE, combined with cable accumulation in the installation duct and poor heat dissipation, can lead to perceptible increases in temperature in the data cables, potentially rising to dangerous levels in extreme cases.

Cable warming depends on the following factors:

- Current load (depending on the PoE standard used)
- Cable design (in particular conductor cross-section)
- Number of cable bundles in the installation channel
- Installation environment (heat release)
- Ambient temperature

The correct cable design makes a crucial contribution in minimising cable warming.

*Application example
for PoE*

The rule of thumb is:

the higher the category, the less the warming!

The higher the category, the larger the conductor cross-section, the less the direct current resistance and therefore the less heat loss, too.

In the example shown from ISO/IEC TR 29125, Category 7_A cables exhibit 36 per cent lower heating as compared to Category 5 data cables.

Cable warming based on cable category (from ISO/IEC TR 29125)

Size of cable cluster (no. of cables)	Temperature increase in C°				
	CAT 5	CAT 6	CAT 6 _A	CAT 7	CAT 7 _A
1	0.8	0.6	0.6	0.6	0.6
7	1.4	1.1	1.0	1.0	0.9
19	2.6	2.1	1.8	1.8	1.6
37	4.7	3.7	3.2	3.2	2.9
61	6.9	5.5	4.8	4.8	4.4
91	9.7	7.7	6.7	6.7	6.2
127	13.1	10.4	9.0	9.0	8.3
169	16.9	13.5	11.7	11.7	10.8

-36 %

» Overheating of the data cable

Another generally neglected effect is the increase in attenuation – caused by the rise in temperature and the reduction in range which this derives from. This can lead to incorrect transmission and in extreme cases result in system failure.

Here, shielded data cables offer clear benefits over unshielded data cables due to the lower temperature coefficient.

Example 1 – unshielded

Class D(a) at 60 °C with Cat.5 cable UTP

$$H_{60^\circ\text{C}} = (109 \text{ m} - 10 \times 1.5 \text{ m}) - (0.4 / 100 \times 20 \times 94 \text{ m}) - (0.6 / 100 \times 20 \times 94 \text{ m}) = 75 \text{ m}$$

Example 2 – shielded

Class D(a) at 60 °C with Cat. 5 cable STP

$$H_{60^\circ\text{C}} = (109 \text{ m} - 10 \times 1.5 \text{ m}) - (0.2 / 100 \times 40 \times 94) = 86 \text{ m (+15 %)}$$

Equation for horizontal transmission links

Model	Model equation		
	Class D	Class E and E _A	Class F and F _A
a) Through connection TO	$H = 109 - F \times X$	$H = 107 - 3 - F \times X$	$H = 107 - 2 - F \times X$
b) Marshalling TO	$H = 107 - F \times X$	$H = 106 - 3 - F \times X$	$H = 106 - 2 - F \times X$
c) Through-connection SP – TO	$H = 107 - F \times X - C \times Y$	$H = 106 - 3 - F \times X - C \times Y$	$H = 106 - 2 - F \times X - C \times Y$
d) Marshalling SP – TO	$H = 105 - F \times X - C \times Y$	$H = 105 - 3 - F \times X - C \times Y$	$H = 105 - 2 - F \times X - C \times Y$

H = max. length of tertiary cable (m)

F = total length of marshalling cords, marshalling pairs, device connection and device connector cords (m)

C = length of collection point cable (m)

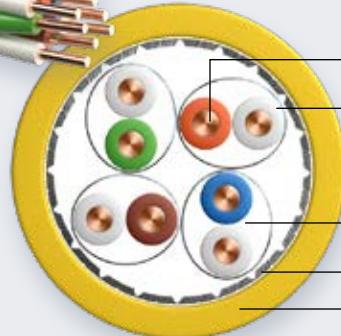

X = relation between the insertion loss of the flexible cable (dB/m) and the insertion loss of the tertiary cable (dB/m)

Y = relation between the insertion loss of the collection point cable (dB/m) and the insertion loss of the tertiary cable (dB/m)

At temperatures above +20 °C H should be reduced in shielded cables by 0.2 % per 1 °C and in unshielded cables by 0.4 % per °C (+20 °C to +40 °C) and by 0.6 % per 1 °C (> +40 °C to +60 °C).

Our recommendation for the right data cable

- Shielded cable with the highest possible category: e.g. Category 7_A
- Large conduction cross-section (AWG 22)
- If required – special designs with permitted operating temperature > 60 °C

Conductor	Bare copper wire, AWG 22/1
Insulation twisting element	Cellular PE, core Ø: nominal value 1.6 mm Pair
Individual shielding	Aluminium bonded polyester foil, metal on the outside (PiMF)
Twisting	4 pairs
Overall shielding	Tinned copper braid
Outer sheath	Halogen-free, flame-retardant compound

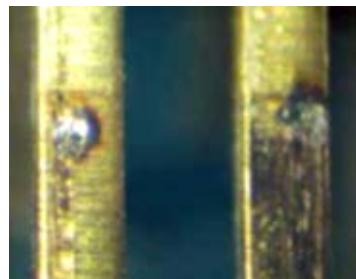

S/FTP data cable with cross-section AWG22/1
e.g. MegaLine® F10-130 S/F

» Contact burn in connectors

In connection technology, removing a plug under load can cause damage – so-called contact burn – due to the occurrence of an electric arc or sparking. An irreversible impairment of the contacts is caused, possibly even failure.

A potential remedy here is to use the appropriate port power management – i.e. first switch off the power supply, then remove the plug.

However, intentional or unintentional removal of the plug under load cannot be entirely avoided.

Contact burns in connection technology – shown here: a RJ45 socket (from IEC 62652)

Our recommendation for your choice of connection technology:
use staggered contact and insulation zones – over and above the relevant connector standards.

Certified safety

MegaLine® Connect100 and MegaLine® Connect45

For this reason, LEONI had the product families MegaLine® Connect100 and MegaLine® Connect45 independently tested according to IEC 60512-99-001 and IEC 60512-9-3.

For this purpose, the socket/plug combinations were exposed to frequent insertion cycles under load. The permitted deviation of transition resistances (max. 20 MΩ) is easily maintained – **which means certified safety!**

MegaLine® Connect100 with staggered contact and insulation zones

Summary and outlook

Thanks to Power Ethernet, numerous IT devices are now able to do without a 230 V power supply. This technology enables buildings and offices to be planned and operated more intelligently and with greater energy efficiency.

Not least due to the increase in power levels to be expected, LEONI recommends the use of shielded data cables of Category 7_A with conductor dimension AWG 22 and connection technology with staggered contact and insulation zones.

Our contribution to green IT in buildings.

Fire protection cable in accordance with the EU Construction Products Regulation

Maximum safety with B2_{ca} cables by LEONI

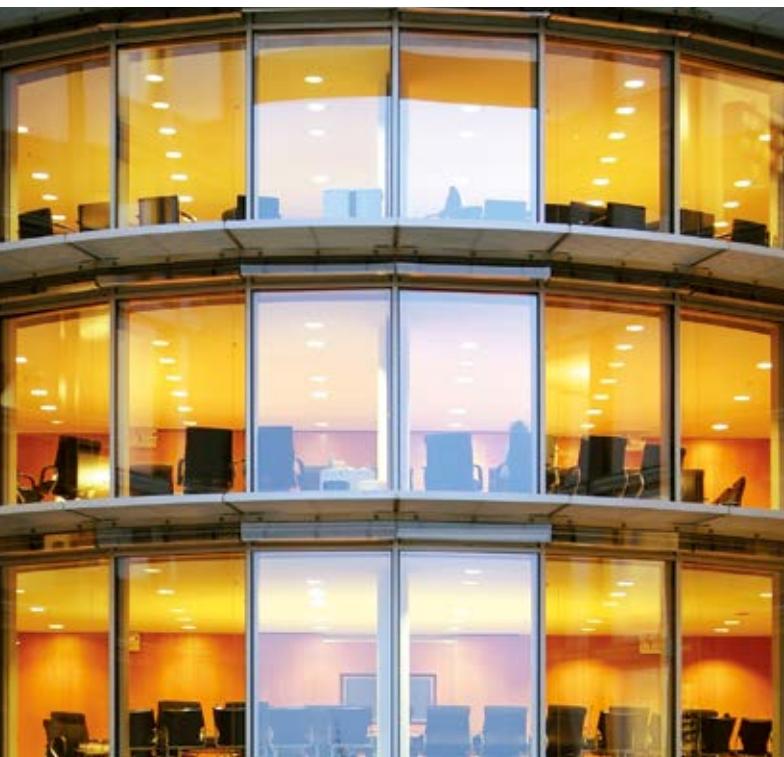

**Fire provides heat, light and
a comforting sense of security.**

**But it can also be potentially
fatal and result in horrific
devastation.**

Safety in the event of a fire

Where fires occur

One-third of all fires occur in buildings. Numerous deaths due to gas and smoke poisoning are the consequence. The average length of time from the development of a fire until the rollover (pyrolysis gases) has decreased drastically in recent years.

- 1950: 15 minutes
- 1985: 5 minutes
- 2010: 3 minutes

As a result, the available time for a possible escape from the building has also been drastically reduced.

This situation has prompted construction material manufacturers to produce increasingly better and more flame-retardant products.

Fire safety of cable systems

Save lives, impede fires, minimise consequential damage

Saving lives, impeding fires and minimising consequential damages are the priorities when fires break out. Electrical and optical cables must also have their part to play, especially given the fact that cable density in modern buildings is constantly increasing. How can cables contribute to a positive behaviour in the event of a fire and/or what dangers are posed by obsolete, insufficiently fire-resistant cables? These questions can be assigned to three categories:

1. The cable must not make a significant contribution to fire propagation. In particular, it must not propagate the fire from one storey to the next. It must also be ensured that there are no droplets and particles that contribute to fire propagation.

2. Smoke and toxic gases must be avoided, because they make safe building evacuation and impede the efforts of rescue or make them impossible. Most cases of death in the event of a fire can be traced to smoke and toxic gases, not to the fire itself. Therefore, this aspect should actually be given top priority.

3. The rebuilding phase comes after the fire. This is complicated when large quantities of corrosive combustion gases have developed from the fire, because these gases build corrosive acids (e.g. hydrochloric acid) when combined with extinguishing water. Such acids are finely dispersed well beyond the location of the fire throughout the entire building, causing damage to all metallic objects. Potential examples include: structural steel, metal constructions, electrical installations, electronics and IT systems.

Save lives

Impede fires

Minimise consequential damage

These three requirements have been incorporated in the fire classification of the new EU Construction Products Regulation.

CE marking and declaration of performance

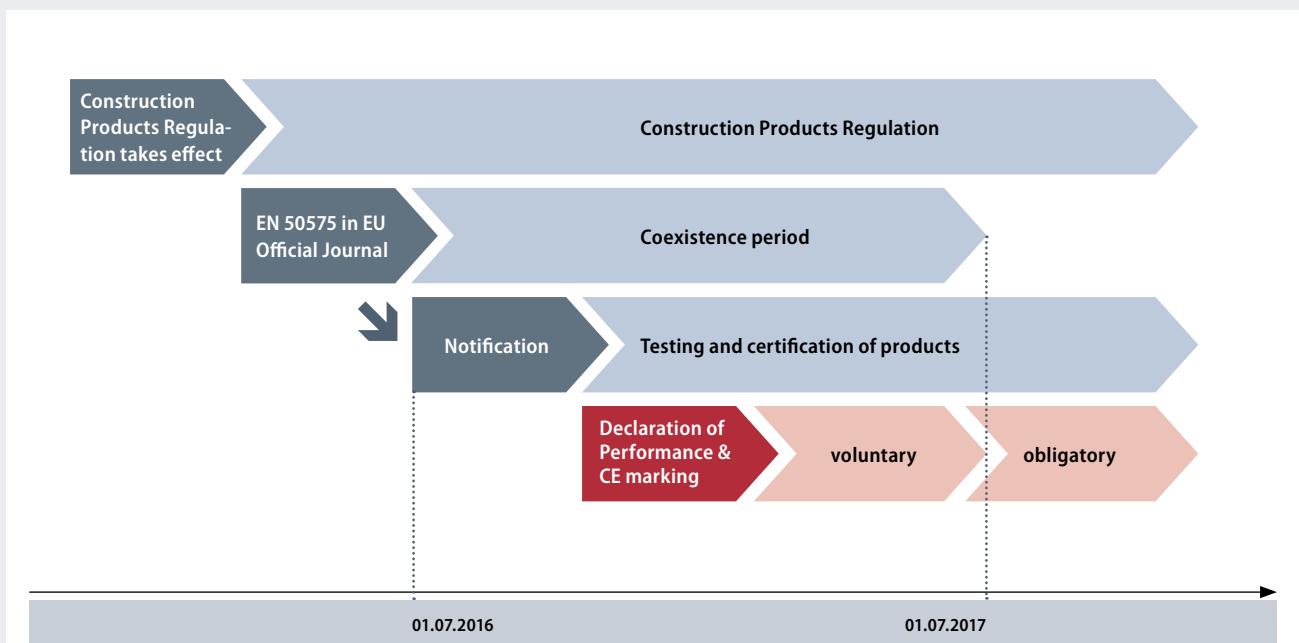

EU Construction Products Regulation

Power, control and communication cables that are permanently installed in structures fall under EU Regulation 305/2011 (Construction Products Regulation). Excluded from this: lift cables, cables inside machinery and cables for use in industrial plants.

The EU Construction Products Regulation defines the conditions for the CE marking and requires a declaration of performance of the manufacturer on the following essential product features derived from the protective goals: fire safety (flame propagation, heat development, smoke production, acid formation, flaming droplets) and the absence of harmful substances. In addition, the Construction Products Regulation specifies how conformity with the requirements is permanently ensured.

With the publication of the harmonised standard EN 50575:2014 in the Official Journal of the European Union, the requirement for implementation of the Construction Products Regulation has now been established for all market participants. This standard states the following: 'Power, control and communication cables, cables for general applications in construction works terms of fire behaviour requirements'. Effective 01 July 2016, a cable manufacturer must provide a CE marking on products that have been tested and certified by a notified body and issue a corresponding Declaration of Performance.

After expiry of the coexistence period, which is one year, the CE marking and creation of a Declaration of Performance are mandatory.

The Declaration of Performance certifies compliance with the fire classes defined below and is thus a requirement for use of the cable for the applications defined by the EU Member States.

Note: Cables with circuit and system integrity (resistance to fire) are handled separately in a different standard to be harmonised in the future. They are therefore not subject to current implementation of the Construction Products Regulation. Application of the Construction Products Regulation for these cables is not expected prior to 2017.

Fire classifications and proof of conformity

EU Construction Products Regulation

The classes of fire response are shown in the following table, with a classification of requirements ranging from A_{ca} (non-flammable) and B1_{ca} or B2_{ca} (very high) to C_{ca} (high), D_{ca} (moderate),

E_{ca} (low) and F_{ca} (no requirement). This classification from A to F applies in general to all construction products. The index 'ca' stands for cable.

Classes of fire behaviour of electrical cabinets according to DIN EN 13501-6

Classification								
Test method	Parameter	A _{ca}	B1 _{ca}	B2 _{ca}	C _{ca}	D _{ca}	E _{ca}	F _{ca}
EN ISO 1716	PCS (MJ/kg)	≤ 2.0	–	–	–	–	–	–
EN 60332-1	H (mm)	–	≤ 425	≤ 425	≤ 425	≤ 425	≤ 425	–
EN 50399	Flame source (kW)	–	30	20.5	20.5	20.5	–	–
EN 50399	FS (m)	–	≤ 1.75	≤ 1.5	≤ 2.0	–	–	–
EN 50399	THR (MJ)	–	≤ 10	≤ 15	≤ 30	≤ 70	–	–
EN 50399	max. HRR (kW)	–	≤ 20	≤ 30	≤ 60	≤ 400	–	–
EN 50399	FIGRA (W/s)	–	≤ 120	≤ 150	≤ 300	≤ 1300	–	–

Additional classification								
EN 50399/EN 61034	Smoke development	–	s1, s1a, s1b, s2, s3	no	no			
EN 60754-2	Corrosiveness	–	a1, a2, a3	a1, a2, a3	a1, a2, a3	a1, a2, a3	no	no
EN 50399	Burning droplets	–	d0, d1, d2	d0, d1, d2	d0, d1, d2	d0, d1, d2	no	no

H: Flame Spread, vertical flame propagation (mm)
FS: Flame Spread, vertical flame propagation (m)
PCS: Pouvoir Calorifique Supérieur, gross calorific value

THR: Total Heat Release (MJ)
HRR: Heat Release Rate, maximum heat release rate (kW)
FIGRA: Fire Growth Rate, index of heat release rate (W/s)

TSP: Total Smoke Production, (m²)
SPR: Smoke Production Rate, max. (m²/s)

Explanation

s1 = TSP ≤ 50 m² and max. SPR ≤ 0.25 m²/s

s1a = s1 and transmission value acc. to EN 61034-2 ≥ 80 %

s1b = s1 and transmission value acc. to EN 61034-2 ≥ 60 % < 80 %

s2 = TSP ≤ 400 m² and max. SPR ≤ 1.5 m²/s

s3 = neither s1 nor s2

d0 = no flaming droplets/particles

d1 = no flaming droplets/particles for longer than 10 s

d2 = neither d0 nor d1

EN 60754-2:

a1 = electrical conductivity < 2.5 µS/mm and pH value > 4.3

a2 = electrical conductivity < 10 µS/mm and pH value > 4.3

a3 = neither a1 nor a2. No data = no performance determined.

Conformity monitoring is also set out in detail in the Construction Products Regulation and defined by EN 50575.

The following is a simplified summary of the obligations for the notified approval body and the manufacturer:

Class of fire behaviour	A _{ca}	B1 _{ca}	B2 _{ca}	C _{ca}	D _{ca}	E _{ca}	F _{ca}
System of conformity monitoring			1+			3	4
Obligations of the notified body				Sample testing and recurring factory auditing with random sampling		Sample testing	–
Obligations of the manufacturer				Production monitoring		Production monitoring	–

Overview of fire testing

These are the goals when using safety cables.

- 1. >> Save lives**
- 2. >> Impede fires**
- 3. >> Minimise consequential damage**

The fire test according to EN 50399 covers Goals 1 and 2 because reduced fire propagation, smoke and flaming droplets make an essential contribution to fire safety.

The cables (number used dependent on cable diameter) are mounted onto a ladder in a vertical tube furnace and a flame is applied to them for 20 minutes using an air gas burner (20 kW / 30 kW). The flue gases are collected with a defined air current (nominal value 8000 l/min) and conducted into an exhaust air duct in which the speed of the air current, the oxygen and CO₂ content, the light absorption and the temperature are measured. This allows the above values to be determined. As many parameters differ from those occurring in the test according to IEC 60332-3, the results cannot be transferred. In particular, the installation of the cable with the distance and elevated air current make the fire scenario more demanding than in IEC 60332-3.

The test according to EN 50399 clearly demonstrates the difference between a cable with high fire safety (below) and a cable of lower quality. The fire propagation, smoke and flaming droplets can be clearly seen (above).

Fire classes according to the Construction Products Regulation

Cables for energy, control and communication. The fire performance of power, control and communication cables for fixed installation in buildings is analysed and classified according to EU Regulation 305/2011. For this purpose, the heat release and the flame spread are measured via the above test method according to EN 50399 and evaluated in order to classify the cables according to the relevant fire class. The cables can also achieve additional classification according to the Construction Products Regulation if smoke production, flaming droplets and acidity are determined.

The test according to EN 50399 allows flame propagation, heat release, smoke production and flaming droplets/particules to be determined.

The majority of the parameters required for cables in the Construction Products Regulation are determined by means of the test according to EN 50399.

A strongly burning cable with increased smoke and flaming droplets/particles.

A cable that meets the requirements of B2_as1 d1 a1.

The 4 m high fire cabin according to EN 50399, in which the cables are installed vertically on a ladder.

Smoke production in the test according to EN 61034: this fire test was carried out with a heavily smoking cable.

Smoke production in the test according to EN 61034. This fire test was carried out on a cable that meets the requirements.

Flame test on individual cable according to EN 60332-1, the basic requirement.

Smoke production is subject to especially strict evaluation in the test according to EN 61034.

Reduced smoke generation is a key factor in meeting Objective 1 when evacuating buildings with a high density of people and difficult evacuation conditions. Evaluation of corrosiveness and acidity (EN 50267) is important not just in order to avoid the damage resulting from corrosion (Objective 3), but also to avoid their toxic effect on people attempting to escape in the event of a fire (Objective 2).

The flame test on a single cable according to EN 60332-1 provides the basis for less demanding requirements.

These objectives are met by the Construction Products Regulation in that the safety levels defined by the fire tests are applied in relation to the building in question. The German Electrical and Electronic Manufacturers' Association (ZVEI) has drafted a proposal for the effective application of these safety levels. This is presented below and on the following pages.

Corrosiveness is assessed in accordance with EN 50267 by means of a chemical analysis of the combustion gases.

Depending on the safety requirement in buildings, the ZVEI recommends the use of fire-resistant cables. The use of class B2_{ca} cables is effective in buildings with very high safety requirements, while the use of class C_{ca} cables makes sense in buildings with high safety requirements. A recommendation for the building classification according to the German Model Building Code (MBO) was also drafted on this basis. Finally, these recommendations are also being incorporated in new versions of installation requirements for energy and communications cabling (DIN EN 50174 Part 1-3, DIN VDE 0100-520 and DIN VDE 0100-420).

Cable type with Euroclass B2_{ca} s1a d1 a1

Overview of the areas of application

Recommendation of the ZVEI for the fire classes to be applied for cable under the Construction Products Regulation

Fire classes				Safety requirements in buildings
Flame propagation / Heat development	Smoke development / density	Flaming droplets	Acid formation / corrosiveness	
A _{ca}	–	–	–	Very high
B1 _{ca}	–	–	–	Very high
B2 _{ca}	s1	d1	a1	Very high
C _{ca}	s1	d1	a1	High
D _{ca}	s2	d2	a1	Moderate
E _{ca}	–	–	–	Low
F _{ca}	–	–	–	None

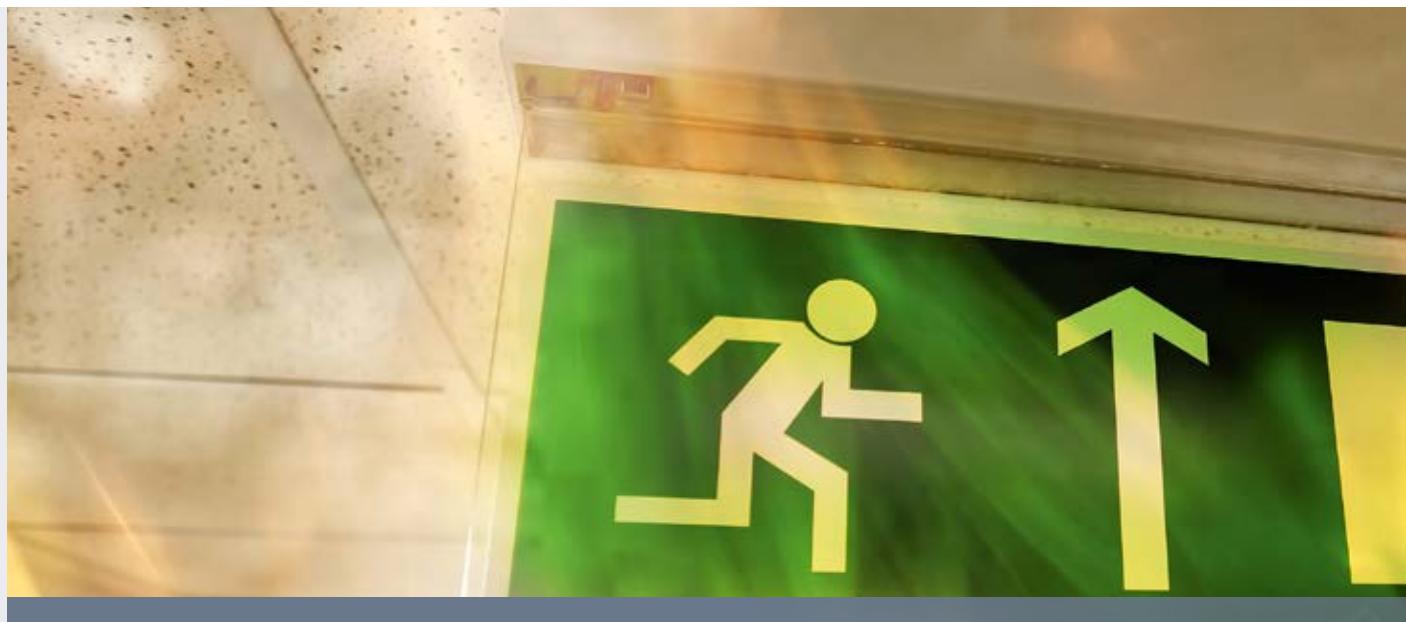

Proposal of the ZVEI for building classification

Building classes according to the German Model Building Code				ZVEI proposal	
Class	Description			Minimum requirement	
	Building (except escape route)	Escape route			
1	Free-standing buildings and free-standing buildings used for agricultural or forestry purposes	up to 7 m high	with a total surface area or no more than 400 m ²	E _{ca}	–
2	Building	up to 7 m high	with a total surface area or no more than 400 m ²	E _{ca}	–
3	Other buildings	up to 7 m high	–	E _{ca}	B2 _{ca} s1 d1 a1

On the safe side with LEONI

LEONI has been one of the world's leading providers of safety cables for many years. Whether infrastructure, energy, data or communication cables:

LEONI offers the best cable technology that is currently available for fire protection.

In addition to standard cables corresponding to the new fire classes D_{ca} and E_{ca}, LEONI also provides fire class B2_{ca} cables. Euroclass B2_{ca} s1 d1 a1 fire-resistant cables offer increased safety due to:

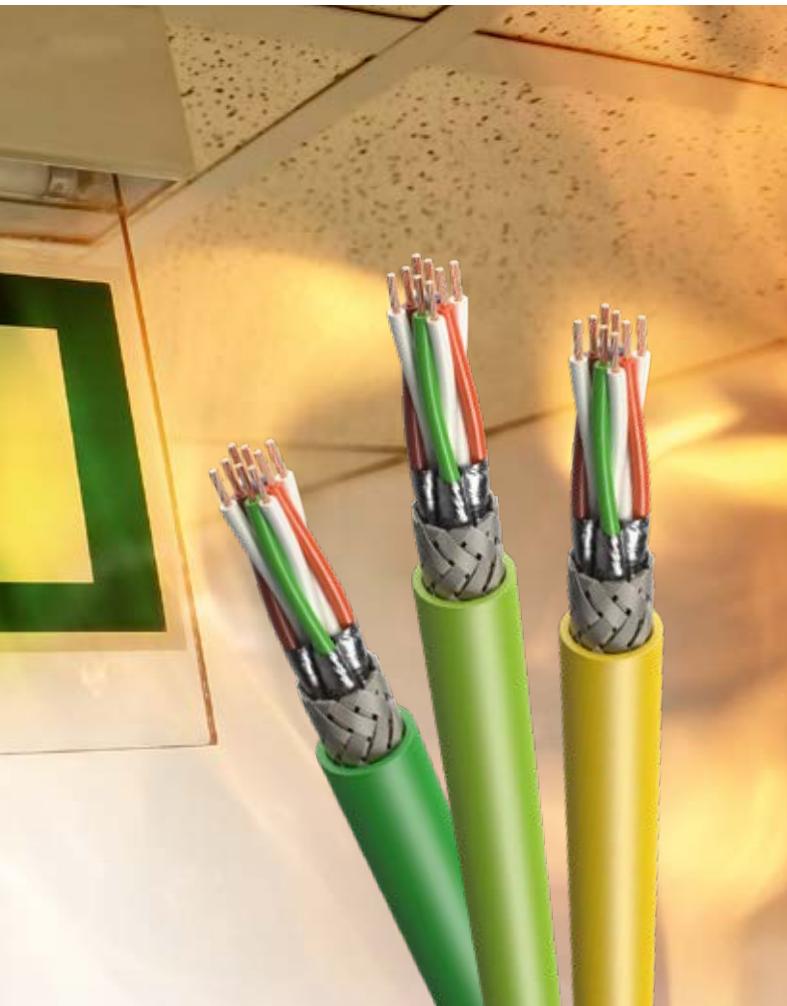

- **Reduced fire propagation**
- **Reduced heat development**
- **Low smoke density**
- **Low acid production**
- **Reduced droplet formation**

The quality of these cable products is assured by:

- **Conformity verification 1+**
- **Declaration of Performance**
- **CE mark**

Data cable colour code according to CPR classes

Increased safety for logistics, installation and building approval due to colour distinctions

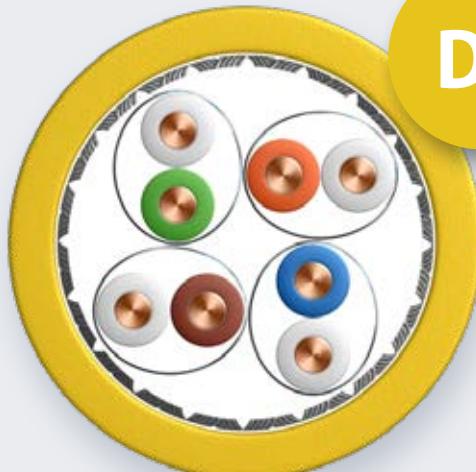

For simple and safe installation in buildings with different fire protection requirements, LEONI MegaLine® data cables are distinguished according to different CPR classes by means of colour coding.

As well as increasing safety, this colour scheme benefits logistics experts and fitters.

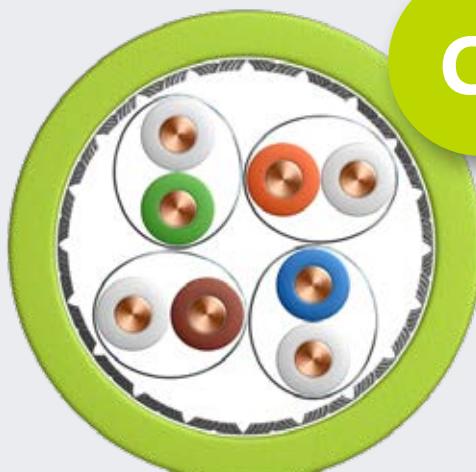

- **Cable according to CPR Class D_{ca} in "rape yellow"**
- **Cable according to CPR Class C_{ca} in "lime green"**
- **Cable according to CPR Class B2_{ca} in "yellow green"**

Cable sheath in **rape yellow**

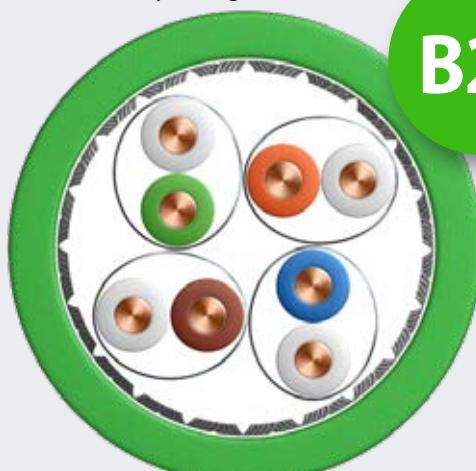

D_{ca}

Cable sheath in **lime green**

C_{ca}

Cable sheath in **yellow green**

B2_{ca}

Type codes

MegaLine® copper data cable

MegaLine® F10-130 S/F H	
Cabling class	G
Class 7 _A +	G
Class F	F
Class E	E
Class D	D
Bandwidth acc. to standard (factor 100)	
2000 MHz	20
1200 MHz	12
1000 MHz	10
600 MHz	6
500 MHz	5
250 MHz	2
100 MHz	1
MegaLine® bandwidth (factor 10)	
1500 MHz	150
1300 MHz	130
1150 MHz	115
900 MHz	90
800 MHz	80
700 MHz	70
450 MHz	45
300 MHz	30
200 MHz	20
TP (Twisted Pair) design	
Overall shielding (copper braiding)/individual shield (foil)	S/F
Overall shielding (foil)/individual shielding (foil)	F/F
Unshielded/individual shielding (foil)	U/F
Overall shielding (copper braiding & foil)/unshielded	SF/U
Overall shielding (foil)/unshielded	F/U
Unshielded/unshielded	U/U
Sheath/armouring	
Halogen free, flame-retardant	H
PVC	Y
PE	2Y
PUR	11Y
Sheath	(L)2Y
Reinforced sheath for industrial applications	V
Oil-resistant	Ö
Steel wire braiding	Q

The type codes for the MegaLine® copper data cables are compatible in structure with the SPACE concept. This makes it easier to assign cables to the old and new cabling classes and the corresponding categories.

The type codes also provide:

- Specifications for the bandwidth in comparison with the standard
- Specifications for the design according to international standard
- Specifications for the sheath material used

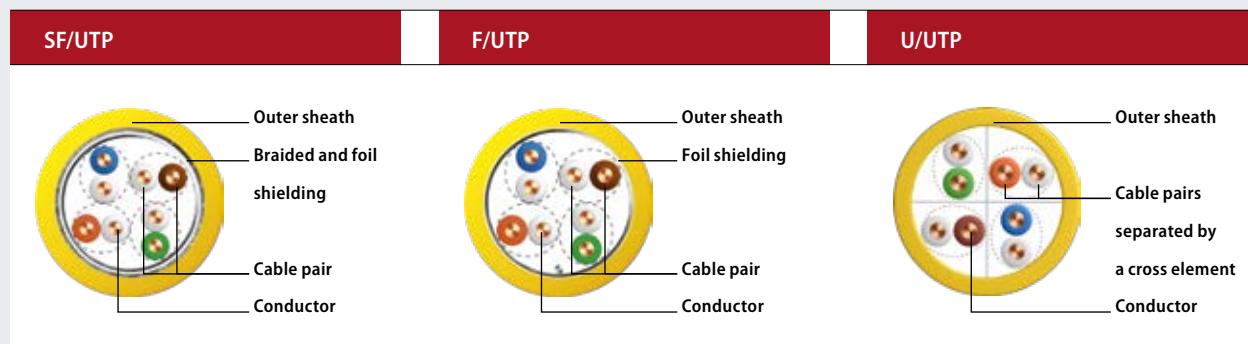

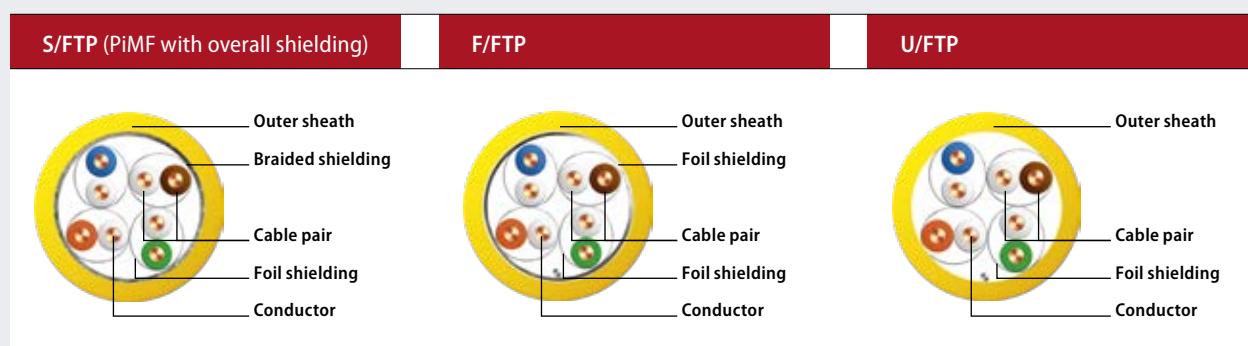

Copper data cables: MegaLine® F10-130 S/F H

F	according to cable class F _A (1000 MHz)
10	Bandwidth according to standard: 1000 MHz
130	MegaLine bandwidth: 1300 MHz
S/F	in S/FTP design
H	with halogen-free outer sheath

Cable types

MegaLine® copper data cable

		Cable type	xx/xxx
Overall shielding			
Foil shielding		F	
Braided shielding		S	
Braiding and foil shielding		SF	
Individual shielding			
Unshielded		U	
Foil shielding		F	
Symmetrical element		P	

Cable type

There are a large number of different type designations. In the second edition ISO/IEC 11801, a standardisation was defined which unambiguously determines the elements of the design.

SF/UTP Cable with overall braided and foil shielding / with unshielded individual elements.

S/FTP Cable with overall braided shielding / foil-shielded individual elements.

PiMF Pair in metal foil (xx/FTP)

MegaLine® G20 S/F

Category 8.2

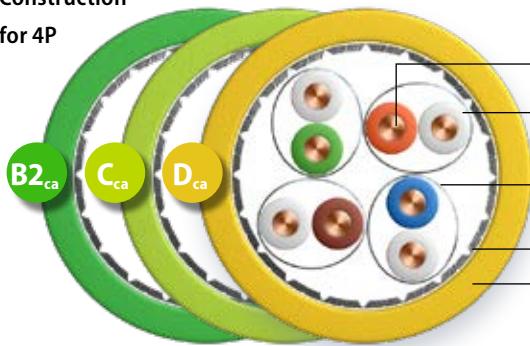

Types KS-02YSCH 4x2x0.62 mm/~AWG 22/1 PiMF
KS-02YSCH 2x(4x2x0,62 mm/~AWG 22/1 PiMF)

Advantages

- Data center cabling
- Better than Cat. 8.2
- bandwidth 2000 MHz
- excellent shielding characteristics
- VDE certified
- PVP-GHMT
- RoHS and REACH conformity

Construction

for 4P

Conductor	Bare copper wire, 0.62 mm/~AWG 22/1
Insulation	Cellular PE, core Ø: nominal value 1.6 mm
Twisting element	Pair
Individual shielding	Aluminium bonded polyester foil, metal on the outside (PiMF)
Twisting	4 pairs
Overall shielding	Tinned copper braid
Outer sheath	Halogen-free, flame-retardant compound

Fire behaviour

Flame retardancy	acc. to IEC 60332-3-24
Halogen free	acc. to IEC 60754-1/2
Smoke density	acc. to IEC 61034-1/2
Acid formation	acc. to EN 60754-2
Fire load (reference value)	0.74 MJ/m
EU Construction Products Regulation	acc. to EN 50575 / EN 50399

Security (fire behaviour)

S	1 IEC 60332-2-2	2 IEC-60332-1-2	3 IEC-60332-3-24	4 EFP Grade 1	5 EFP Grade 2
		E _{ca} /D _{ca}	E _{ca} /D _{ca}	C _{ca}	B2 _{ca}

Performance

Better than Category 8.2 acc. to IEC 61156-9, excellent NEXT, very low attenuation, excellent shielding characteristics (pairs and overall shielding), low skew, bandwidth (typical) 2000 MHz

Performance (cable class, bandwidth)

P	1 > Class E > 250 MHz	2 > Class E _A > 500 MHz	3 > Class F > 600 MHz	4 > Class F _A > 1000 MHz	5 > Class F _A + > 1200 MHz

Applications

Installation cable for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition) and data center cabling acc. to TR 11801-9901 11801-99-1.
Ideal for all applications of Classes D to F_A and Class II, multimedia (TV, video, data, voice) > 40 GbE acc. to IEEE 802.3 bq, cable sharing, VoIP, PoE/PoE+

Application (Ethernet, TV)

A	1 > 100 MbE	2 > 1 GbE	3 up to 10 GbE	4 > 10 GbE	5 > 10 GbE TV

Mechanical characteristics

Bending radius during installation after installation	8 x outer diameter (min.) 4 x outer diameter (min.)
Tensile strength (max.)	130 N
Crush strength	1000 N/100 mm
Impact strength (number of shocks)	10

Construction (conductor dimension, tensile strength)

C	1 AWG 27	2 AWG 26/25	3 AWG 24	4 AWG 23	5 AWG 22

Electromagnetic behaviour

Coupling resistance at 10 MHz (nom.)	2 mΩ/m
Shield attenuation up to 1200 MHz (nom.)	80 dB
Coupling attenuation up to 1200 MHz (nom.)	90 dB
Separating class acc. to EN 50174-2	d

EMC (coupling attenuation)

E	1 > 40 dB	2 > 50 dB	3 > 60 dB	4 > 70 dB	5 > 80 dB

Electrical characteristics (HF) at 20 °C

Acid formation	acc. to EN 60754-2
Fire load (reference value)	0.74 MJ/m (Sx), 1.5 MJ/m (Dx)
EU Construction Products Regulation	acc. to EN 50575 / EN 50399

Performance

Better than Category 7_A, acc. to EN 50288 and IEC 61156, excellent NEXT, low attenuation, excellent shielding characteristics (pairs and overall shielding), low skew, bandwidth (typical) 1500 MHz

Applications

Installation cable for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition). Ideal for all applications of Classes D to F_A, multimedia (TV, video, data, voice) > 10 GbE acc. to IEEE 802.3 an, cable sharing, VoIP, PoE/PoE+.

Mechanical characteristics

Bending radius during installation 8 x outer diameter (min.)
after installation 4 x outer diameter (min.)
Tensile strength (max.) 130 N (Sx), 260 N (Dx)
Crush strength 1000 N/100 mm
Impact strength (number of shocks) 10

Electromagnetic behaviour

Coupling resistance at 10 MHz (nom.) 2 mΩ/m
Shield attenuation up to 1200 MHz (nom.) 80 dB
Coupling attenuation up to 1200 MHz (nom.) 90 dB
Separating class acc. to EN 50174-2 d

Security (fire behaviour)

S	1 IEC 60332-2-2	2 IEC-60332-1-2	3 IEC-60332-3-24	4 EFP Grade 1	5 EFP Grade 2

MegaLine® F10-130 S/F

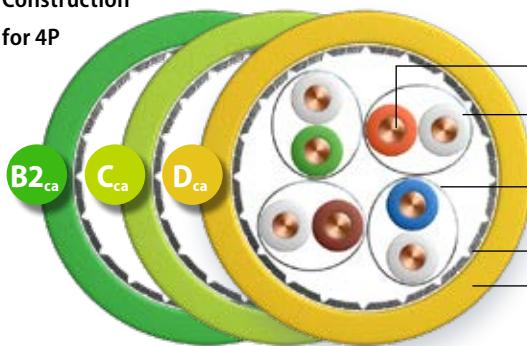

Category 7_A

Types KS-02YSCH 4x2xAWG 22/1 PiMF
KS-02YSCH 2x(4x2xAWG 22/1 PiMF)

Construction

for 4P

Conductor	Bare copper wire, AWG 22/1
Insulation	Cellular PE, core Ø: nominal value 1.6 mm
Twisting element	Pair
Individual shielding	Aluminium bonded polyester foil, metal on the outside (PiMF)
Twisting	4 pairs
Overall shielding	Tinned copper braid
Outer sheath	Halogen-free, flame-retardant compound

Fire behaviour

Flame retardancy	acc. to IEC 60332-3-24
Halogen free	acc. to IEC 60754-1/2
Smoke density	acc. to IEC 61034-1/2
Acid formation	acc. to EN 60754-2
Fire load (reference value)	0.70 MJ/m (Sx), 1.4 MJ/m (Dx) acc. to EN 50575 / EN 50399
EU Construction Products Regulation	

Performance

Better than Category 7 _A , acc. to EN 50288 and IEC 61156
excellent NEXT, low attenuation, excellent shielding characteristics (pairs and overall shielding), low skew, bandwidth (typical) 1300 MHz

Applications

Installation cable for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition).
Ideal for all applications of Classes D to F _A , multimedia (TV, video, data, voice) > 10 GbE acc. to IEEE 802.3 an, cable sharing, VoIP, PoE/PoE+.

Mechanical characteristics

Bending radius during installation after installation	8 x outer diameter (min.) 4 x outer diameter (min.)
Tensile strength (max.)	130 N (Sx), 260 N (Dx)
Crush strength	1000 N/100 mm
Impact strength (number of shocks)	10

Electromagnetic behaviour

Coupling resistance at 10 MHz (nom.)	5 mΩ/m
Shield attenuation up to 1000 MHz (nom.)	> 70 dB
Coupling attenuation up to 1000 MHz (nom.)	85 dB
Separating class acc. to EN 50174-2	d

Advantages

- Better than Category 7_A
- bandwidth 1300 MHz
- excellent shielding characteristics
- VDE certified
- PVP-GHMT
- RoHS and REACH conformity

Security (fire behaviour)

MegaLine® F10-115 S/F

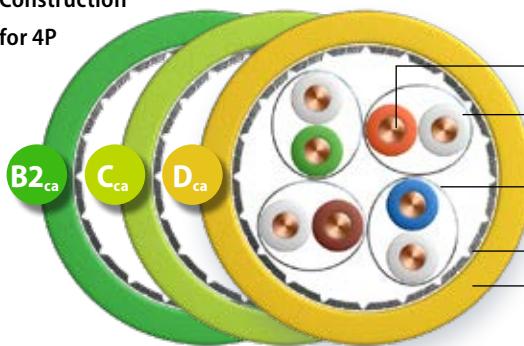

Category 7_A

Types KS-02YSCH 4x2xAWG 23/1 PiMF
KS-02YSCH 2x(4x2xAWG 23/1 PiMF)

Construction

for 4P

Conductor	Bare copper wire, AWG 23/1
Insulation	Cellular PE, core Ø: nominal value 1.4 mm
Twisting element	Pair
Individual shielding	Aluminium bonded polyester foil, metal on the outside (PiMF)
Twisting	4 pairs
Overall shielding	Tinned copper braid
Outer sheath	halogen-free, flame-retardant compound

Fire behaviour

Flame retardancy	acc. to IEC 60332-3-24
Halogen free	acc. to IEC 60754-1/2
Smoke density	acc. to IEC 61034-1/2
Acid formation	acc. to EN 60754-2
Fire load (reference value)	0.60 MJ/m (Sx), 1.2 MJ/m (Dx)
EU Construction Products Regulation	acc. to EN 50575 / EN 50399

Performance

Better than Category 7_A acc. to EN 50288 and IEC 61156, excellent NEXT, low attenuation, excellent shielding characteristics (pairs and overall shielding), low skew, bandwidth (typical) 1200 MHz

Applications

Installation cable for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition). Ideal for all applications of Classes D to F_A, **multimedia** (video, data, voice) > 10 GbE acc. to IEEE 802.3 an, cable sharing, VoIP, PoE/PoE+.

Mechanical characteristics

Bending radius during installation	8 x outer diameter (min.)
after installation	4 x outer diameter (min.)
Tensile strength (max.)	110 N (Sx), 220 N (Dx)
	440 N (4-fold), 650 N (6-fold)
Crush strength	1000 N/100 mm
Impact strength (number of shocks)	10

Electromagnetic behaviour

Coupling resistance at 10 MHz (nom.)	5 mΩ/m
Shield attenuation up to 1000 MHz (nom.)	70 dB
Coupling attenuation up to 1000 MHz (nom.)	85 dB
Separating class acc. to EN 50174-2	d

Security (fire behaviour)

S	1 IEC 60332-2-2	2 IEC-60332-1-2	3 IEC-60332-3-24	4 EFP Grade 1	5 EFP Grade 2
	E _{ca} /D _{ca}	E _{ca} /D _{ca}	C _{ca}	B2 _{ca}	

Performance (cable class, bandwidth)

P	1 > Class E > 250 MHz	2 > Class E _A > 500 MHz	3 > Class F > 600 MHz	4 > Class F _A > 1000 MHz	5 > Class F _A + > 1200 MHz

Application (ethernet, TV)

A	1 > 100 MbE	2 > 1 GbE	3 up to 10 GbE	4 > 10 GbE	5 > 10 GbE TV

Construction (conductor dimension, tensile strength)

C	1 AWG 27	2 AWG 26/25	3 AWG 24	4 AWG 23	5 AWG 22

EMC (coupling attenuation)

MegaLine® E5-70 S/F

Category 6_A

Types KS-02YSCH 4x2xAWG 23/1 PiMF
KS-02YSCH 2x(4x2xAWG 23/1 PiMF)

Construction for 4P

Conductor	Bare copper wire, AWG 23/1
Insulation	Cellular PE, core Ø: nominal value 1.24 mm
Twisting element	Pair
Individual shielding	Aluminium bonded polyester foil, metal on the outside (PiMF)
Twisting	4 pairs
Overall shielding	Tinned copper braid
Outer sheath	halogen-free, flame-retardant compound

Fire behaviour	
Flame retardancy	acc. to IEC 60332-3-24
Halogen free	acc. to IEC 60754-1/2
Smoke density	acc. to IEC 61034-1/2
Acid formation	acc. to EN 60754-2
Fire load (reference value)	0.60 MJ/m (Sx), 1.2 MJ/m (Dx)
EU Construction Products Regulation	acc. to EN 50575 / EN 50399

Performance	
Better than Category 6 _A acc. to EN 50288 and IEC 61156, very good NEXT, excellent shielding characteristics (pairs and overall shielding), low skew, bandwidth (typical) 700 MHz	

Applications	
Installation cable for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition).	
Ideal for all applications of classes D to E _A up to 10 GbE acc. to IEEE 802.3 an, cable sharing, VoIP, PoE/PoE+.	

Mechanical characteristics	
Bending radius during installation after installation	8 x outer diameter (min.) 4 x outer diameter (min.)
Tensile strength (max.)	110 N (Sx), 220 N (Dx)
Crush strength	1000 N/100 mm
Impact strength (number of shocks)	10

Electromagnetic behaviour	
Coupling resistance at 10 MHz (nom.)	5 mΩ/m
Shield attenuation up to 1000 MHz (nom.)	60 dB
Coupling attenuation up to 1000 MHz (nom.)	80 dB
Separating class acc. to EN 50174-2	c

Advantages

- Better than Category 6_A
- bandwidth 700 MHz
- excellent shielding characteristics
- VDE certified
- PVP-GHMT
- RoHS and REACH conformity

Security (fire behaviour)

S	1 IEC 60332-2-2	2 IEC-60332-1-2	3 IEC-60332-3-24	4 EFP Grade 1	5 EFP Grade 2

MegaLine® E2-30 U/U

Category 6

Type KS-2YH 4x2xAWG 23/1

Construction for 4P

Conductor	Bare copper wire, AWG 23/1
Insulation	PE
Twisting element	Pair
Twisting	4 pairs separated by a cross element
Outer sheath	halogen-free, flame-retardant compound

Fire behaviour	
Flame retardancy	acc. to IEC 60332-1-2
Halogen free	acc. to IEC 60754-1/2
Smoke density	acc. to IEC 61034-1/2
Acid formation	acc. to EN 60754-2
Fire load (reference value)	0.65 MJ/m
EU Construction Products Regulation	acc. to EN 50575 / EN 50399

Performance	
Better than Category 6 acc. to EN 50288 and IEC 61156, bandwidth (typical)	300 MHz

Applications	
Installation cable for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition).	
Ideal for all applications of classes D to E up to 1 GbE acc. to IEEE 802.3 ab, VoIP, PoE/PoE+.	

Mechanical characteristics	
Bending radius during installation	8 x outer diameter (min.)
after installation	4 x outer diameter (min.)
Tensile strength (max.)	110 N
Crush strength	1000 N/100 mm
Impact strength (number of shocks)	10

Electromagnetic behaviour	
Coupling attenuation up to 1000 MHz (nom.)	45 dB
Separating class acc. to EN 50174-2	b

Advantages

- Better than Category 6
- bandwidth 300 MHz
- RoHS and REACH conformity

Security (fire behaviour)

MegaLine® Pro 1500

Category 7_A

Types KS-02YSCH 4x2xAWG22/1 PiMF
KS-02YSCH 2x(4x2xAWG22/1 PiMF)

Construction for 4P

Conductor	Bare copper wire, AWG 22/1
Insulation Twisting element	Cellular PE, core Ø: nominal value 1.6 mm Pair
Individual shielding	Aluminium bonded polyester foil, metal on the outside (PiMF)
Twisting	4 pairs
Overall shielding	Tinned copper braid
Outer sheath	halogen-free, flame-retardant compound

Fire behaviour	
Flame retardancy	acc. to IEC 60332-3-24
Halogen free	acc. to IEC 60754-1/2
Smoke density	acc. to IEC 61034-1/2
Fire load (reference value)	0.65 MJ/m (Sx), 1.33 MJ/m (Dx)
Acid formation	acc. to EN 60754-2
EU Construction Products Regulation	acc. to EN 50575 / EN 50399

Performance	
Better than Category 7 _A acc. to EN 50288 and IEC 61156	

excellent NEXT, low attenuation, excellent shielding characteristics (pairs and overall shielding), low skew, bandwidth (typical) 1500 MHz

Applications	
Installation cable for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition).	
Ideal for all applications of Classes D to F _A , multimedia (video, data, voice)	
> 10 GbE acc. to IEEE 802.3 an, cable sharing, VoIP, PoE/PoE+.	

Mechanical characteristics	
Bending radius during installation	8 x outer diameter (min.)
after installation	4 x outer diameter (min.)
Tensile strength (max.)	110 N (Sx), 220 N (Dx)
Crush strength	1000 N/100 mm
Impact strength (number of shocks)	10

Electromagnetic behaviour	
Coupling resistance at 10 MHz (nom.)	5 mΩ/m
Shield attenuation up to 1000 MHz (nom.)	70 dB
Coupling attenuation up to 1000 MHz (nom.)	85 dB
Separating class acc. to EN 50174-2	d

Advantages

MegaLine® Pro 1300

Category 7_A

Types KS-02YSCH 4x2x0,62 mm/~AWG 22/1 PiMF
KS-02YSCH 4x2x0.62 mm/~AWG 22/1 PiMF

Construction for 4P

Conductor	Bare copper wire, 0.62mm/~AWG 22/1
Insulation	Cellular PE, core Ø: nominal value 1.5 mm
Twisting element	Pair
Individual shielding	Aluminium bonded polyester foil, metal on the outside (PiMF)
Twisting	4 pairs
Overall shielding	Tinned copper braid
Outer sheath	halogen-free, flame-retardant compound

Security (fire behaviour)

S	1 IEC 60332-2-2	2 IEC-60332-1-2	3 IEC-60332-3-24	4 EFP Grade 1	5 EFP Grade 2

MegaLine® Pro 1200

Category 7A

Types KS-02YSCH 4x2xAWG 23/1 PiMF
KS-02YSCH 2x(4x2xAWG 23/1 PiMF)

Construction for 4P

Conductor	Bare copper wire, AWG 23/1
Insulation	Cellular PE, core Ø: nominal value 1.4 mm
Twisting element	Pair
Individual shielding	Aluminium bonded polyester foil, metal on the outside (PiMF)
Twisting	4 pairs
Overall shielding	Tinned copper braid
Outer sheath	halogen-free, flame-retardant compound

Fire behaviour
Flame retardancy acc. to IEC 60332-3-24
Halogen free acc. to IEC 60754-1/2
Smoke density acc. to IEC 61034-1/2
Acid formation acc. to EN 60754-2
Fire load (reference value) 0.60 MJ/m (Sx), 1.2 MJ/m (Dx) acc. to EN 50575 / EN 50399
EU Construction Products Regulation

Performance
Better than Category 7, acc. to EN 50288 and IEC 61156 excellent NEXT, excellent shielding characteristics (pairs and overall shielding), low skew, bandwidth (typical) 1200 MHz

Applications
Installation cable for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition).
Ideal for all applications of Classes D to F _A , multimedia (video, data, voice) > 10 GbE acc. to IEEE 802.3 an, cable sharing, VoIP, PoE/PoE+.

Mechanical characteristics
Bending radius during installation 8 x outer diameter (min.) after installation 4 x outer diameter (min.)
Tensile strength (max.) 110 N (Sx), 220 N (Dx)
Crush strength 1000 N/100 mm
Impact strength (number of shocks) 10

Electromagnetic behaviour
Coupling resistance at 10 MHz (nom.) 5 mΩ/m
Shield attenuation up to 1000 MHz (nom.) 70 dB
Coupling attenuation up to 1000 MHz (nom.) 85 dB
Separating class acc. to EN 50174-2 d

Advantages

- Better than Category 7_A
- bandwidth 1200 MHz
- RoHS and REACH conformity

Security (fire behaviour)

MegaLine® G20 S/F flex

Category 8.2

Type KS-02YSCH 4x2xAWG 26/7 PiMF

Construction for 4P

Conductor	Bare stranded copper wire, AWG26/7
Insulation	Cellular PE, core-diameter: max. 1.05 mm
Twisting element	Pair
Individual shielding	Aluminium bonded polyester foil, metal on the outside (PiMF)
Twisting	4 pairs
Overall shielding	Tinned copper braid
Outer sheath	halogen-free, flame-retardant compound

Fire behaviour	
Flame retardancy	acc. to IEC 60332-1-2
Halogen free	acc. to IEC 60754-1/2
Smoke density	acc. to IEC 61034-1/2
Fire load (reference value)	0.38 MJ/m
EU Construction Products Regulation	acc. to EN 50575 / EN 50399

Performance	
Better than Category 8.2 acc. to draft IEC 61156-10	
excellent NEXT, low attenuation, excellent shielding characteristics (pairs and overall shielding), low skew, bandwidth (typical) 2000 MHz	

Applications	
Connection cable and patch cord for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (2nd Edition) and for data center cabling acc. to ISO/IEC 24764 and EN 50173-5, as well as PDTR 11801-99-9901. Ideal for all applications of Classes D to F, and Class II, multimedia (TV, video, data, voice) > 40 GbE acc. to IEEE 802.3 bq (draft), cable sharing, VoIP, PoE/PoE+.	

Mechanical characteristics	
Bending radius in operation	5 x outer diameter (min.)
Tensile strength (max.)	60 N

Electromagnetic behaviour	
Coupling resistance at 10 MHz (nom.)	5 mΩ/m
Shield attenuation up to 1000 MHz (nom.)	60 dB
Coupling attenuation up to 1000 MHz (nom.)	85 dB
Separating class acc. to EN 50174-2	d

MegaLine® F10-120 S/F flex

Category 7

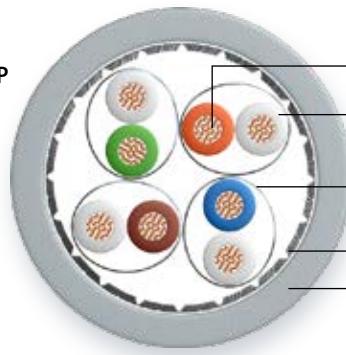

Types KS-02YSCH 4x2xAWG 26/7 PiMF

Advantages

- Better than Category 7
- bandwidth 1200 MHz
- excellent shielding characteristics
- VDE certified
- RoHS and REACH conformity

Construction for 4P

Conductor	Bare stranded copper wire, AWG26/7
Insulation	Cellular PE, core-diameter: max. 1.05 mm
Twisting element	Pair
Individual shielding	Aluminium bonded polyester foil, metal on the outside (PiMF)
Twisting	4 pairs
Overall shielding	Tinned copper braid
Outer sheath	halogen-free, flame-retardant compound

Fire behaviour	
Flame retardancy	acc. to IEC 60332-1-2
Halogen free	acc. to IEC 60754-1/2
Smoke density	acc. to IEC 61034-1/2
Fire load (reference value)	0.38 MJ/m (Sx)
EU Construction Products Regulation	acc. to EN 50575 / EN 50399

Performance	
Better than Category 7 acc. to EN 50288 and IEC 61156	
excellent NEXT, low attenuation, excellent shielding characteristics (pairs and overall shielding), low skew, bandwidth (typical) 1200 MHz	

Applications	
Collection point, connection cables and patch cords for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition), as well as ISO/IEC 24764 and EN 50173-5.	
Ideal for all applications of Classes D to F _a , multimedia (TV, video, data voice) > 10 GbE acc. to IEEE 802.3 an, cable sharing, VoIP, PoE/PoE+.	

Mechanical characteristics	
Bending radius in operation	5 x outer diameter (min.)
Tensile strength (max.)	60 N (Sx), 400 N (8-fold)

Electromagnetic behaviour	
Coupling resistance at 10 MHz (nom.)	5 mΩ/m
Shield attenuation up to 1000 MHz (nom.)	60 dB
Coupling attenuation up to 1000 MHz (nom.)	85 dB
Separating class acc. to EN 50174-2	d

MegaLine® F10-130 S/F (L)2Y

Category 7A

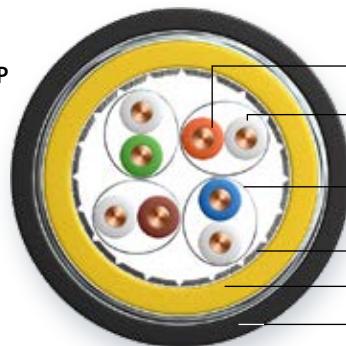

Type KS-02YSCH(L)2Y 4x2xAWG 22/1 PiMF

Advantages

- Better than Category 7_A
- bandwidth 1300 MHz
- excellent shielding characteristics
- for installation outdoors and in the ground
- VDE certified
- PVP-GHMT
- RoHS and REACH conformity

Construction for 4P

Conductor	Bare copper wire, AWG 22/1
Insulation	Cellular PE, core Ø: nominal value 1.6 mm
Twisting element	Pair
Individual shielding	Aluminium bonded polyester foil, metal on the outside (PiMF)
Twisting	4 pairs
Overall shielding	Tinned copper braid
Inner sheath	halogen-free, flame-retardant compound
Outer sheath	AL-PE

Fire behaviour	
Halogen free	acc. to IEC 60754-1/2
Smoke density	acc. to IEC 61034-1/2
Fire load (reference value)	3.04 MJ/m

Performance	
Better than Category 7 acc. to EN 50288 and IEC 61156 excellent NEXT, low attenuation, excellent shielding characteristics (pairs and overall shielding), low skew, bandwidth (typical) 1300 MHz	

Applications	
Installation cable for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition).	
Ideal for all applications of Classes D to F _A , multimedia (video, data voice)	
> 10 GbE acc. to IEEE 802.3 an, cable sharing, VoIP, PoE/PoE+.	
For use outdoors and underground installation.	

Mechanical characteristics	
Bending radius during installation after installation	8 x outer diameter (min.) 4 x outer diameter (min.)
Tensile strength (max.)	130 N
Crush strength	2000 N/100 mm
Impact strength (number of shocks)	20

Electromagnetic behaviour	
Coupling resistance at 10 MHz (nom.)	5 mΩ/m
Shield attenuation up to 1000 MHz (nom.)	70 dB
Coupling attenuation up to 1000 MHz (nom.)	85 dB
Separating class acc. to EN 50174-2	d

Security (fire behaviour)

S	1 IEC 60332-2-2	2 IEC-60332-1-2	3 IEC-60332-3-24	4 EFP Grade 1	5 EFP Grade 2

Performance (cable class, bandwidth)

P	1 > Class E > 250 MHz	2 > Class E _A > 500 MHz	3 > Class F > 600 MHz	4 > Class F _A > 1000 MHz	5 > Class F _A + > 1200 MHz

Industrial application (ethernet, TV)

I	1 > 100 MbE	2 > 1 GbE	3 up to 10 GbE	4 > 10 GbE	5 > 10 GbE TV

Construction (conductor dimension, tensile strength)

C	1 AWG 27	2 AWG 26/25	3 AWG 24	4 AWG 23	5 AWG 22

EMC (coupling attenuation)

E	1 > 40 dB	2 > 50 dB	3 > 60 dB	4 > 70 dB	5 > 80 dB

* EN 50288-4-1 (2014)/IEC 61156-5 (2009)

Electrical characteristics (LF) at 20 °C

Direct current resistance	max.	57.1 Ω/km
Insulation resistance	min.	5 GΩ x km
Mutual capacitance	approx.	40 pF/m
Capacitive coupling (e)	approx.	1100 pF/km
Signal tempo (c)	approx.	0.80
Propagation delay	approx.	420 ns/100 m
Skew at 100 MHz	approx.	5 ns/100 m
Charact. impedance	at 100 MHz	100 ± 5 Ω
Testing voltage U _{eff}		1000 V
Operating voltage	max.	125 V

Thermal properties

For fixed installation	-25 °C to +70 °C
For mobile operation	-10 °C bis +50 °C

Chemical characteristics

Free of hazardous substances acc. to RoHS 2011/65/EU	
UV resistance according to UL 1581 and ISO 4892

MegaLine® F6-90 S/F 2Y

Category 7

Type KS-02YSC2Y 4x2xAWG 23/1 PiMF

Construction for 4P

Conductor	Bare copper wire, AWG 23/1
Insulation	Cellular PE, core Ø: nominal value 1.4 mm
Twisting element	Pair
Individual shielding	Aluminium bonded polyester foil, metal on the outside (PiMF)
Twisting	4 pairs
Overall shielding	Tinned copper braid
Outer sheath	PE

Fire behaviour

Halogen free
acc. to IEC 60754-1/2
Smoke density
acc. to IEC 61034-1/2

Performance

Better than Category 7 acc. to EN 50288 and IEC 61156
excellent NEXT, excellent shielding characteristics (pairs and overall shielding),
low skew, bandwidth (typical) 900 MHz

Applications

Installation cable for use in structured cabling acc. to ISO/IEC 11801 and
EN 50173 (3rd Edition).
Ideal for all applications of Classes D to F, multimedia(video, data voice)
> 10 GbE acc. to IEEE 802.3 an, cable sharing, VoIP, PoE/PoE+.
For use outdoors and underground installation.

Mechanical characteristics

Bending radius during installation	8 x outer diameter (min.)
after installation	4 x outer diameter (min.)
Tensile strength (max.)	110 N
Crush strength	2000 N/100 mm
Impact strength (number of shocks)	20

Electromagnetic behaviour

Coupling resistance at 10 MHz (nom.)	5 mΩ/m
Shield attenuation up to 1000 MHz (nom.)	70 dB
Coupling attenuation up to 1000 MHz (nom.)	85 dB
Separating class acc. to EN 50174-2	d

Advantages

- Better than Category 7
- bandwidth 1000 MHz
- excellent shielding characteristics
- for installation outdoors and in the ground
- PVP-GHMT
- RoHS and REACH conformity

Security (fire behaviour)

Outer sheath	PUR

Fire behaviour	
Flame retardancy	acc. to IEC 60332-2-2
Halogen-free	acc. to 60754-1/2
Smoke density	acc. to IEC 61034-1/2
Fire load (reference value)	0.7 MJ/m

Performance	
Better than Category 7 acc. to EN 50288 and IEC 61156	
excellent NEXT, low attenuation, excellent shielding characteristics (pairs and overall shielding), low skew, bandwidth (typical) 1200 MHz	

Applications	
Connection cable and patch cord for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition). Ideal for all applications of Classes D to F _A , multimedia (TV, video, data voice) > 10 GbE acc. to IEEE 802.3 an, cable sharing, VoIP, PoE/PoE+.	
For use in harsh environments due to very rugged PUR sheath.	

Mechanical characteristics	
Bending radius in operation	5 x outer diameter (min.)
Tensile strength (max.)	60 N

Electromagnetic behaviour	
Coupling resistance at 10 MHz (nom.)	5 mΩ/m
Shield attenuation up to 1000 MHz (nom.)	60 dB
Coupling attenuation up to 1000 MHz (nom.)	85 dB
Separating class acc. to EN 50174-2	d

Advantages

- Better than Category 7
- bandwidth 1200 MHz
- excellent shielding characteristics
- for installation in outdoor areas and in harsh environments
- RoHS and REACH conformity

MegaLine® F6-70 S/F 11Y flex

Category 7

Type KS-02YSC11Y 4x2xAWG 24/7 PiMF

Construction for 4P

Conductor	bare copper wire, AWG 24/7
Insulation	Cellular PE, core Ø: nominal value 1.55 mm
Twisting element	Pair
Individual shielding	Aluminium bonded polyester foil, metal on the outside (PiMF)
Twisting	4 pairs
Overall shielding	Tinned copper braid
Outer sheath	PUR, flame-retardant

Fire behaviour	
Flame retardancy	acc. to IEC 60332-1-2
Halogen free	acc. to IEC 60754-1/2
Smoke density	acc. to IEC 61034-1/2
Fire load (reference value)	0.99 MJ/m

Performance	
Better than Category 7 acc. to EN 50288 and IEC 61156	
excellent NEXT, low attenuation, excellent shielding characteristics (pairs and overall shielding), low skew, bandwidth (typical) 700 MHz	

Applications	
Connection cable and patch cord for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition).	
Ideal for all applications of Classes D to F, multimedia (video, data, voice)	
> 10 GbE acc. to IEEE 802.3 an, cable sharing, VoIP, PoE/PoE+.	
For use in harsh environments due to very rugged PUR sheath.	

Mechanical characteristics	
Bending radius in operation	5 x outer diameter (min.)
Tensile strength (max.)	100 N
Crush strength	1000 N/100 mm
Impact strength (number of shocks)	10

Electromagnetic behaviour	
Coupling resistance at 10 MHz (nom.)	5 mΩ/m
Shield attenuation up to 1000 MHz (nom.)	60 dB
Coupling attenuation up to 1000 MHz (nom.)	90 dB
Separating class acc. to EN 50174-2	d

Advantages

- Better than Category 7
- bandwidth 700 MHz
- excellent shielding characteristics
- for installation in outdoor areas and in harsh environments
- RoHS and REACH conformity

MegaLine® D1-20 SF/U flex CI

Category 5

CE

Type KS-v2Y(ST+C)H CI 1x4xAWG 22/7

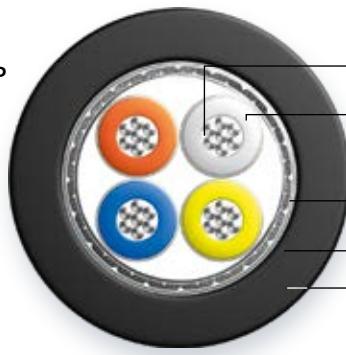

Advantages

- Better than Category 5
- bandwidth 200 MHz
- excellent shielding characteristics
- Circuit integrity
- RoHS and REACH conformity

System integrity on exposure to fire for at least.

90 minutes

Construction for 4P

Conductor	bare cooper wire, AWG 22/7
Insulation	PE core
Twisting element	Fire protection foil
Taping	4 cores
Overall shielding	Aluminium bonded polyester foil and copper braiding, optical coverage approx. 85 %
Taping	Fire protection foil
Outer sheath	halogen-free, flame-retardant compound

Fire behaviour	
Flame retardancy	acc. to IEC 60332-3-24/EN 50266-2-4
Halogen free	acc. to IEC 60754-1/2
Smoke density	acc. to IEC 61034-1/2
Fire load (reference value)	0.5 MJ/m

Performance	
Better than Category 5 acc. to EN 50288 and IEC 61156 excellent shielding characteristics, circuit integrity acc. to FE90 IEC 60331-23, bandwidth (typical) 200 MHz	

Applications	
Installation cable with circuit integrity for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition). Ideal for all applications of Classes D up to 1 GbE acc. to IEEE 802.3 ab, cable sharing, VoIP, PoE/PoE+ and for fire alarm systems.	

Mechanical characteristics	
Bending radius during installation after installation	8 x outer diameter (min.) 4 x outer diameter (min.)
Tensile strength (max.)	60 N
Crush strength	1000 N/100 mm
Impact strength (number of shocks)	10

Electromagnetic behaviour	
Coupling resistance at 10 MHz (nom.)	5 mΩ/m
Shield attenuation up to 1000 MHz (nom.)	60 dB
Coupling attenuation up to 1000 MHz (nom.)	85 dB
Separating class acc. to EN 50174-2	d

MegaLine® D1-20 S/U 11Y superflex

Category 5

Type KS-6Y3GC11Y 4x2xAWG 26/19

Construction for 4P

Conductor	bare copper wire, AWG 26/19
Insulation	FEP, core Ø: nominal value 1.0 mm
Twisting element	Pair
Twisting	4 pairs
Taping	Fleece foiling
Inner sheath	EPDM
Taping	Fleece foiling
Overall shielding	copper braiding, optical coverage approx. 90 %
Outer sheath	PUR

Fire behaviour

Flame retardancy acc. to IEC 60332-2-2
Fire load (reference value) 0.7 MJ/m

Performance

Better than Category 5 acc. to EN 50288 and IEC 61156
excellent shielding properties, bandwidth (typical) 100 MHz

Applications

Connection cable and patch cord for use in structured cabling acc. to ISO/IEC 11801 and EN 50173 (3rd Edition). Ideal for all applications of Classes D up to 1 GbE acc. to IEEE 802.3 ab, VoIP, PoE/PoE+.
For use in harsh environments due to very rugged EPDM inner sheath and highly rugged PUR outer sheath. Suitability for drag chain use (Type 5 million cycles).
Torsional suitability acc. to EN 50289-3-10. Suitable for use in cleanrooms of air purity class 2 acc. to ISO 14644-1

Mechanical characteristics

Bending radius in operation	5 x outer diameter (min.)

MegaLine® – Ready for 40 GBit/s

Perfection in efficiency, future-orientation & electrical performance

The MegaLine® comprises the new G20 S/F and G20 S/F flex data cable and the 40-Gbit/s-compatible MegaLine® Connect100 cable plug. The connection is created as required by simply plugging in the desired jack module (RJ45, ARJ45™, TERA™, interface).

**MegaLine® G20 S/F acc. to IEC 61156-9
Cat.8.2**

Economy >>

- Unique cable connection with multiple uses
- Replaceable jack modules
- Varying performance
- Low maintenance and service costs
- Short assembly and upgrade time
- Pre-assembled links (low downtime)

Performance >>

Ready for 25 / 40 GBASE-T

Easy to assemble >>

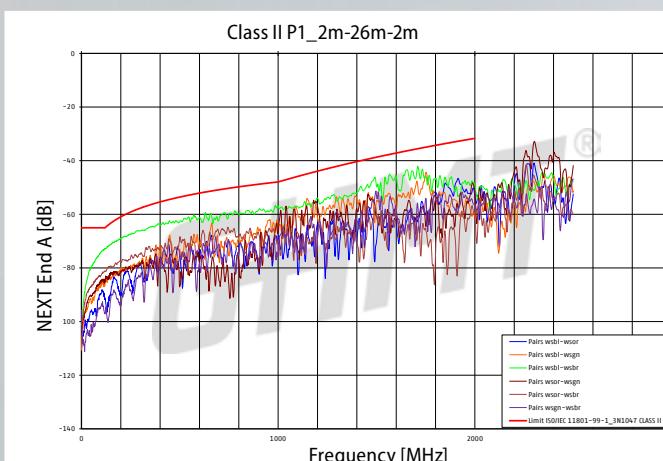

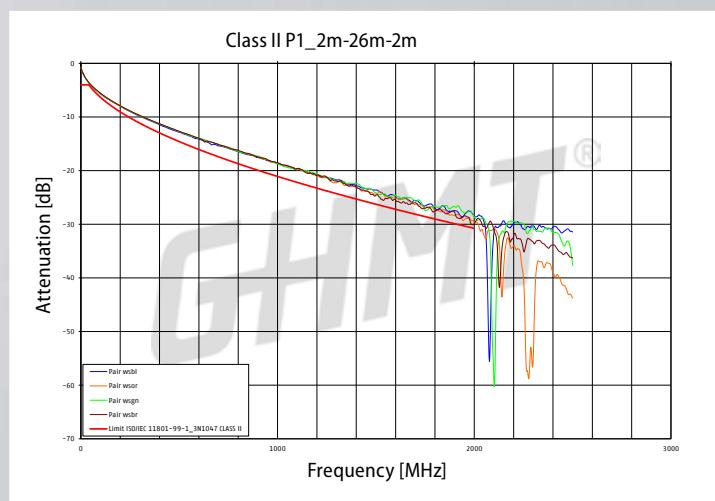

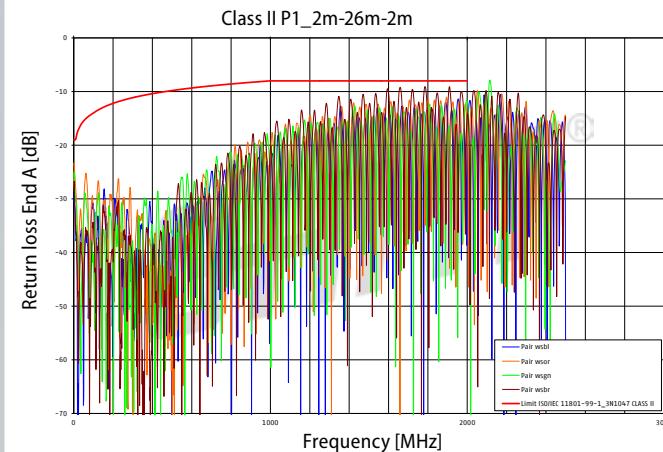

- Unique cable connection with multiple uses
- Modular construction
- Pre-assembled links

Outstanding quality >>

Independently monitored by the
GHMT Premium Verification Program

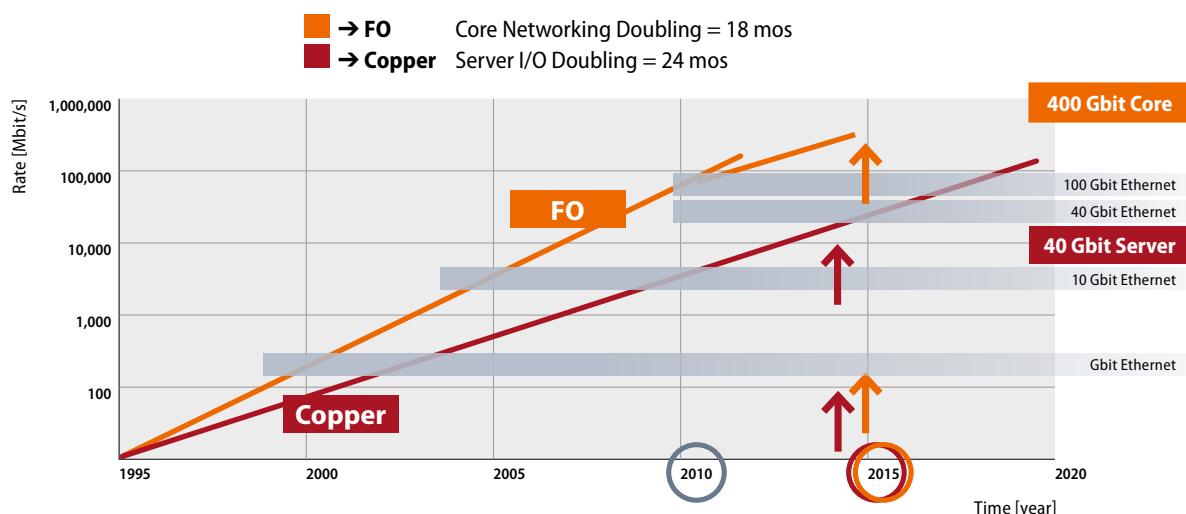

The combination of high-quality individual components is reflected in the results of the channel measurement (class II). According to the current Edition of ISO/IEC 11801 (3rd edition), good reserves are achieved.

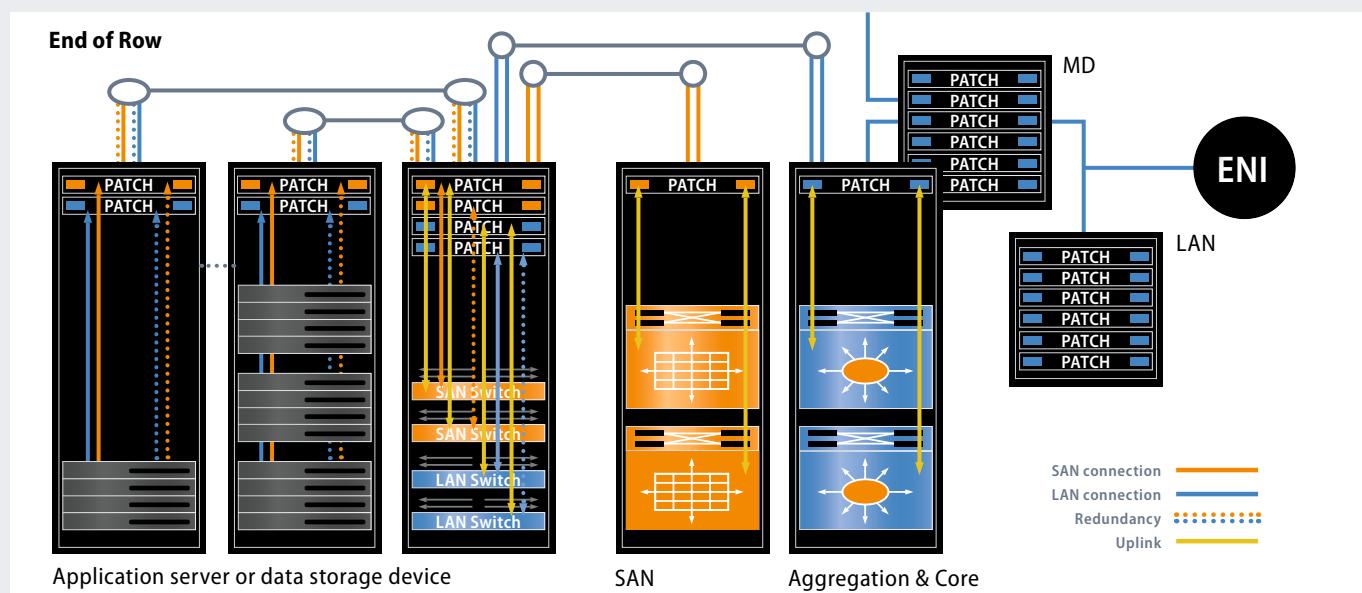

Technological leap: 40 GBASE-T

The next 40 GBASE-T technological leap, driven by the demand for increasingly higher performance on the active component side, requires the technological improvement of passive system technology.

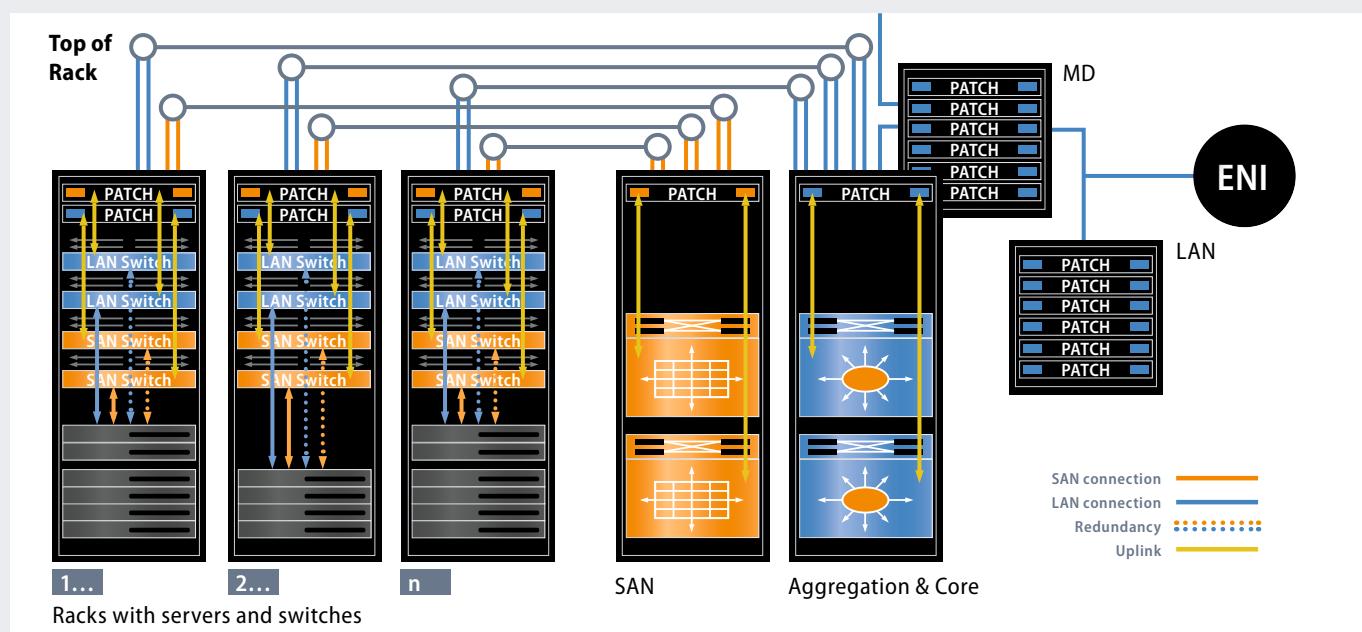

MegaLine® – 40 GBASE-T over copper

40 GBASE-T system technology areas of application: End of Row / Top of Rack topology:

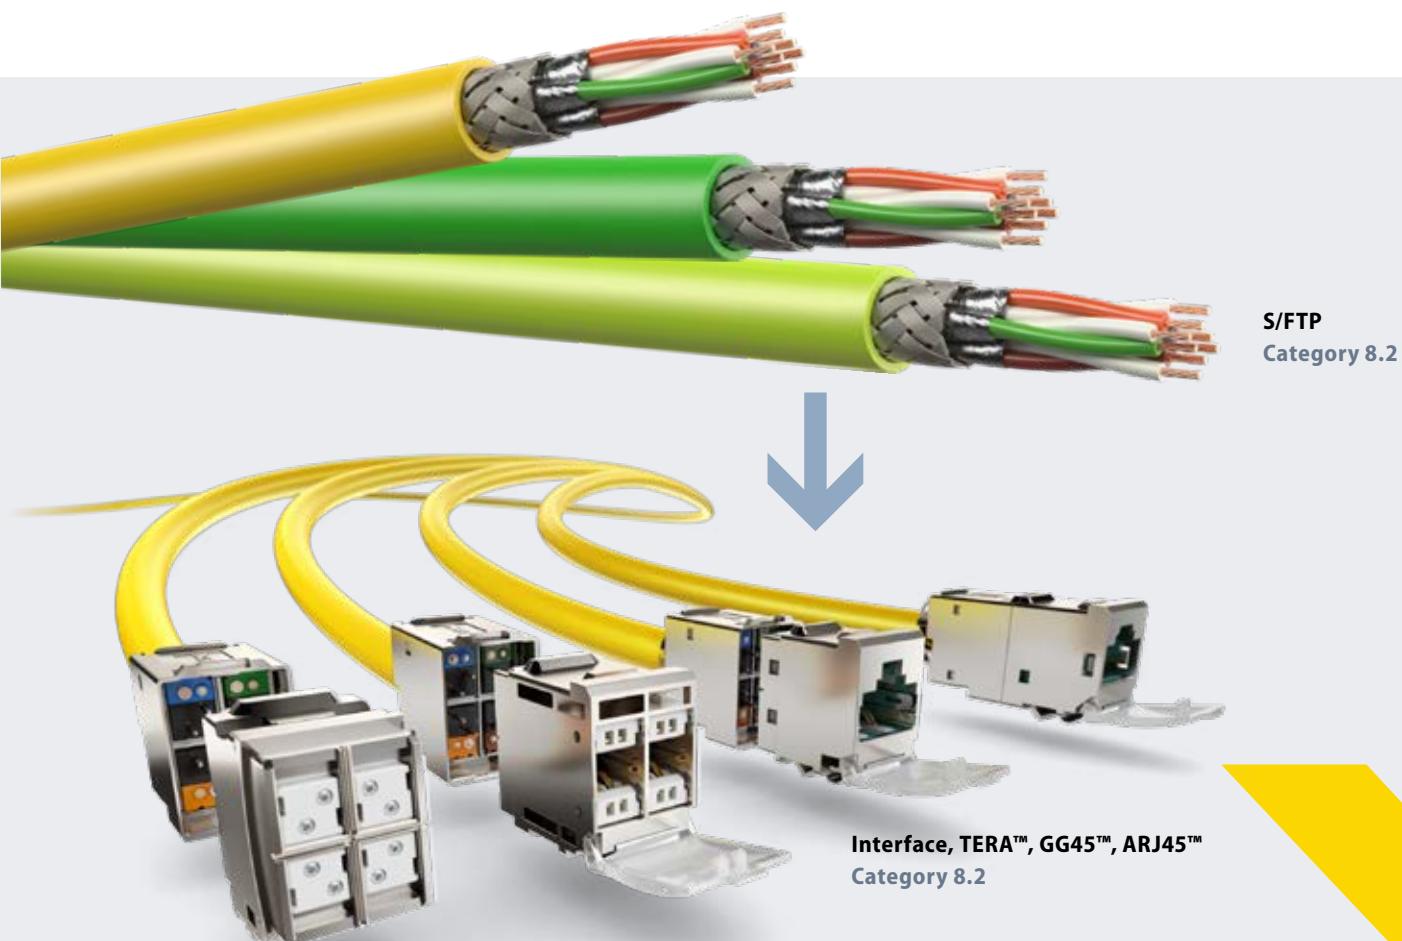

The requirements for the following transmission links in the data center are specified under the designation IEEE 802.3bq:

- EoR/MoR: Server switch links of up to 30 m with 2 connectors
- ToR: "Port to Port2 links using patch cords of 5 m to 10 m"

The reasons for the introduction of the new Ethernet standards mainly include the deficits of existing solutions according to IEEE 802.3ba for 40 GBit/s applications:

- Range limitation to 7 m with 8-pair CR4 Twinax cables (Top-of-Rack cabling)
- Reduced cost efficiency and migration capability with 8-fiber OM3 / OM4 FO cables (End-of-Row cabling)
- Poor economic efficiency of 2-fiber SM-FO cables (1310 CWDM / 1550 nm) up to 10 km / 2 km

Conclusion: Cat.8.2 – the solution for 40 GBASE-T

The Technical Report ISO/IEC 11801-99-1 (draft) recommends the following for the realisation of 40 Gbit/s over 4-pair cabling:

- Class I (based on Cat. 8.1 components)
- Class II (based on Cat. 8.2 components)

The technical superiority of Class II

(with Category 8.2 components) derives from the much higher reserves available with NEXT, PSNEXT, ACR-F and PSACR-F.

Additional advantages:

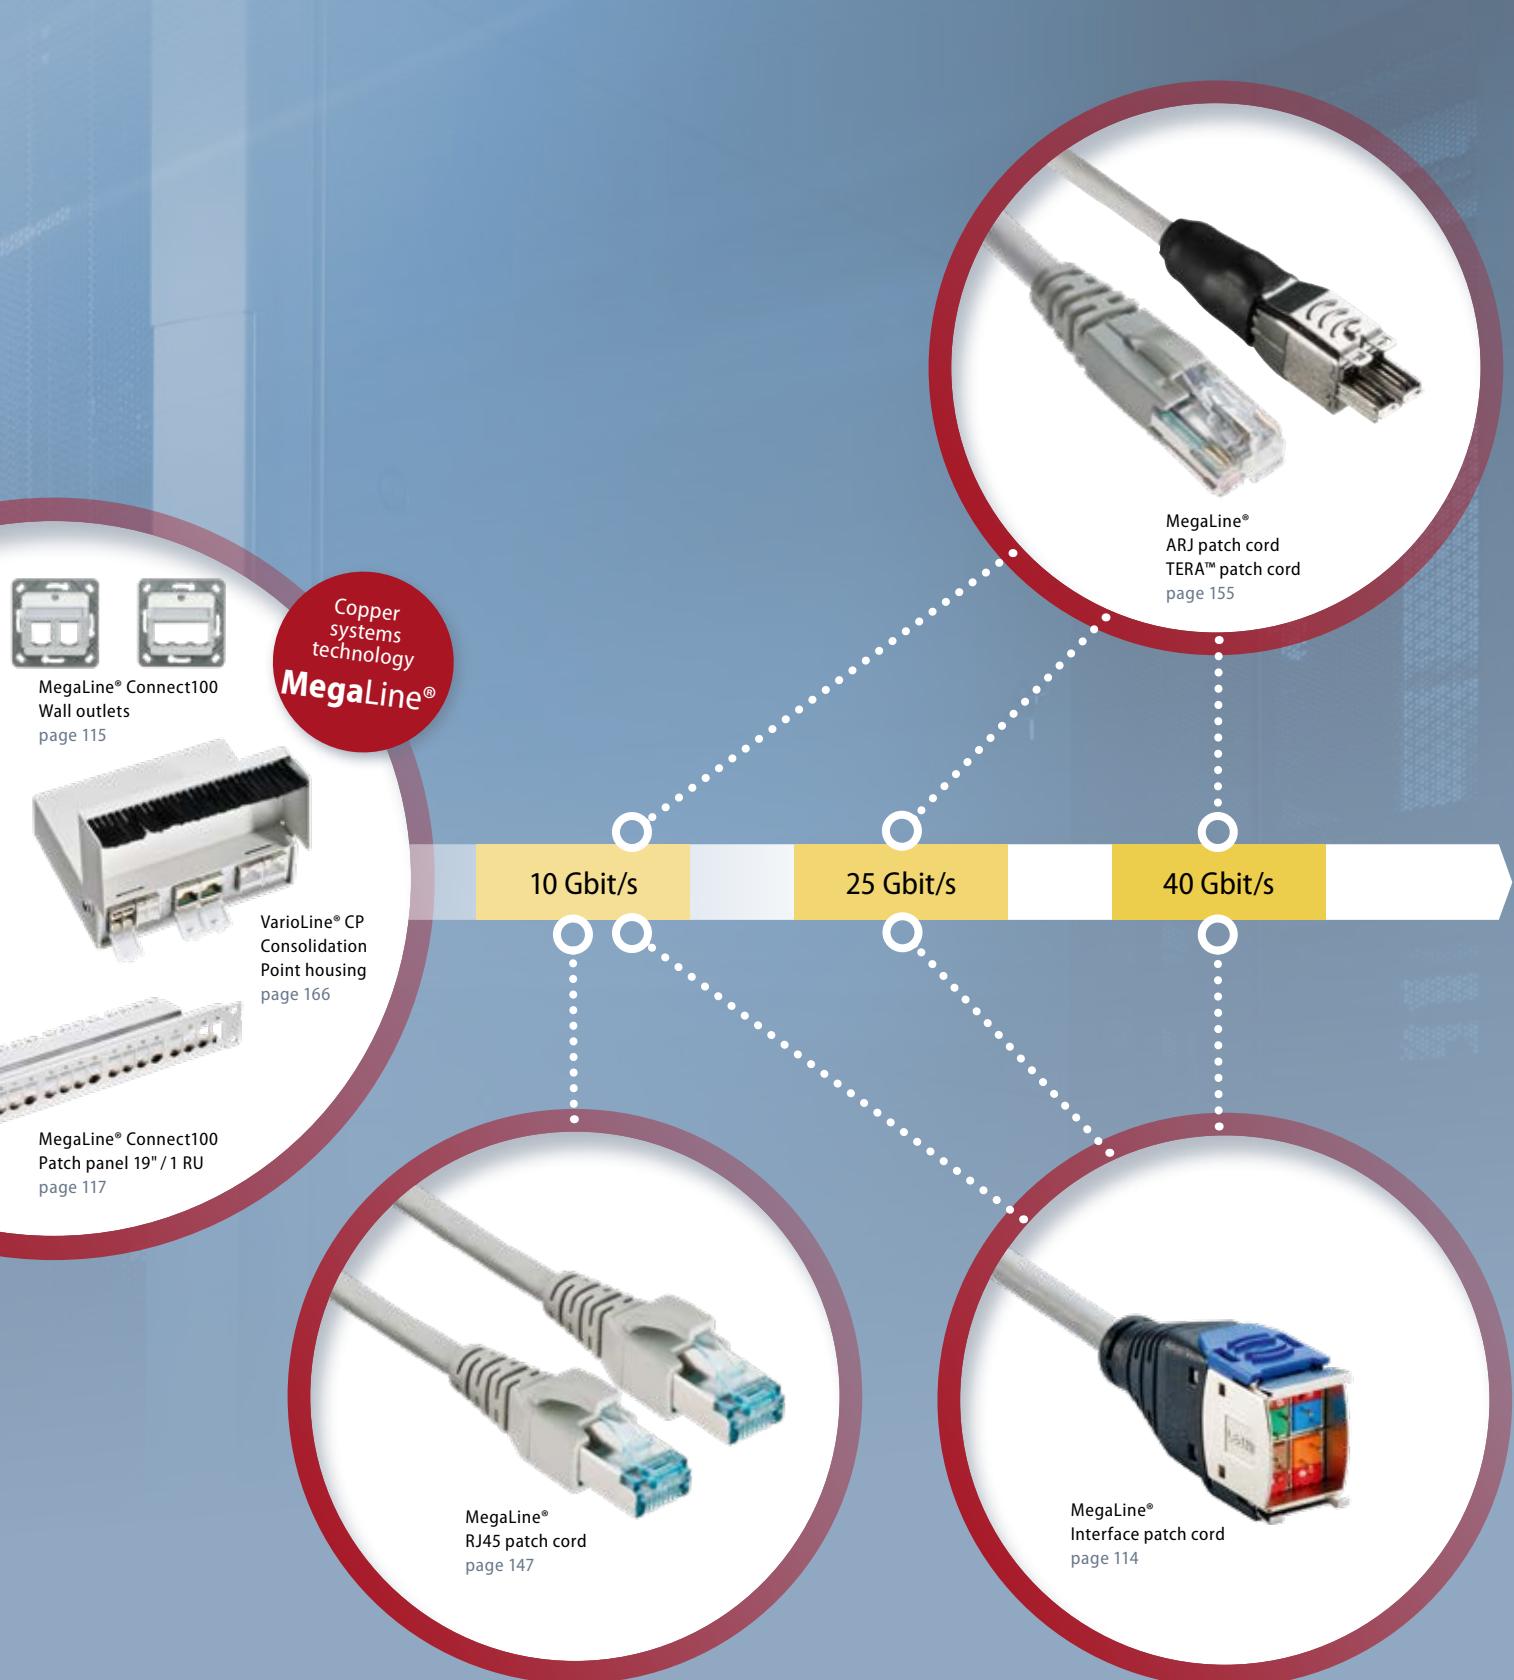

- Only components of Category 8.2 offer reserve compatibility with Cat. 7 and Cat.7_A
- Category "8.2" components offer reserves for further data increases

Class II cabling is the more cost-effective solution due to the lower design costs of the active technology (lower compensation expenditures). The cost of Cat. 8.1 or Cat. 8.2 cables is assumed to be being equal.

MegaLine® – the cabling system from 10 – 40 Gbit/s

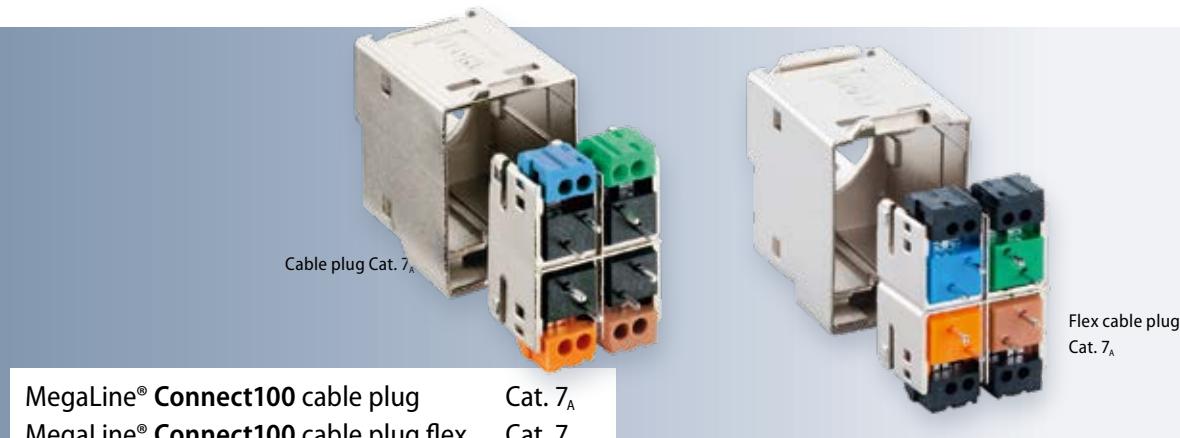

System overview

MegaLine® Connect100 cable plug

Category 7_A

Description

Interface for individually interchangeable MegaLine® Connect100 jack module. The cable plug enables generic transmission links far exceeding the requirements for Class F_A to be achieved. The mating face can also be identified later without any additional installation effort.

- Various mating faces available
- Simple and fast assembly

Construction

Material	PC; die-cast zinc, nickel-plated
Wiring	4 pairs via punchdown method
Strain relief	via cable ties
Shielding	extensive 360° shield connection
Electrical values	Class F _A /Category 7 _A / bis 2 GHz

Electrical characteristics

Contact resistance	≤ 20 Ω
Isolation resistance	≥ 500 MΩ between contacts
Proof voltage	≥ 1000 V DC/AC contact – contact ≥ 1500 V DC/AC contact – shielding
Max. current	1.25 A at 50° C

Standards

- ISO/IEC 11801
- EN 50173-1

MegaLine® Connect100 modular patch panel 19" / 1RU

for MegaLine® Connect100 jack modules

MegaLine® 24 EM patch panel

Description

Modular 3-part universal patch panel for 24 MegaLine® Connect100 ports. Modules can be hot-swapped.

Patch panel set

consisting of base carrier, cable socket carrier, stainless steel front panel

Base support

- for holding a cable socket carrier
- is installed in advance in the cabinet or rack

Labelling

Using labelling strip made of aluminium, self-adhesive (must be ordered separately, see table)

Cable socket carrier

- Unit of cable plugs
- Mounted outside the cabinet and/or base carrier
- is inserted into the base carrier on the rear side
- Fastening by means of slide lock
- Potential equalisation with two threaded bolts M5 and/or two earth lugs

Stainless steel front cover (depending on version)

Cut-outs for 24 MegaLine® Connect100 jack modules

Construction

Strain relief	via cable ties
Earthing	see page 119
Cable entrance	over the entire width of the cable management rail
Dimension	44 mm x 483 mm x 163 mm (H x B x D)

Accessory (has to be ordered in addition)

MegaLine® Connect45 – the modular connection technology

Connection technology can be this simple

The basic kit >

MegaLine® data cable Cat. 6_A + Cable plug

Supplementation is by simply adding on the desired connection component

Very short assembly time . Outstanding electrical performance . Future-proof and all this with maximum flexibility.

Connection components >

Simply add on – finished!

Jack module
Cat. 6_A (page 131)

RJ45 plug
Cat. 6_A (page 133)

LinkExtender
(page 132)

Benefits »

› Assembly without additional cable ties

› High level of safety

Visual check by means of a transparent cable plug

› Components with LEO function

› LED patch cord

› Power over Ethernet (PoE)

› Different formats for maximum packing density

The cable plug – the system basis

RJ45 jack modules of Category 6_A (IEC 60603-7-51) are used here. The new Keystone® jack module has been modified in such a way that it is not necessary to attach a separate cable tie. The transparent cable plug facilitates cable pre-fabrication, thereby allowing visual check of the correct colour assignment of the individual wire pairs.

Using the appropriate stripper it is possible to crimp the cores in the IDC insulation displacement connectors and also remove excess cores so they are flush – this is how to ensure the correct connection!

Ultra-simple installation – crimp and trim wires in a single work step

LEO and LED function

The "pathfinder features"

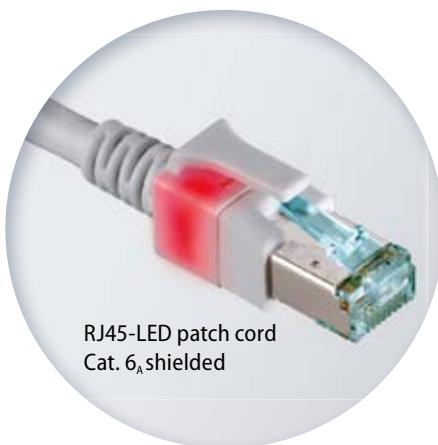

The jack modules are optionally available with LEO functionality

➤ **LEO = Light Emitting Outlet**

With the aid of a transmitter connected to one end of an installed link, the opposite end can be easily identified by means of a red LED display contained within the jack module. This feature is particularly useful in environments with a high packing density, enabling the corresponding modules to be located quickly and reliably. The module is easy to open using the unlocking tool.

With a single click, it is thus possible to expand the existing cabling system by adding on a new module, e.g. the LEO function.

RJ45-LED patch cord
Cat. 6_A shielded

RJ45 patch cord with LED function

Category 6 or Category 6_A patch cords complete the cabling link.

In complex patch environments inside wiring cabinets, you also have a clear overview of the patch cord sides that belong together thanks to the integrated red LEDs.

The connector can either be lit up permanently or flash at two different frequencies.

Connection components

RJ45 plug and LinkExtender

RJ45 plug (Category 6_A)

Using the RJ45 plug, it is possible to use the same MegaLine® Connect45 cable plug very simply to realise Consolidation Point applications or also PoE applications (Power over Ethernet), e.g. connect IP cameras or access points.

In so doing, the existing requirements of IEEE802.3 af/at are supported (15W/25W) as well as future applications up to 100 W. The RJ45 plug can be used in conjunction with both horizontal and flex cables. When using PoE end devices such as access points, components such as additional wall boxes and patch cords are no longer required. The connection is made directly via the data cable.

LinkExtender

The LinkExtender allows you to extend existing Class E_A cabling links quickly and efficiently without loss of performance.

Use the unlocking tool to open the existing jack module, replace it with a LinkExtender and insert a pre-fabricated additional cabling link in the required length – the job is done!

The LinkExtender can be used for easy extension of Class E_A cabling links >

Extend existing cable connections ...

... by opening the jack module with the unlocking tool ...

... and remove the jack module from the cable plug.

Instead of the jack module, add on the LinkExtender ...

... and extending accordingly on the second side.

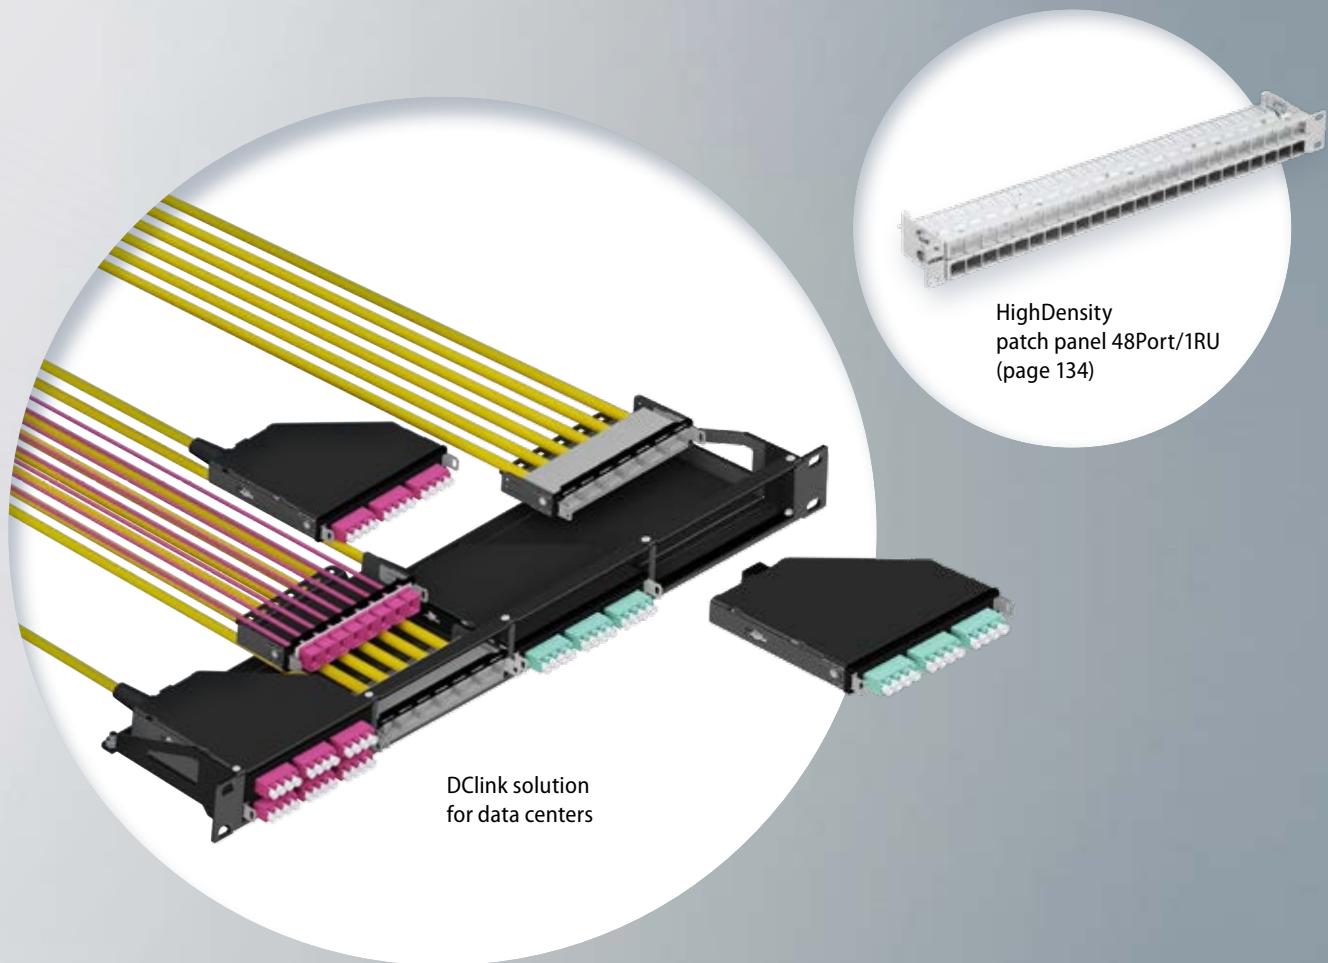

Finally, use two cable ties to securely close the covers.

Installation options

DClick – the real Plug&Play solution

There are a wide range of installation options available for the jack modules. These range from design-capable wall outlets and Consolidation Point housings (also for DIN rail assembly) through to underfloor solutions and various patch panels.

In combination with the MegaLine® Connect45 module (in ELine format) it is possible to realise high-density solutions of up to 48 ports on one rack unit.

When using DClick, the universal LEONI solution for data centers, copper can be flexibly combined with FO inside a rack unit, too.

Summary

No matter how your network is structured, you now have the full range of options available to you.

MegaLine® Connect45 – the cabling system from 1 – 10 Gbit/s when it comes down to very short installation times, maximum flexibility and maximum performance.

MegaLine® Connect45 cable plug

AWG24-22 / AWG27-26

Fig. 1
Cable plug AWG24-22

MegaLine® Connect45-cable plug AWG24-22 MegaLine® Connect45-cable plug AWG27-26

Description

The MegaLine® Connect45 cable plug has a cutting/clamping connection and is crimped together with the installation cable. It is the interface to the individually interchangeable MegaLine® Connect45 jack module.

This means that generic transmission links far exceeding the requirements for Class E_A can be achieved, depending on the relevant jack module.

The jack module can also be changed retroactively without any additional installation effort.

- Simple and fast assembly

Construction

Material	Plastic
Wiring	4-pairs via IDC contacts according to EIA/TIA 568A/B
Core type	AWG 24 – 22 solid and flex or AWG 27 – 26 solid and flex

Accessories

see page 118, 138

MegaLine® Connect45 RJ45 plug

Category 6_A

MegaLine® Connect45 Cat. 6_A

Description

By using the same MegaLine® Connect45 cable plug, it is possible to implement Consolidation Point and/or PoE applications very simply with the help of the RJ45 plug. Depending on the cable plug used, a horizontal or flex cable can be selected.

The transmission properties are those of Class E_A according to ISO/IEC 11801/EN 50173-1. 10 GbE is supported.

Construction

Material	Full metal; die-cast zinc, nickel-plated
Wiring	4 pairs via cable plug
Connection	RJ45 plug

Mechanical characteristics

Insertion cycles	≥ 750 (on RJ45 side)
Contact area	50 µ gold plating
Contacts	AWG 26/-22
Note	Crimping only using the MC45 assembly tool (see page 138) Cable plug has to be ordered separately (page 128)
Cable diameter	5 – 9 mm

Environmental requirement

Connection class	IP20
Temperature range	-40 °C to +70 °C

Electrical characteristics

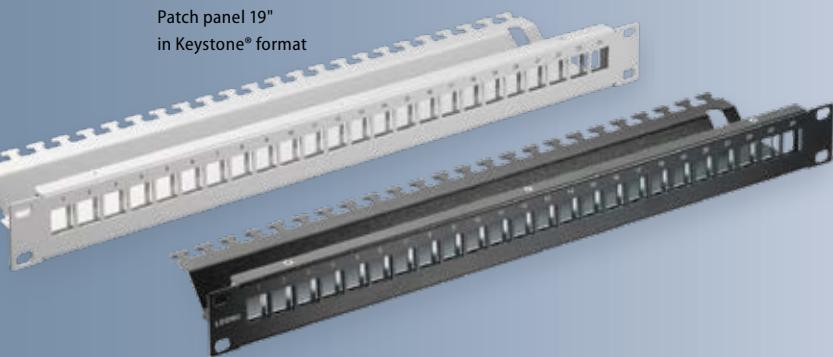

Suitable for PoE+ according to IEEE802.3at

MegaLine® patch cord RJ45/RJ45 Cat. 5 / 100 MHz

shielded, Cat. 5, Class D, with coloured moulded boots

MegaLine® Patch 5D-RJ45

Description

The cable type used is suitable for transmission rates of up to 100 MHz. The pair shielding and the high-coverage copper braiding as overall shielding ensure excellent NEXT and impedance values.

The patch and connection cables are fitted at both ends with a shielded RJ45 plug and an overmoulded boot.

Applications

IEEE 802.3, 10Base-T, 100Base-T, 1000Base-T, IEEE 802.5 16MB
ISDN, FDDI, ATM

Properties / type

EMC	Foil overall shielding
RJ45 plug	EN 60603-7
Electrical values	Cat. 5, Class D
Assignment	1:1
Standards	ISO/IEC 11801 / EN50173 RoHS compliant with 2011/65/EU

Fire behaviour

Flame retardancy IEC 60332-1-2

Accessories

MegaLine® patch cord RJ45/RJ45 Cat. 6 / 250 MHz

unshielded, Cat. 6, Class E, with coloured moulded boots

MegaLine® Patch 6E-RJ45U

Description

The cable type used is suitable for transmission rates of up to 250 MHz. Due to its construction, the patch cord offers outstanding NEXT and XT return losses.

The patch and connection cables are fitted at both ends with a shielded RJ45 plug and an overmoulded boot.

Applications

IEEE 802.3, 10Base-T, 100Base-T, 1000Base-T, IEEE 802.5 16MB, ISDN, FDDI, ATM

Properties / construction

RJ45 plug	EN 60603-7
Electrical values	Cat. 6, Class E
Assignment	1:1
Standards	ISO/IEC 11801/ EN50173 RoHS compliant with 2011/65/EU

MegaLine® patch cord RJ45/RJ45 Cat. 6 / 250 MHz

shielded, Cat. 6, Class E_A, with LED light signal in plug

MegaLine® Patch LED 6EA-RJ45

Description

Especially for use in offices, industrial plants and data centers. The plug contains one red LED. The light signal is activated using a detector that is placed on a contact pair on the rear of the plug.

Three different signal types can be selected by repeatedly pressing the detector button:

→ continuous light / slow flashing / fast flashing

The other end of the LED patch cord reacts with the identical light signal in order to make it identifiable.

Applications

For use in structured cabling according to ISO/IEC 11801 and EN 50173-x. Ideal for all applications up to Class E_A (video, data, telephony)

>10 GbE acc. to IEEE 802.3 an, cable sharing, VoIP, PoE

MegaLine® industrial patch cord RJ45/RJ45 Cat. 5 / 100 MHz

shielded, Cat. 5, Class D, with yellow moulded boots

MegaLine® Patch Industry 5D-RJ45

Description

The cable type used is suitable for transmission rates of up to 100 MHz. The pair shielding and the high-coverage copper braiding as overall shielding ensure excellent NEXT and return loss values.

The patch and connection cables are fitted at both ends with a shielded RJ45 plug and boot.

The "superflex" version is excellent for demanding industrial applications (e.g. drag chains).

Applications

Suitable for IEEE 802.3, 10Base-T, 100Base-T, 1000Base-T, 10GBase-T, IEEE 802.5 16MB, ISDN, FDDI, ATM

Properties / construction

EMC	Shield (braid)
RJ45 plug	EN 60603-7
Electrical values	Cat. 5, Class D
Cable/boot	Yellow (PUR superflex) / yellow
Standards	ISO/IEC 11801 / EN50173
	RoHS compliant with 2011/65/EU

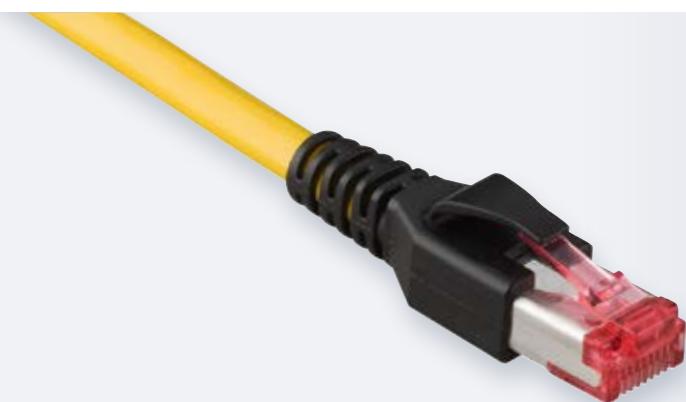

Fire behaviour

Smoke density	IEC 61034-1/2
Halogen-free	IEC 60754-1/2
Flame retardancy	IEC 60332-2-2

MegaLine® industrial patch cord RJ45/RJ45 Cat. 6 / 250 MHz

shielded, Cat. 6, Class E_A, with black boots

MegaLine® Patch Industry 6EA-RJ45

Description

The cable type used is suitable for transmission frequencies of up to 250 MHz. The pair shielding and the high-coverage copper braiding as overall shielding ensure excellent NEXT and return loss values.

The patch and connection cables are fitted at both ends with a shielded RJ45 plug.

Applications

Suitable for IEEE 802.3, 10Base-T, 100Base-T, 1000Base-T, 10GBase-T, IEEE 802.5 16MB, ISDN, FDDI, ATM

Properties / construction

EMC	Combined shielding (PiMF + braid)
RJ45 plug	EN 60603-7
Electrical values	Cat. 6, Class E _A
Cable/boot	yellow (PUR) / black
Standards	ISO/IEC 11801 / EN50173 RoHS compliant with 2011/65/EU

MegaLine® Connect100 trunk cable

pre-assembled trunk, MegaLine® Connect100 Cable plug Cat. 7_A

MegaLine® Connect100 trunk cable, Cat.7_A

Description

The trunk cable is based on a G20 S/F data cable – pre-assembled at both ends with Cat 7_A MegaLine® Connect100 cable plugs .

Thanks to its high quality components, the pre-assembled cable meets the requirements for the Permanent Link (**typ. > 5 m, Cat. 7_A modules**) of Class F_A according to ISO/IEC 11801 and EN 50173 for 10 Gigabit Ethernet and the channel (Class II) according to the current draft of ISO/IEC 11801-99-1.

Channel Class II

- Recommended minimum configuration:
5 m horizontal cable and 2 m patch cord each
- Maximum configuration:
26 m horizontal cable and 2 m patch cord each at both ends

Construction

Cable	G20 S/F (4x2x AWG 22/1)
	(Order no.: LKD 7KS8 0020 0000)
Side A / side B	MegaLine® Connect100 cable plug Cat. 7 _A

VarioLine® CP Consolidation Point programme

for copper and FO connectivity

The Consolidation Point programme is an efficient and low-cost solution for highly flexible storey, data center or industrial cabling.

In office cabling (EN 50173-2), Consolidation Points (CP) offer highly flexible cabling solutions for fast-changing office facilities as a collection point between the floor distributor (FD) and the telecommunication outlet (TO).

The CP can be installed in a double floor, false ceiling, column or duct. From there, flexible lines (CP cables) lead to the data sockets at the workplace.

CP cabling links permanently installed cables to modular or mobile office systems such as partition walls or office furniture in which the TO is already installed. In industrial cabling, this is referred to as an intermediate distributor (ID) – a connection between the floor distributor (FD) and the telecommunication outlet (TO) that allows temporary machine cabling, for example (EN 50173-3).

In a data center, CPs offer an additional marshalling option (EN 50173-5) as local distribution points (LDP) between the zone distributor (ZD) and the equipment outlet (EO).

The robust VarioLine® Consolidation Points are made of galvanised sheet metal and are available in various sizes.

Various module panels are available for VarioLine® CP housings:

- MegaLine® Connect100
- MegaLine® Connect45 (Keystone® and VK format)
- MegaLine® Connect45 Pro
- GigaLine® SC Duplex

On request we can expand the product programme quickly and flexibly to include additional modular panels – for modular use with copper and FO systems.

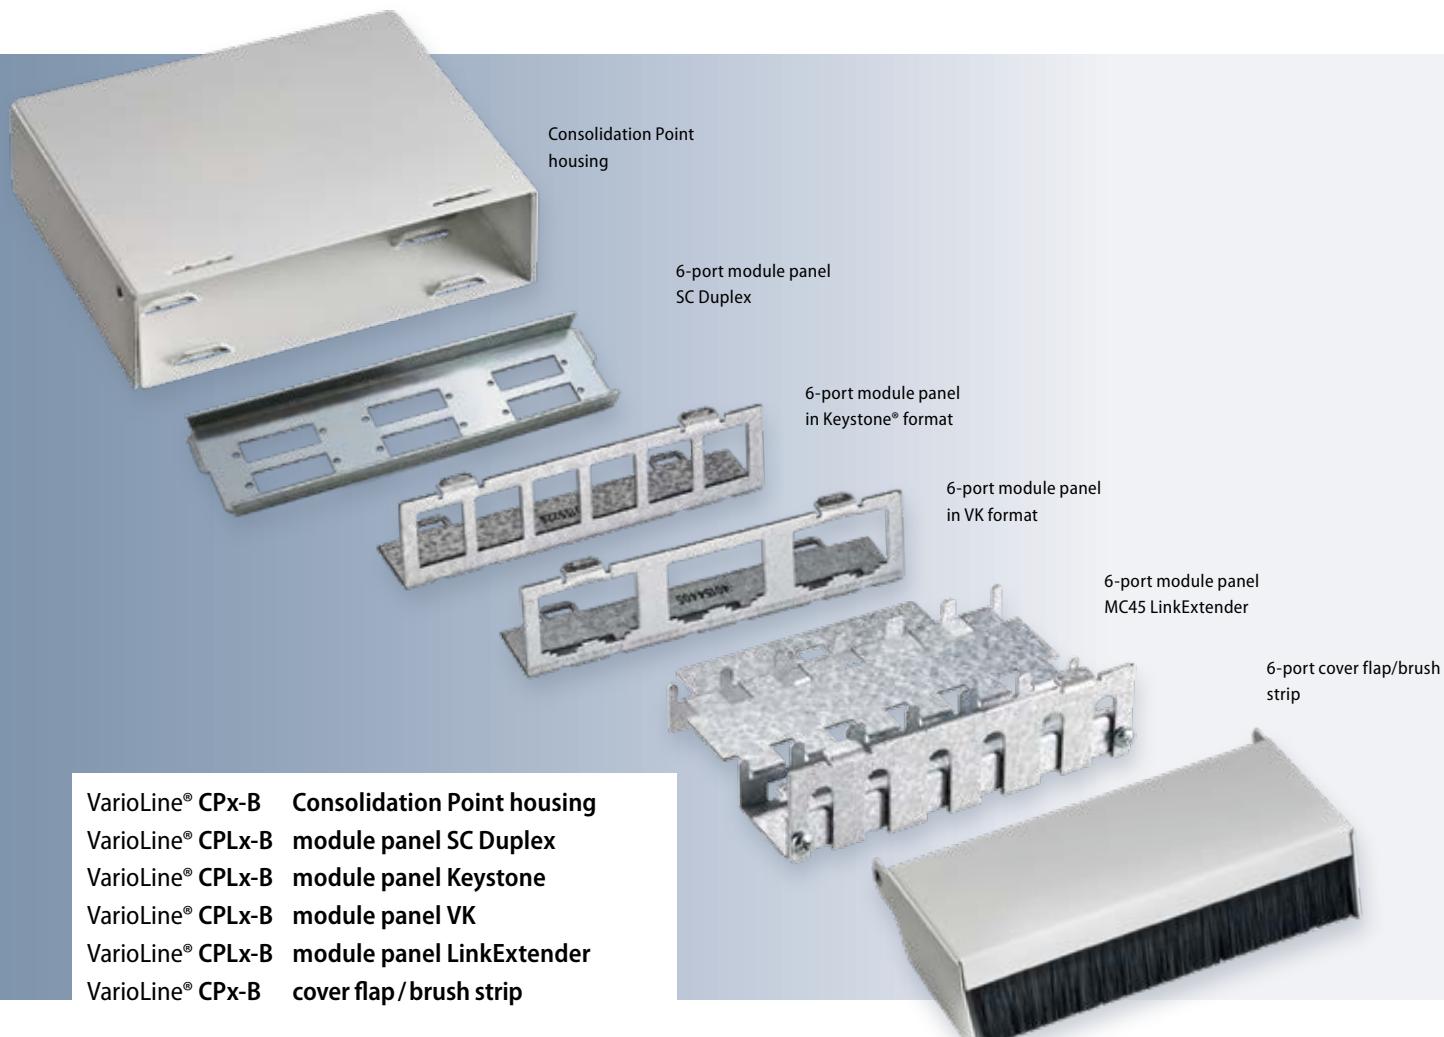

What VarioLine® CP has to offer:

- The patch end is protected by means of a pivoting cover with a brush strip (optional).
- Support for incoming cables and patch cords can be provided by means of cable ties.
- The housings can be earthed if necessary.
- The DIN rail clip included with the housing extends the range of potential uses with rail clips.

VarioLine® Consolidation Point housing

with DIN rail clip

Description

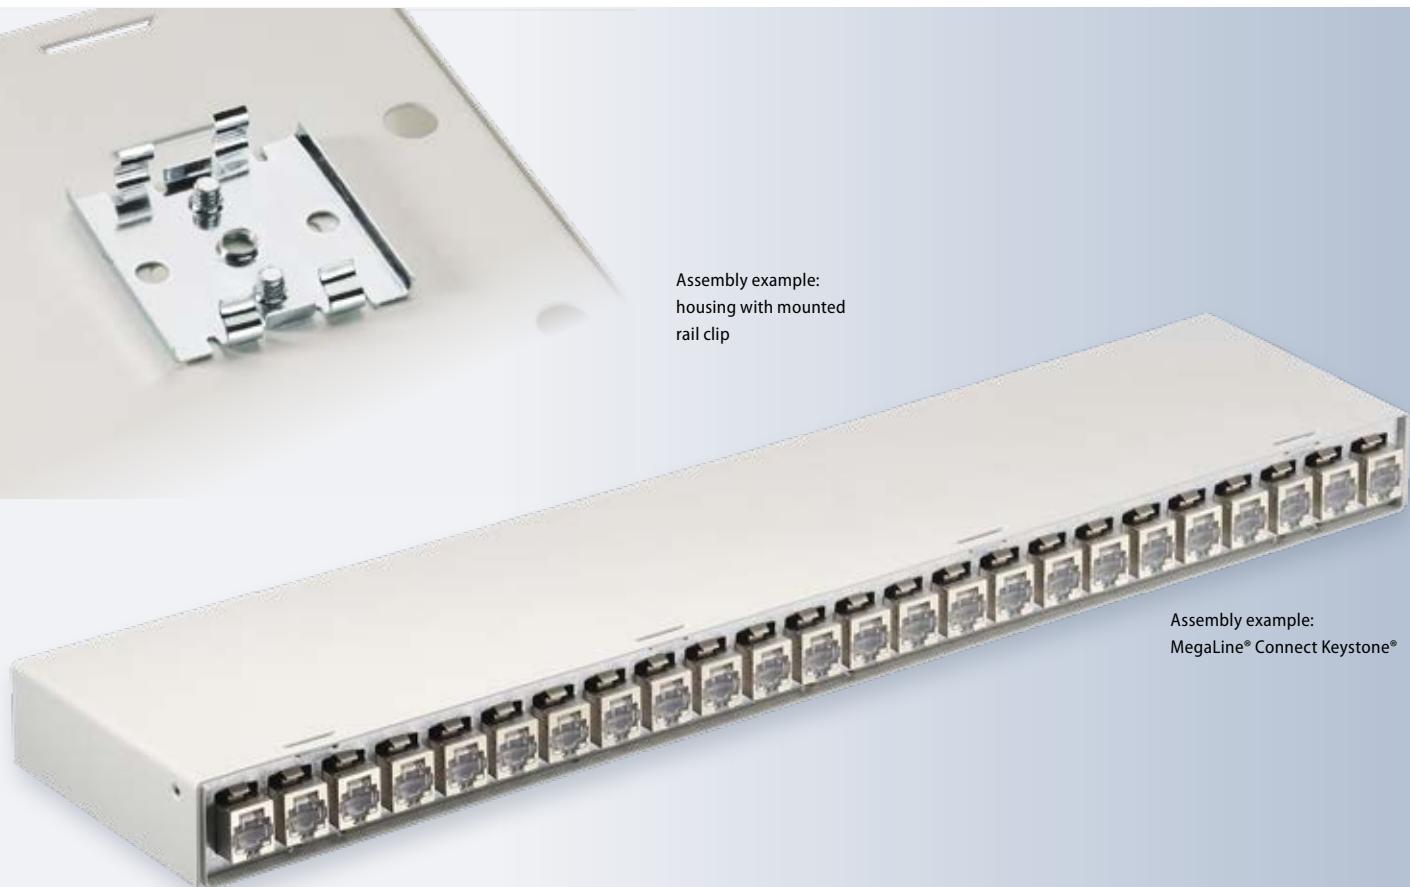

For installation in a double floor or false ceiling. CP housing with strain relief by means of cable ties (not included). Can be fitted with MegaLine® Connect45 or MegaLine® Connect100 modules.

A cover flap with integrated brush strip can be optionally inserted on the patch side.

- Modular (exchangeable module panel)
- optionally with 6 / 12 or 24 ports
- rugged casing made of galvanised sheet metal
- free of hazardous substances

Installation

- CP housing is attached by rail clip (matching clip included)
- Alternative attachment using screws or impact dowels (not included)
- Module panel is attached by snapping into housing
- Modules are attached by snapping into the module panel

VarioLine® UF – underfloor systems

Support plate solution – modular & universal

The VarioLine® UF underfloor systems (floor outlet solutions) offer an efficient and low-cost solution for completing copper and FO systems.

They provide a high degree of flexibility in offices. Workplaces can be connected to the energy and IT grid without the usual cable tangle. The modular and universal support plate solutions are available for all commonly available underfloor systems (e.g. Ackermann or Electraplan).

The support plate replaces the device carrier, so it provides maximum space for cable feed. The slanted feed and exit ensures secure ducting even in very low intermediate floors.

The use of adapter plates allows low-cost, efficient installation of the entire range of LEONI connection technology in both copper and FO technology.

Example of an underfloor solution
by LEONI in an OBO Bettermann floor outlet

Acceptance measurement

of MegaLine® cabling systems

The acceptance measurement for the MegaLine® cabling systems for the channel or permanent link is carried out in accordance with the requirements of ISO/IEC 11801 or EN 50173, (3rd Edition).

Further standards regarding the acceptance measurement (measurement procedure): **DIN EN 50346** and **DIN EN 61935**.

Acceptance measurement Class E

MegaLine® Connect100 / MegaLine® Connect45

For acceptance measurement according to Class E, the measuring device is set to a measuring bandwidth of 250 MHz.

For details, refer to the instructions on setting the measuring device. Information can be found under:

- › www.idealindustries.de
- › www.flukenetworks.com
- › www.itnetworks.softing.com

Ensure the measuring adapters are connected to the measuring device and securely engaged. Take the corresponding measuring cable and ensure it is firmly plugged in. If synchronisation is required, this is then carried out according to the instructions for the device.

Standard acceptance: Channel or Permanent Link	
System	 MegaLine® Connect45
Approved measuring devices	 LanTEK III-1000 (available from Ideal Industries) Fluke DSX 8000 (available from Fluke Networks)
Approved measuring cables	 Measuring cable set Order no. LKD 9AW3 0023 0000

Acceptance measurement Class E_A

MegaLine® Connect100 / MegaLine® Connect45

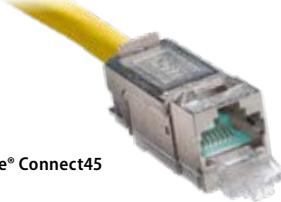

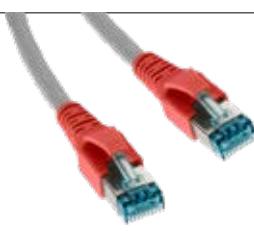

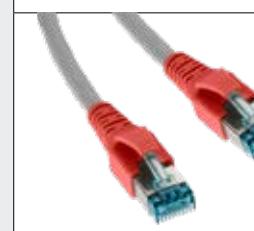

For acceptance measurement according to Class E_A, the measuring device is set to a measuring bandwidth of 500 MHz.

For details, refer to the instructions on setting the measuring device. Information can be found under:

- › www.idealindustries.de
- › www.flukenetworks.com
- › www.itnetworks.softing.com

Ensure the measuring adapters are connected to the measuring device and securely engaged. Take the corresponding measuring cable and ensure it is firmly plugged in. If synchronisation is required, this is then carried out according to the instructions for the device.

Standard acceptance: Channel or Permanent Link

System	 MegaLine® Connect100 jack module RJ45	 MegaLine® Connect45
Approved measuring devices	 LanTEK III-1000 (available from Ideal Industries)	 LanTEK III-1000 (available from Ideal Industries)

* = 3-connector link from three providers

Alien crosstalk

Alien crosstalk describes the undesirable mutual electrical influence between parallel links in the installation duct and in the vicinity of the patch panels. In contrast to NEXT and attenuation, disturbance through alien crosstalk cannot be compensated for electronically.

Alien crosstalk has become extremely important from a technical point of view. The ISO/IEC 11801 Amendment 1 (Generic cabling for customer premises) takes this into account with relevant specifications for the new transmission Classes E_A (500 MHz) and F_A (1000 MHz).

MegaLine® S/FTP cabling systems meet the requirements for alien crosstalk with a high degree of reliability. External influences from adjacent channels are prevented and suppressed simultaneously via the double shielding of the S/FTP cables and the modular shielding of the connectivity.

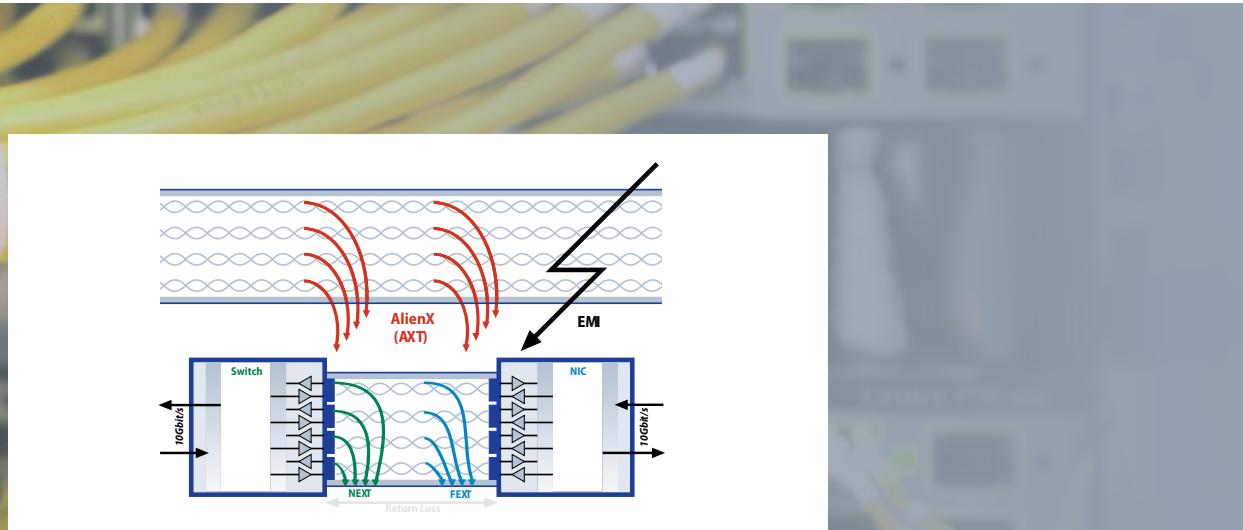

Alien crosstalk is attenuated by >100 dB (a factor of 100,000). These characteristics are design-specific and do not change in the installation environment. IEEE 802.3an considers shielded cabling systems to be the preferred solution.

Frequency MHz	Minimum PS ANEXT dB	
	Class E _A , F	Class F _A
1	67.0	67.0
100	60.0	67.0
250	54.0	67.0
500	49.5	64.5
1000	N/A	60.0

Requirements of PS Alien Next and PS AACR-F at selected frequencies

Frequency MHz	Minimum PS AACR-F dB	
	Class E _A , F	Class F _A
1	67.0	67.0
100	37.0	52.0
250	29.0	44.0
500	23.0	38.0
1000	N/A	32.0

Requirements of PS Alien Next and PS AACR-F at selected frequencies

Transmission model and alien crosstalk 10GBASE-T

Coupling attenuation

Coupling attenuation evaluates the overall EMC behaviour of a cable or individual link. The coupling attenuation consists of the shielding attenuation and the asymmetrical attenuation taken together and defines the degree of reduction of electrical influences on a signal path.

If the coupling attenuation for Class E_A and F transmission links is 10.0 dB better than in the table below and for Class F_A transmission links 25.0 dB better than in the table below, the values for the parameters Power Sum Alien NEXT (PS ANEXT) and Power Sum Alien ACR-F (PS AACR-F) are complied with automatically as a result of the design, making it unnecessary to demonstrate them explicitly.

Class	Frequency MHz	Min. coupling attenuation dB
D, E, E _A , F, F _A	$30 \leq f \leq$ Note 2	$80 - 20\lg(f)$

Note 1: Round down calculated values greater than 40 dB to 40 dB.

Note 2: Coupling attenuation is measured up to 1000 MHz but the limit is determined by the upper frequency of the class being tested.

Requirements of coupling attenuation for cabling classes D to F_A

Coupling attenuation for Class E_A and F:

> 90 – 20 log(f), > 50 dB up to 100 MHz

Coupling attenuation for Class F_A:

> 105 – 20 log(f), > 65 dB up to 100 MHz

Due to the coupling mechanisms, this connection only applies for shielded cablings and not for unshielded ones.

MegaLine® measuring results

All MegaLine® cabling systems with modular or individual shielding have met the extended requirements for coupling attenuation according to Class E_A. It was possible to conclude the comprehensive assessments with the relevant certifications.

MegaLine® measuring results

All MegaLine® cabling systems with modular or individual shielding have met the extended requirements for coupling attenuation according to Class E_A. VK 4K7 even meets the requirements of Class F_A. It was possible to conclude the comprehensive assessments with the relevant certifications.

MegaLine® @home

One network – no limits

MegaLine®@home – all data in one

Go for the convenient home option – one data network for an entire lifetime

In the near future, we will be able to manage and use our entire home environment using just a few screens such as TVs, smartphones or tablets. This will enable increasingly universal use of applications such as TV viewing, games, streaming and storage, as well as facilitating the control of electrical appliances, lighting, HVAC and security.

With rates of up to 10 Gbit/s, data will be available in the blink of an eye from any wall socket. Films, images and music will take just a few moments to download, and surfing the internet will become a truly new experience.

LEONI provides the necessary neutral data network in the form of MegaLine®@home. Just like an electricity supply, any data socket will be able to power any application. With the right modules installed, it will be possible to control building automation systems and hard drive recorders while on the go. Integrating the domestic wireless LAN network is extremely straightforward, too.

Convenience, entertainment, building automation and security are high-priority factors for MegaLine@home, and it is also able to accommodate your own personal creativity.

Basic components

MegaLine® Box:

The MegaLine® Box is the control centre for your network. All components can be neatly installed and are protected from unauthorised access. All household applications are distributed and controlled from here. It is available in a range of colours and can be integrated in furniture units (min. 55 cm interior depth).

MegaLine® home 600

The data cable MegaLine® home 600 forms the backbone of the network, transmitting data to the wall outlets at a rate of 10 Gbit/s. This means the network is perfectly prepared for a long service life. Related products even offer the option of providing the power supply for end devices and setting up an outdoor connection.

MegaLine® Connect

The jacks and plugs of the MegaLine® Connect series are the interfaces between cable and wall outlet, ensuring that all applications can make the most of the high data speeds.

MegaLine® Patch

The patch cords and connection cables of the MegaLine® Patch series are used to distribute all applications in the MegaLine® Box to the various connections and hook up the end devices to the wall outlets. This are the final link in the transmission chain.

Convenience components

Components:

Active devices are required to turn LEONI's basic network into a true multimedia network.

The retail sector provides an extensive range of products for this purpose, leaving nothing to be desired.

- Telephone system and wireless LAN router
- Switch
- IP video cameras
- BUS system
- Repeater
- Satellite system
- Sensors and actuators
- End devices
- Installation material

Convenience for all

A data network is the basis for distributing all data within the household,

Providing easy access to centrally stored data such as photos, films and music and making it easier than ever to control heat, lighting and alarm systems.

Connection to the internet is no problem either of course, so everyone to get the full fun out of surfing and gaming for example, or streaming films and photographs.

Communication

Fast surfing and phone calls are becoming increasingly integrated. The MegaLine®@home data network is ready and waiting for upgrades and already offers data rates of 10 Gbit/s.

- Voice over IP
- Telephone, fax, scanner, Smartphone, tablet
- PC, laptop

Entertainment

Watching TV, gaming, surfing, listening to music, looking at photographs or streaming – everything is available all the time, wherever you want. The neutral network structures even allow the various applications to be exchanged. MegaLine®@home interconnects all devices, turning the TV into a slide projector or a hi-fi system, for example ...

- TV, TV over IP, photographs
- Gaming consoles
- Music, radio
- PC, surfing, tablets
- Power over Ethernet (PoE)

Building automation

Forgotten to switch the light off? Is the cooker still on? No worries! The interface to the in-house BUS system allows all devices to be operated conveniently even when you're out and about.

- Heat, light, shading
- Household appliances
- Occupancy and smoke detector
- Renewable energies, garden irrigation

Safety

Whether outdoor surveillance, occupancy detector or alarm control: MegaLine® @home makes it all possible, and provides the connection so you can check the current state of your home at any time.

- Network safety
- Alarm systems
- Surveillance cameras
- Access control and safety

Building technology and multimedia

LEONI & Partner

Industry-wide competence from a single source

Specialist electricians, specialist wholesalers and LEONI – an unbeatable combination.

The combination of specialist fitter, wholesaler and manufacturer gives you a wide range of options in terms of product diversity, fast availability and outstanding specialist expertise – at every level.

With MegaLine®@home, LEONI provides the basis for your home network, not just with high-quality products but also the experience gathered from more than 20 years of network system technology of the very highest quality. The individual products are manufactured in Germany to top industrial and environmental standards and exceed all current data technology requirements.

Specialist expertise

LEONI

- German manufacturer of professional data networks
- Outstanding expertise relating to data transmission products
- The very highest product quality for future-oriented reliability

Specialist wholesaler

- Expertise and consultation on active components and solutions
- Integrated concept for home solutions – covering everything from power and light to data
- High-speed availability

Specialist electricians

- Trained personnel for on-site data network set-up
- Custom solutions available
- Peace of mind due to superlative product quality and tested compatibility

Office

Field of application

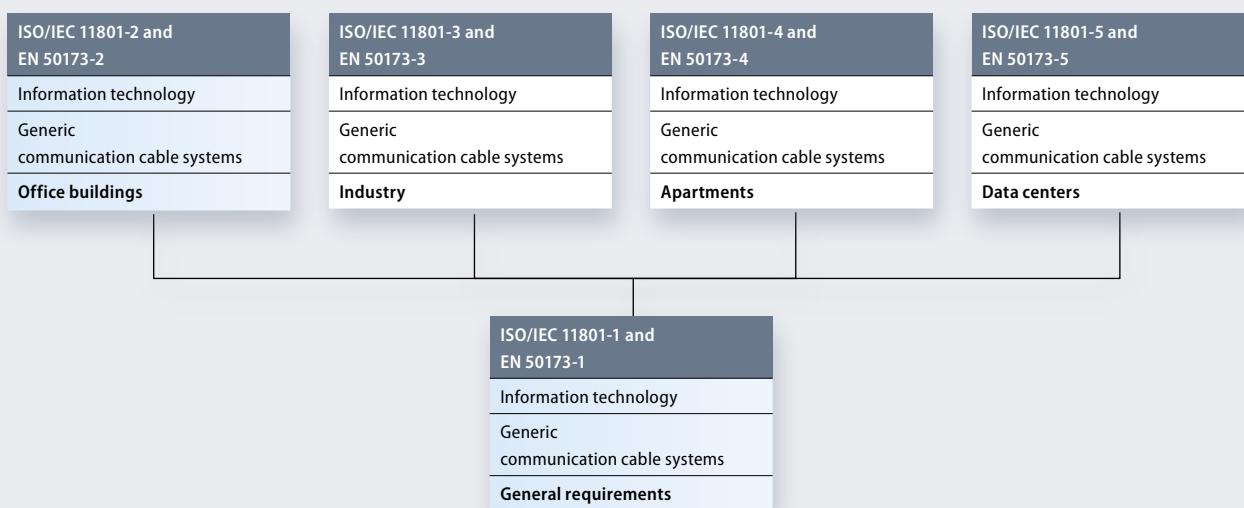

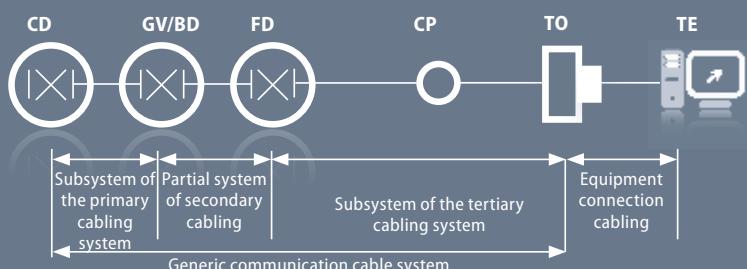

Generic cabling in office buildings

The complete cable system – from distribution equipment to workstation

Structure of a generic communication cable system ISO/IEC 11801 and DIN EN 50173-1/2

CD	Campus distributor
BD	Building distributor
FD	Floor distributor
CP	Consolidation Point
TO	Telecommunications outlet
TE	Terminal equipment

A company's future success is now heavily dependent on having a reliable and modern data processing infrastructure.

The rapid development of data bit rates and the wide range of applications require a very flexible, high-performance network infrastructure that will be able to meet the demands for the next ten years.

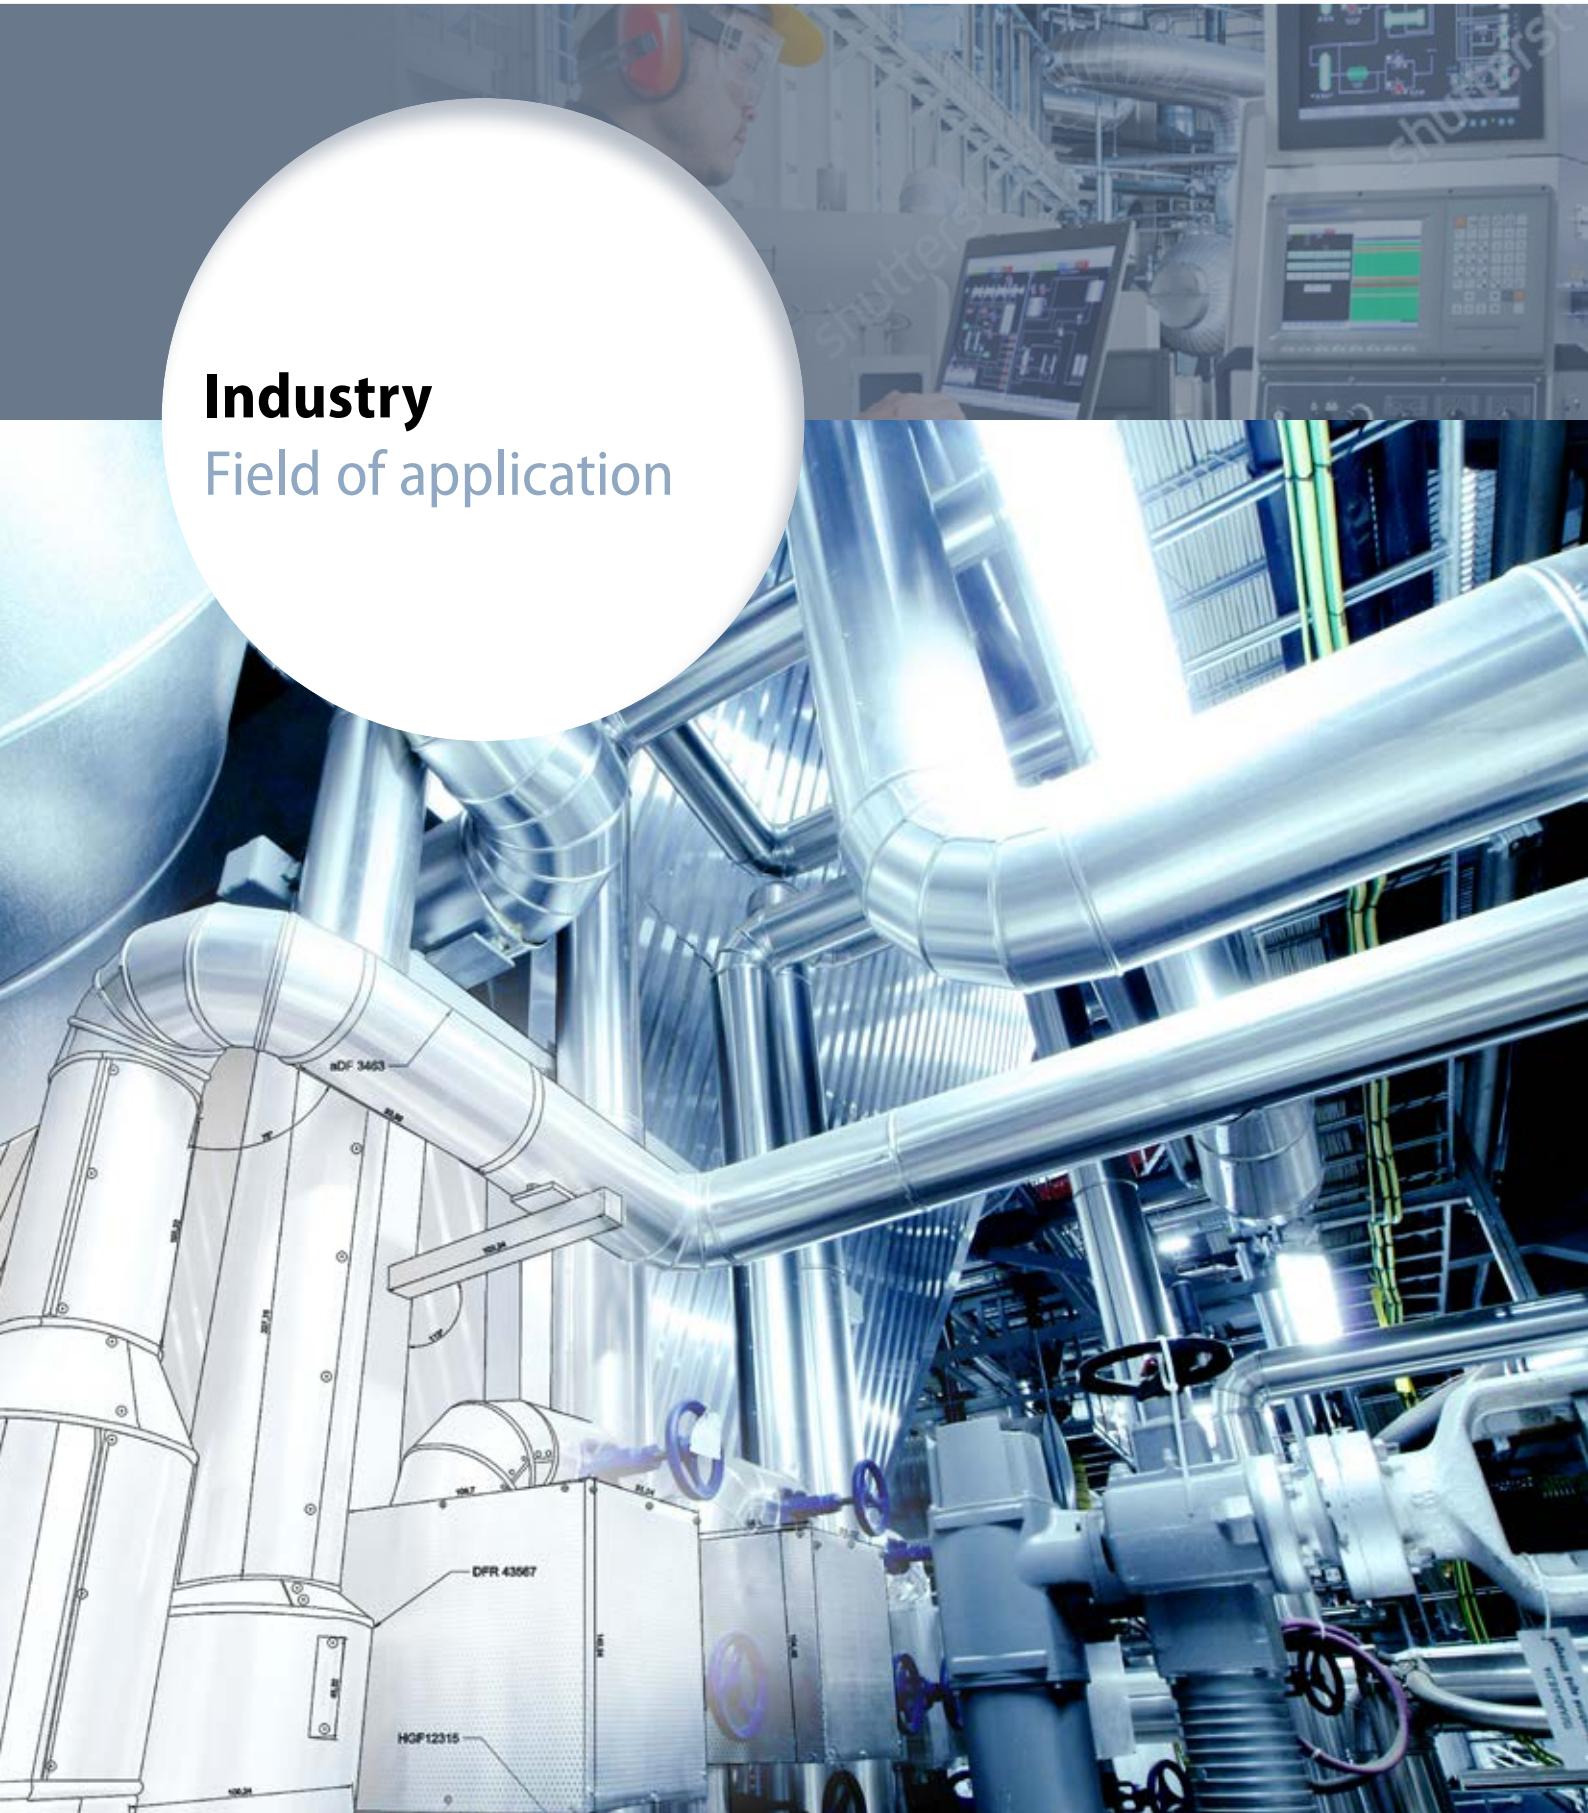

High-quality generic IT networks form the backbone of the business in research & development, banks, insurance companies, universities, hospitals, hotels, airports and many other sectors, providing smooth operation and financial success.

The smart use of fiber optics and copper data technologies for the backbone and horizontal wiring to the user enables cost-effective networking of standard resources such as PCs and printers, with an extension to IP telephony and multimedia applications. Other applications, such as Power-over-Ethernet (PoE), support the powering of devices such as web cameras, wireless LAN access points, IP phones and laptops via the copper data cabling.

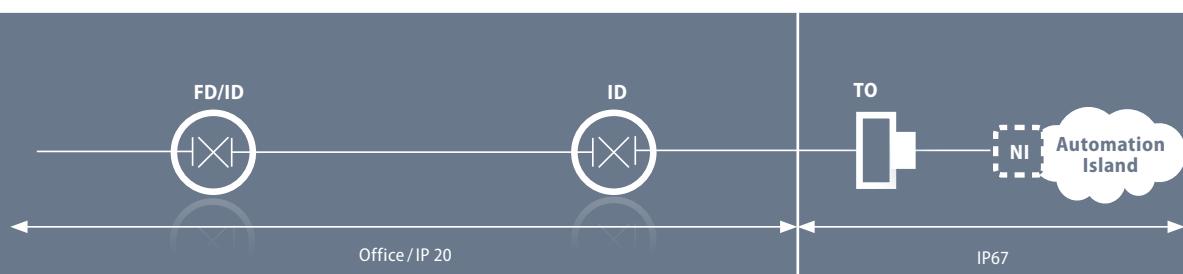

These structured, generic communication cable systems meet both the international and European standards set by ISO/IEC 11801 and DIN EN 50173.

General requirements

Industrial IT cabling

Uniform IT platforms are increasingly used to connect different worlds

The boundaries between office and industrial cabling are becoming increasingly indistinct. The need for sales departments to receive current production data or to engage in short-term planning of production processes requires a uniform group-wide IT platform.

Manufacturers of automation and control equipment demand consistent, future-proofed international standards, while users are looking for secure investments. Ever more applications in production processes are implemented via Ethernet, reducing maintenance and operating costs. Existing standards and applications, such as PROFINET, will still need support in the years to come.

This results in a requirement for a clear separation between "application" and "network", which can only be achieved using a uniform platform as a base, combined with generic communication cabling, in both office and manufacturing environments. This requirement has been standardised in the EN 50173-1, -2, -3 series, and in the international standards ISO/IEC11801 and ISO/IEC 24702.

A consistent extension of the use of generic cabling offers enormous advantages, e.g. the

- Reduction in the assortment of products
- Deployment and distribution of mass-produced products
- Standardisation of acceptance measurements
- Reduction in training costs
- Easy trouble-shooting
- Simplification of network operation, maintenance and documentation.

It is frequently observed these days that the transmission requirements in industrial environments are less challenging than those in the office area. This fact can be exploited to cut costs without compromising long-term system readiness. Since cable laying is expensive, and an expansion of technical requirements would lead to unnecessary additional costs, we recommend that data cables should be selected to meet the highest standards (Category 7 or above).

Connection technology can be limited to the necessary minimum, however, if an intelligent adaptation to changes in circumstances is possible both in terms of pathway technologies and the structural and/or production-related environment.

MICE concept

Classification of environmental conditions

MICE	Requirement/level	Requirement/level	Requirement/level
	1	2	3
M Mechanical	M ₁	M ₂	M ₃
I Ingress	I ₁	I ₂	I ₃
C Climatic/Chemical	C ₁	C ₂	C ₃
E Electromagnetic	E ₁	E ₂	E ₃

The environmental factor

As well as the electrical or optical transmission channel, the different conditions in office and industrial settings mean that the environmental factor also plays an important role.

These environmental conditions are described using four basic characteristics:

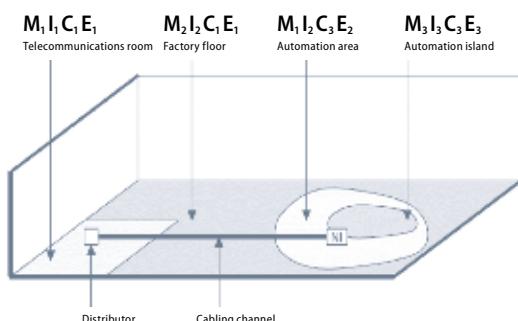

- | | |
|--------------------------|----------------------------------|
| Mechanical | Mechanical properties |
| Ingress | Ingress protection properties |
| Climatic/Chemical | Climatic and chemical properties |
| Electromagnetic | Electromagnetic properties |

The MICE classification can vary over the length of the transmission link, for example mechanical loads in the office environment are fairly low and the ingress of liquids or significant climatic and chemical loads are equally unlikely. The conditions in buildings used for industrial purposes, on the other hand, are harsher:

Mechanical loads as well as the risk of ingress of dust, dirt and liquids; high, quickly changing temperatures; solar radiation and corrosive substances can affect the components. Electromagnetic interference also influences the data communication.

The four MICE criteria are broken down into different parameters, each with three levels.

- **Office environment** M₁/I₁/C₁/E₁
- **Factory environment (light duty)** M₂/I₂/C₂/E₂
- **Machine environment (heavy duty)** M₃/I₃/C₃/E₃

DataCenter

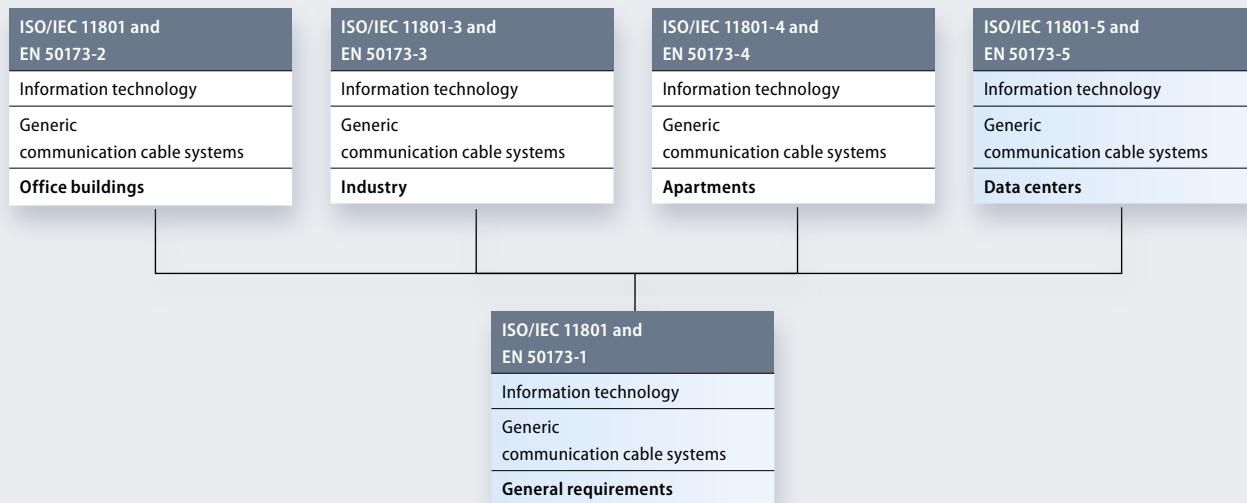

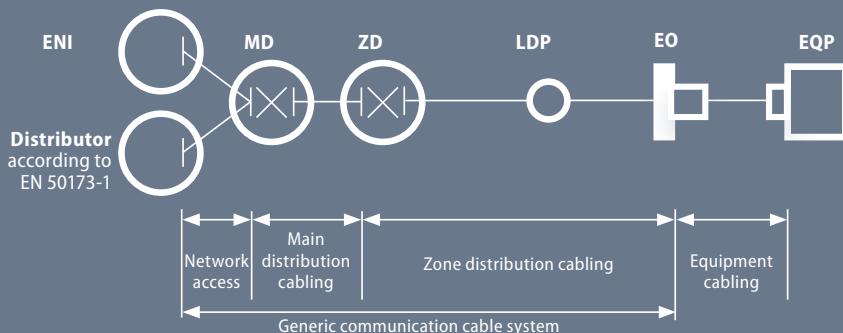

Field of application

Generic cabling in data centers

Structure of a generic communication cable system

ENI	External interface
MD	Main distributor
ZD	Zone distributor
LDP	Local distribution point (optional)
EO	Device connection
EQP	Application-specific transmission equipment

Structure

The maximum extension is 2,000 metres. In data centers the main distribution cabling is frequently designed using fiber optic technology, while in smaller networks the external network interface (ENI) is connected directly to the zone distributor (ZD). The standards describe various models for flexible and fixed connections in and between the subsystems.

According to ISO/IEC 11801-5, cabling of the main and zone distribution must meet the requirements of Class E_A for copper technology and transmission classes OF-300, OF-500 and OF-2000 for FO technology as a minimum.

Standards

Generic communication cable systems are defined in the standards EN 50173-1 and ISO/IEC 11801.

In addition, specific requirements for data centers are defined in EN 50173-5 and ISO/IEC 11801-5.

The cabling used in data centers consists of three subsystems:

- **Network access cabling**
- **Main distribution cabling**
- **Zone distribution cabling**

Requirements and solutions

Fast – high-quality – cost-optimised

DataCenter

The data center – the heart of a business – controls production and administrative processes. Failure here can have catastrophic consequences, so the availability of a data center must be guaranteed more or less round the clock. The cabling system is a key factor in terms of operational reliability.

Performance requirements for modern data centers

- Maximum availability, zero downtime → max. reliability
- Short installation times
- Maximum performance
- Minimal space requirement – high packing density
- Cost efficiency
- Environmental compatibility – Green IT

The diverse requirements for data centers cannot be considered separately. Optimising environmental performance can lead to a reduction in cost, for example. Investing in industrially pre-assembled components usually involves higher costs but enables installation and testing times to be reduced, thereby cutting the costs incurred by downtime.

→ High quality

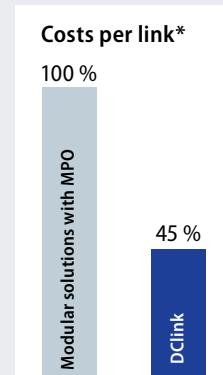

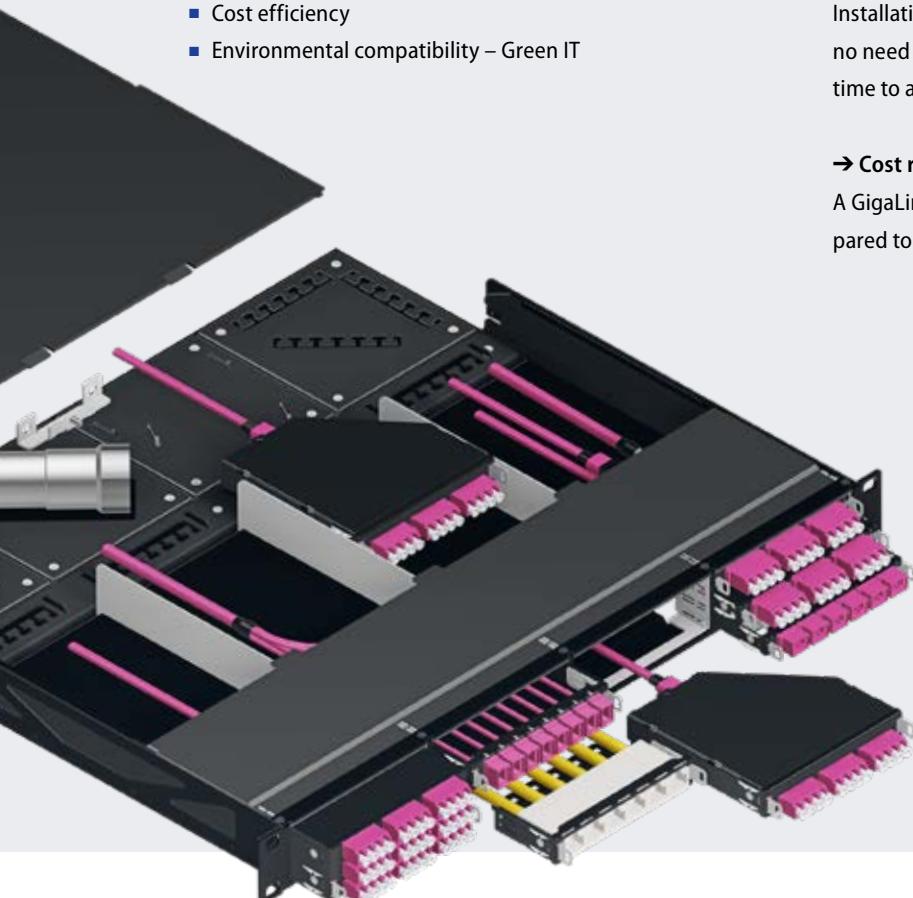

With quality testing carried out at the factory, LEONI products offer built-in performance and safety.

→ Minimise downtime

Installation and commissioning take a very short time, with no need for special tools or assembly skills. This keeps downtime to a minimum.

→ Cost reduction

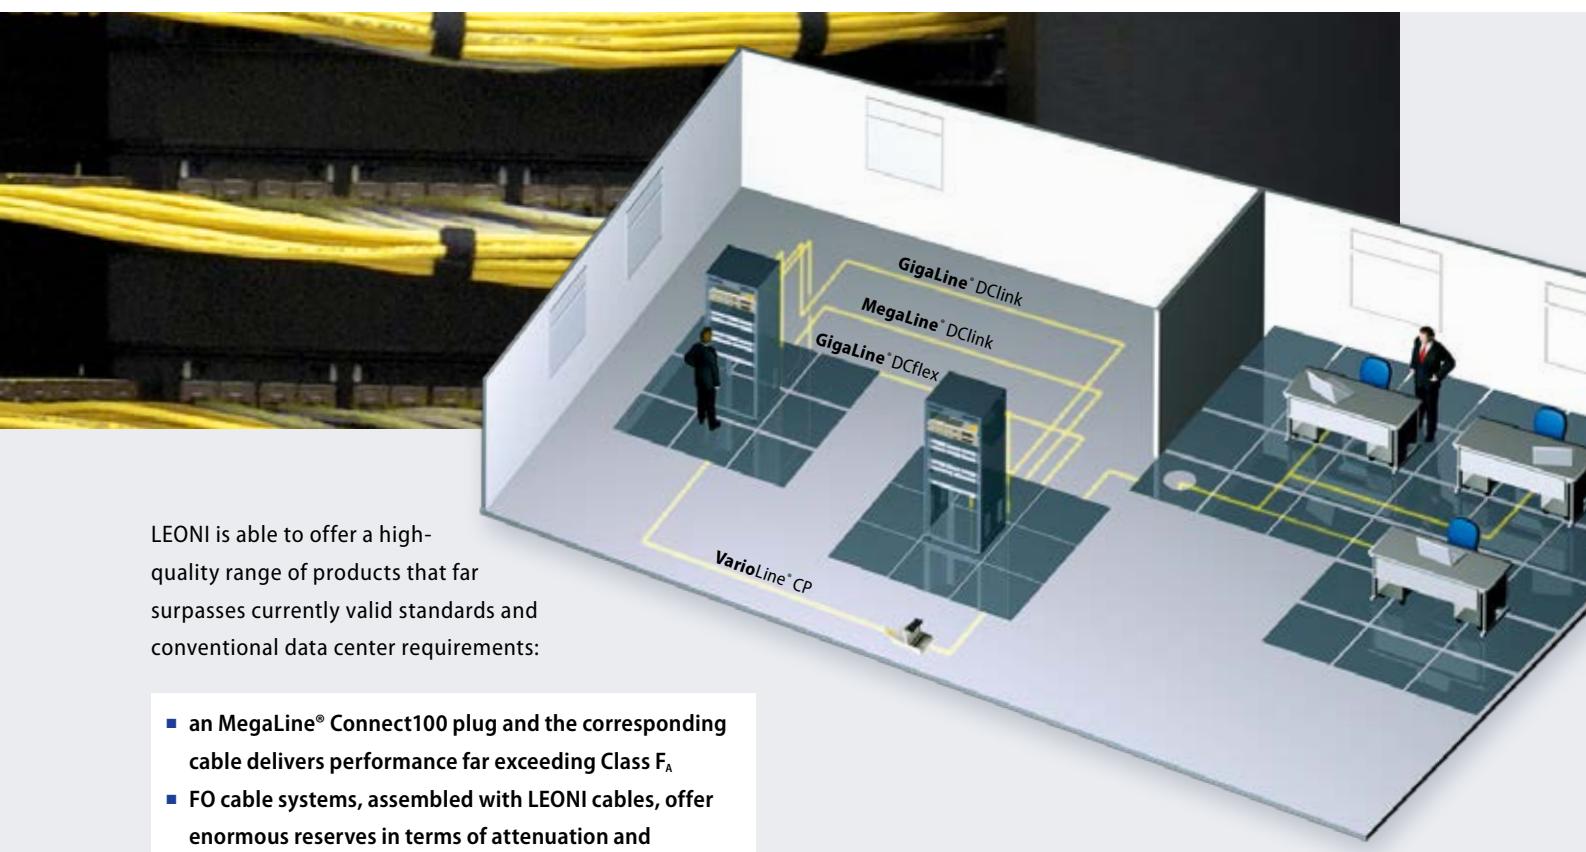

A GigaLine® DLink offers cost savings of up to 55 % as compared to conventional modular systems using MPO connectivity.

* Example:
Link length: 30 m,
Fibers: 24 x OS2,
Connector: LC Duplex

Benefits

Exceed all requirements with LEONI

LEONI is able to offer a high-quality range of products that far surpasses currently valid standards and conventional data center requirements:

- an **MegaLine® Connect100** plug and the corresponding cable delivers performance far exceeding Class F_A
- FO cable systems, assembled with LEONI cables, offer enormous reserves in terms of attenuation and bandwidth

Installation

Plug & Play solutions for copper and FO applications comprise ready-to-use factory-fitted links and the VarioLine® DClink frame (19", 1 RU) to hold the DClink modules. Once the link has been installed, the DClink modules are simply inserted from the rear until they audibly click into place.

DClink system solutions

DClink allows the use of FO, copper or mixed set-ups in different categories. This makes on-site assembly entirely superfluous. You can also remove the modules again very easily using a simple unlocking tool.

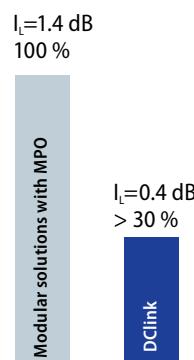

Environmentally aware cabling

Environmentally sound materials and production methods, the possibility of recycling or ecologically viable recovery and, last but not least, the reusability of products if required – these are the factors that guarantee maximum environmental compatibility. Cables and components are free of hazardous substances.

Optimising attenuation

A GigaLine® DClink offers up to 70 % less attenuation than conventional modular systems using MPO connectivity.

Attenuation per link*

* Example:
Link length: 30 m,
Fibers: 24 x OS2,
Connector: LC Duplex
